VOLVME CXXXIII

JVLY-DEC 1927

THE BVILDER

AN : ILLUSTRATED : WEEKLY JOURNAL : FOR : THE : ARCHITECT : AND : CONSTRUCTOR.

"EVERY man's proper mansion-house, and home, being the theater of his hospitality, the seate of selfe-fruition, the comfortablest part of his own life, the noblest of his sonne's inheritance, a kind of private princedome, nay, to the possessors thereof, an epitome of the whole world, may well deserve, by these attributes, according to the degree of the master, to be decently and delightfully adorned." - - - - - - - -

"Architecture can want no commendation, where there are noble men, or noble mindes."

—SIR HENRY WOTTON.

"OUR English word TO BUILD is the Anglo-Saxon Bȳlȝan, to confirm, to establish, to make firm and sure and fast, to consolidate, to strengthen; and is applicable to all other things as well as to dwelling-places."—DIVERSIONS OF PURLEY. - - - - -

"ALWAYS be ready to speak your mind, and a base man will avoid you."—WILLIAM BLAKE. - -

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXXIII. No. 4404. JULY 1, 1927.

CONFERENCE COMMENTS

FROM one point of view, and that an important one, the London Conference of the Royal Institute of British Architects can be considered an undoubted success, as all such meetings should be of those engaged in a common calling. The benefit to be derived from the meeting at one time and in one place of artists or professional men who freely discuss their aims and ambitions or the problems which interest them must be apparent to all, and it is no doubt with this as the principal object that so many so-called conferences are now held in various parts of the country. Usually the arrangements which are made provide a serious business programme of papers and discussions, followed by more definitely social proceedings of visits and such-like ; and though sometimes the business side of such meetings may be unduly prolonged it may be almost entirely eliminated, as we have seen in the Conference of the Royal Institute of British Architects referred to above, and the social side developed to meet the wishes of members. Much can be said, no doubt, in support of the one programme or the other, but speaking for ourselves we think the greater benefit is to be derived from conferences which are held for the discussion of certain definite questions than those which are of a more particularly social character.

There are few professional bodies which are not deeply interested in one or more questions affecting them individually and collectively, and even to-day there are seriously-minded members who believe in the value of public discussion in the general interest. We are aware, on the contrary, that it is the fashion to decry such discussions and to assert that the interest taken in them is shown by the attendances which are, it is alleged, generally meagre and disappointing. This can certainly be said of the business meeting of the R.I.B.A. Conference on Tuesday last week, when the subject discussed, "The Work of the R.I.B.A.," did not induce more members of the Institute to attend than are often seen at an ordinary fortnightly meeting, though whether this was due to a full knowledge of the subject or unusual activity of architects in professional work we are unable to say. The fact is, we believe, that a well-thought-out business programme is as necessary to the complete success of these conferences, if busy men are to be induced to attend and take them seriously, as a varied social programme, and they are likely to fail in numbers and general interest, especially in a great city like London, where there are so many counter-attractions, unless the members are made to realise that the conference of the society they belong to is of importance and is worth making some sacrifice to support. The success of a London conference of a professional body is no doubt difficult to achieve, and though the officials may work as whole-heartedly and as enthusiastically as have the officials of the R.I.B.A., the very special support of those who practise in and around the city is required, and if it is lacking then the full measure of the success which should attend the weeks of preparation by hard-working men is unattainable. But apart from the discouragement of hard-working officials, a conference which is not well attended by home members may produce a good deal of criticism from provincial members, and one, at least, of the objects of the meeting may be frustrated at the very start. A provincial member who has come from a distance is inclined to interpret the absence of leading home members as a lack of interest. The London Conference of Architects was fairly well attended by provincial men and their ladies, but we noted with regret the absence of many London members who usually take an interest in Institute affairs, and it was unfortunate that their other engagements should have synchronised with several of the conference functions.

An admirable social programme of receptions and visits was arranged, and some of them were an unqualified success, but the attendances were rarely what they should have been and probably would have been but for the unusually inclement weather of a March-like June. The garden party at Hampton Court was a particularly pleasant function, the stately buildings and lovely gardens looking their best in the spring-like sunshine ; and the visits to Knole Park, Sevenoaks, and Penshurst, to Eton and Windsor, were much enjoyed, as in fact were all the visits, except where they were unpleasantly interrupted or utterly spoilt by the weather, and even then the cheerfulness in adversity which is a characteristic of so many architects made itself felt.

The banquet on Friday last week, which really brought the Conference to a close, though there were visits on Saturday to Canterbury and Cambridge, will long be remembered by those who were present, if only because of some admirable speeches and the tribute of two ex-Viceroys of India and three ex-Governors-General of South Africa to Sir Herbert Baker, A.R.A., who was presented with the Royal Gold Medal for the promotion of architecture. The dinner was an unqualified success, with a full attendance of a number of distinguished guests. Mr. Guy Dawber, whose absence during the Conference in consequence of indisposition was so much regretted, was able to be present, and in his felicitous words he reflected the pleasurable feelings which the occasion evoked. The noblemen who spoke in support of the toast to Sir Herbert Baker kept closely to their subject, which cannot be said of all speakers who are called upon to fulfil similar duties. We might perhaps wish for a stricter time-limit on speeches, for those who had to leave early missed the pleasure of hearing Sir Herbert Baker's response. It may be the President was right in saying at the Banquet that these yearly meetings are not so much for the discussion of matters of deep professional importance as for the purpose of enabling members to meet together as friends, and to draw closer the bonds that unite the profession, but the value of an architectural conference is not limited to the results of professional discussion amongst architects. Beyond all this, could not these conferences do more to give the public a better realisation of the aims and ideas of architects, especially at the present time when there is at least a sign of the recognition of the importance of architecture and good design in everyday life ? With so many undesirable things around us, as the President said,—the dull monotony and ugliness of modern life, the many miserable houses and objects which might just as well be well-proportioned and beautiful—should not the annual conference of an Institute of the power and authority of the R.I.B.A. be made the occasion to demonstrate to the public that the consideration of art in everyday life, as well as the creation of beautiful buildings, is part of the thought and aims of the architect ?

We have no doubt the Conference will have good results, as meetings of this kind cannot fail to quicken the growth of unity and good feeling in the profession. The interchange of opinion, the discussions which inevitably take place between members from all parts of the country relating to experience and practice, cannot fail to promote the spirit of unity and increase the individual store of knowledge ; but while in this way such Conferences have proved their value, we doubt whether the fullest use is made of them or whether it is sufficiently realised how great are the opportunities for promoting the well-being of a profession.

NOTES

Officials and Private Practice. There are obvious limits to the way in which an official architect may occupy himself in private practice whilst in receipt of a considerable emolument from his office, and the case of Sir Frank Baines illustrates this. He was obviously right in resigning his official position.

A Pleasing Recommendation. It will give unfeigned pleasure to his friends and a general feeling of satisfaction in the profession that through the recommendation of the R.I.B.A. of his name and others, the Westminster City Council have received a report from the Chairman of Committee advising the appointment of Mr. A. W. S. Cross as architect for public baths and wash-houses, a highways' depot, a maternity welfare, and rate collector's office, on the Marshall-street and Dufours-place sites. After the unfortunate affair of the new technical institute buildings competition at Manchester, the action of the Institute is especially welcome; it is, indeed, an evidence of broad-mindedness, which is surely one of the best attributes for a great Institute, for we still feel that Mr. Cross was unfairly treated by the Manchester authorities.

Sir Herbert Baker. Those who have followed the published illustrations and speeches which have appeared in support of the honour conferred on Sir Herbert Baker, in presenting him with the Royal Gold Medal, will realise that he has been fortunate both in his opportunities and the way in which he has availed himself of them. Any adequate illustration of all he has done would fill a goodly-sized volume. Since he carried out the charming home in Africa for Cecil Rhodes, a good many years since, he has been appointed to many important commissions, including his great buildings in India and the rebuilding of the Bank of England.

A Defence Union. Probably if it were known that an efficient Defence Union existed for the protection of architects, engineers and surveyors, there would be more hesitation on the part of clients to bring actions for damages against such practitioners. Anyhow, we should expect that the protection which is offered by the Architects', Engineers' and Surveyors' Defence Union would be sought by all who are able to pay the moderate subscription involved in membership. Some of the matters in respect of which members of the professions concerned have been held liable for professional negligence have been in connection (*inter alia*) with damage due to dry rot, misleading advice as to the cost and value of buildings, defects due to faulty design, damage to or encroachment on adjoining premises, etc. The first defence to an action for the recovery of fees is often a claim for damages for alleged professional negligence so that these two grounds for dispute are closely allied. The cost of individual insurance against the risks referred to would be at least three or four times greater than the amount of the subscription to the Union, and it is only by co-operation that the protection and advantages offered can be obtained for so small a subscription. It is the unexpected that happens, and the costs, even in a comparatively small matter, may run into thousands of pounds.

Street Decorations. The lack of quality in our street decorations on carnival occasions was illustrated anew when the King and Queen drove down Regent Street last week. Most of the decorative effects were poor or vulgar, though exceptions might be noted in the display of flowers at Liberty's and Dickins & Jones and Revillon Frères, and the flowers and flags at Swan & Edgar's. A small fee for advice would be a negligible cost, and we have many amongst us today who are able and ready to give it.

Mural Decorations in St. Stephen's. The unveiling by the Prime Minister, on Tuesday, of the eight panels of mural paintings which surround the walls of St. Stephen's Hall, Westminster, completes a scheme of decoration on a large scale which is without parallel in modern art and, indeed, recalls the service rendered by painters during the great period of the Renaissance in Italy. These eight panels—which each measure fifteen feet by ten—all depict scenes in the history of Britain and in

Modern Wall Painting in St. Stephen's, Westminster. Mr. A. K. Lawrence, Artist.

"Queen Elizabeth, the Faerie Queen of her Knights and Merchant Venturers, commissions Sir Walter Raleigh to sail for America and discover new countries, 1584."

Sir Herbert Baker, A.R.A., Architect.

fact may be said to constitute an epitome of our national life, under the general theme and title of "The Building of Britain." These, together with the two mosaics recently unveiled, constitute a worthy scheme of decoration for St. Stephen's Hall, on whose site for more than six centuries stood the Chapel of St. Stephen — from 1547–1834 the Domus of the Commons' House of Parliament. The work is the result of three years' constant co-ordination by artist, historian and layman working towards a common end. The historical aspect of the work was placed in the hands of Sir Henry Newbolt, while for the initiation and carrying through of the scheme, the Speaker, Mr. Whitley, and Mr. Thomas Wilson, Deputy Keeper of Westminster Hall, were responsible. The illustration on page 2, of Mr. A. K. Lawrence's painting of Queen Elizabeth commissioning Raleigh to sail for the Americas to discover new lands, was presented by the Earl of Derby.

The Architectural Aspect.

The paintings are conceived as an epitome of those historical forces which are expressed in the building of the British State, from Alfred the Great to the Union with Scotland. Here are exacting architectural conditions. The artist is called upon for not only the fullest exploitation of his powers, but at the same time the most severe discipline is involved in respect of various factors, namely, structural design, the specific conditions of lighting, a special technique of painting, and, in short, all those limitations governing the theory and practice of great mural painting. The difficult task of controlling and disciplining the artistic forces selected was entrusted to Sir D. Y. Cameron, R.A., and to him, to the artists, Sir Henry Newbolt and the Speaker, the nation, we are certain, owes a great debt.

History of Art.

The suggestion put forward by Sir Robert Witt on the occasion of the annual meeting of the National Art Collections Fund, that there should be more teaching of the history of art, has been followed up by suggestions for a new Diploma for the History of Fine and Applied Art. We confess to a rather apprehensive feeling about this proposal, and the experience of many who have sat under art lecturers concerned with the whole history of art from prehistoric times to the present day has been far from profitable. "Expert" opinion thus further reinforced might become rather a menace to the freedom of the arts, and we should have supposed it would be possible to be informed in all necessary ways without too precise an interpretation of periods, styles, transitions, and all the rest of it. The rather dreary resources of this sort of information are not of much interest outside the lecture hall.

Entrance from Meads, Winchester College Cloister.
Sir Herbert Baker, A.R.A., Architect.

GENERAL NEWS

Architect's Estate.

Mr. Cyril Bazett Tubbs, of Thedden Grange, Alton, Hants, architect (net personalty £3,147) left £7,451.

Lancing College Memorial.

The war memorial at Lancing College—a Gothic architectural cloister, over 100 feet long, in seven bays—was unveiled on Saturday afternoon by Prince Henry.

Mr. Hugh Morgan's Estate.

Mr. Hugh Townshend Morgan, A.R.I.B.A., of New End Square, Hampstead, N.W., and of Gray's Inn Square, W.C., who was killed by an avalanche at Zurs, Austria, on January 1 last, aged 43 years, left £7,804.

Bloomsbury Site.

The purchase of the Bloomsbury site by the University of London from the Duke of Bedford has been completed. The site, including roads, comprises about 11½ acres, and is the site originally bought by the Government for the University and sold back to the Duke in April of last year. The purchase price is £525,000.

Croydon's New Market.

This market, which we illustrated in our last issue, was opened for use on Thursday of last week by the Mayor, Mr. Camden Field, J.P. The ceremony was followed by an informal lunch, given the Greyhound Hotel by Mrs. Cheeseman, at which the Mayor, Mrs. Cheeseman, the donor, and Major F. W. Rees, the architect, were amongst those present.

Chair of Highway Engineering.

The Worshipful Company of Paviors has received an intimation from the Associated Portland Cement Manufacturers, Ltd., and the British Portland Cement Manufacturers, Ltd., that each of these companies has voted a sum of £1,000 towards the fund now being raised by the Paviors' Company for the establishment of the Chair of Highway Engineering at London University.

The Salterio International Competition.

The Salterio International Competition for designs in pure silk, especially for cravats, has been postponed till August 31. Amongst the prizes is a gold medal—presented by the "Enta Nazionale Serico"—offered to those artists whose designs show the most completely the technical qualities required for reproduction in silk. Any information desired can be had from Sig. Guido Cassi, Viale Piave 13, Milan, Italy.

New Keeper of the Royal Academy.

At a General Assembly of Academicians held on Tuesday, Mr. Walter Westley Russell, R.A., was elected Keeper of the Royal Academy. The former Keeper of the Royal Academy was Mr. Charles Sims, R.A., who resigned the position last December on the ground that his absence in the United States prevented him from carrying out his duties to the students.

New Oxford Picture Gallery.

Oxford University has decided to spend £7,000 on a picture gallery. At Congregation a decree has been approved for the completion of the new picture gallery scheme for the Ashmolean Museum. The space for pictures and drawings will be doubled, and a large number of pictures, which owing to lack of space the public have never seen, will be hung. Many valuable collections, it was stated, are destined for the University.

Knighthood for R.A.

The Prime Minister, when unveiling the series of eight mural paintings in St. Stephen's Hall, to which we refer on page 2, in the Houses of Parliament, announced that the King had been pleased to confer a knighthood on Mr. George Clausen, R.A., as representative of the artists who had been engaged in the work. Mr. Clausen has painted a picture depicting the English people reading aloud Wycliffe's English version of the Bible.

The Sixth Road Congress.

Great Britain was represented by Mr. Rees Jeffreys, chairman, the Roads Improvement Association, at the meeting of the permanent International Association of Road Congresses which assembled at Fontainebleau, near Paris, on Saturday. Included in the subjects discussed were the venue and date of the sixth International Road Congress. The fifth, it will be recalled, met at Milan in September, 1926. It is the intention of Mr. Rees Jeffreys to proceed to Germany to ascertain what progress has been made in the lay-out of streets to meet modern traffic conditions. In the opinion of the Roads Improvement Association, it is possible in this country greatly to improve the lay-out of streets, particularly at corners and cross roads, and the location of lamps, refuges and other obstructions to traffic.

L.C.C. and Waterloo Bridge.

When the London County Council reassembled on June 28, at the County Hall, Mr. J. D. Gilbert asked the Chairman of the Improvements Committee whether he could state how long it would be before the engineers appointed by the Government and the Council to consider the proposed new Charing Cross Bridge would be able to report. Sir Percy Simmons replied that he had no information as to how long the engineers would take to prepare their report on the proposed Charing Cross Bridge scheme. It must of necessity take some months. The old Waterloo Bridge was under constant—even daily—examination by the Council's engineers. The expenditure of a great deal of money was not anticipated, although obviously that was dependent upon the length of time which would elapse before work on the reconstruction or replacement of the old bridge commenced.

The Gourlay Memorial.

At Hillfoot, near Glasgow, the memorial-stone of grey granite which has been erected on the grave of the late Charles Gourlay, Professor of Architecture and Building in the Royal Technical College of Glasgow, was unveiled on Sunday. The memorial is of grey granite, simply designed, and bears a bronze medallion of the head of Professor Gourlay. The inscription reads:—"To the memory of Charles Gourlay, B.Sc., F.R.I.B.A., F.S.A. (Scot.), Professor of Architecture and Building in the Royal Technical College, Glasgow, died 30th June, 1926." The memorial is the first item of a scheme of commemoration undertaken by the Royal Technical College Architectural Craftsmen's Society—of which the late Professor Gourlay was the founder—and subscribed to by past students, colleagues, and friends of the professor at home and abroad. The other items in the scheme consist of the placing of a replica of the bronze medallion of head of Professor Gourlay in the Technical College and the endowment of a projected scholarship in architecture and building. The short and simple ceremony at the memorial, which was conducted by the Very Rev. Dr. George H. Morrison, was taken part in by a representative company including Mr. Robert Robertson, vice-chairman of the Governors of the Royal Technical College; Mr. James Lochhead, past-president of the Incorporation of Architects in Scotland; and the principal officials of the Architectural Craftsmen's Society. The members of Professor Gourlay's family who were present were Captain J. Clark Gourlay, his brother, and Mrs. Gourlay; Miss Janie A. Gourlay, his sister; and Miss Chrissie Gourlay, his daughter, who unveiled the memorial.

The bronze medallions were executed by Mr. G. H. Paulin, A.R.S.A., and the memorial was designed by Messrs. W. J. Smith, A.R.I.B.A., A.M.I.Struct.E., F.S.A.(Scot.), and Alexander Cullen, A.R.I.B.A.

COMPETITION NEWS

Pleasure and Recreation Grounds, Bognor.

Bognor Urban District Council invite architects willing to enter for a competition for the lay-out of a piece of land for pleasure and recreation grounds, including (*inter alia*) a boating pool, to submit their names before July 10 to Mr. Joseph Jubb, Clerk to the Council. The designs will be judged by a Fellow of the R.I.B.A.

Ross Housing Scheme.

Members of the Royal Institute of British Architects must not take part in the above competition, because the conditions are not in accordance with the published Regulations of the Royal Institute for Architectural Competitions.

COMPETITIONS OPEN.

Cemetery Chapel, Reading, for Corporation. Open to architects residing or practising in Berks, Bucks or Oxon. Premiums: 50 and 25 guineas. Apply Borough Surveyor, Town Hall, Reading. Deposit, £2 2s. Mr. Charles J. Blomfield, F.R.I.B.A., Assessor, 13, Ashburn-gardens, London, S.W.7, to whom designs have to be sent.	Particulars published in "Builder." April 15	Sending in date. July 1
Edwin Austin Abbey Memorial Scholarships for Mural Painting. Two Minor Scholarships of £125 a year each, and one Major Scholarship of £250 a year. Candidates must not be over 25 and 27 years of age for the respective Scholarships on December 31 preceding the competition. Apply Secretary, Edwin Austin Abbey Memorial Scholarships, Chelsea Lodge 42, Tite-street, S.W.3	June 11 ...	July 12
University Buildings, Western Australia. To cost £150,000. Premiums: £400, £300, £200. Open to British subjects or citizens of U.S.A. Assessors: Professor Leslie Wilkinson, F.R.I.B.A., Mr. A. R. L. Wright, L.R.I.B.A., President Royal Institute of Architects of Western Australia, and Member of University Senate Apply Agent-General for Western Australia, "Savoy House," 115-116, Strand, London, W.C.2, or Australian Trade Commission, 44, Whitehall-street, New York, U.S.A.	Jan. 14 ..	Aug. 23

MEETINGS

Friday, *July* 1.

Architectural Association. Annual Prize Distribution. 3 p.m.

Wednesday, *July* 6.

National Housing and Town-Planning Council.—Conference at City Hall, Cardiff. 11 a.m.

Thursday, *July* 7.

Institution of Electrical Engineers.—Conversazione. At Natural History Museum, South Kensington, S.W.7.

Friday, *July* 8.

Institution of Municipal and County Engineers (South Midland district).—At Wootton Pillinge, Beds. 11 a.m.

Fourteenth-Century Barn as Church.

A fourteenth-century barn, used for hay-carts and cattle fodder at Oxted, Surrey, has been given to the Rev. John Alban, priest-in-charge of St. Peter's Mission, North Sheen, for conversion into a parish church. The barn, its oak pillars and rafters black with age, will be moved from Oxted to a site, surrounded by an orchard, at North Sheen. It is the gift of Mr. Uvedale Lambert, of South Park Farm, Bletchingley, Surrey, who desired to help the Bishop of Southwark's scheme for building 25 churches in his diocese.

Winchester College: the Cloister.

Sir Herbert Baker, A.R.A., Architect.

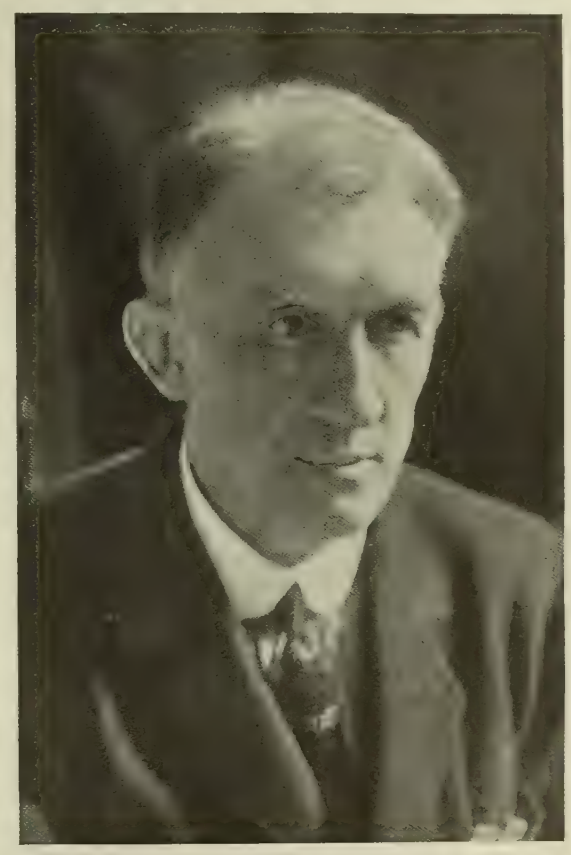
THE R.I.B.A CONFERENCE

THE BANQUET AND PRESENTATION OF ROYAL GOLD MEDAL.

The proceedings of the London Conference of the Royal Institute of British Architects, the programme of which was fully reported to date in the last issue of *The Builder*, were concluded on Friday and Saturday last. On the former day visits were paid to Oxford, where a tour of the colleges was made, while, alternatively, a tour of the North Downs via Guildford was undertaken, which although not made under the most favourable of weather conditions, was much enjoyed. In the evening the Conference banquet was held at the Grand Hall, Hotel Cecil, at which—to the great pleasure of all—Mr. E. Guy Dawber was able to be in the chair. On Saturday the Conference was brought to a successful conclusion with visits to Canterbury and Cambridge, while other members paid visits to the London Museum and the Tate Gallery, under the respective guidance of Messrs. Sydney J. Tatchell and Gilbert H. Jenkins.

Altogether, the various visits made, although not blessed with the fine weather that attended the garden party, were greatly appreciated and enjoyed by all who took part.

The Conference banquet, at which the Royal Gold Medal for Architecture was presented to Sir Herbert Baker, A.R.A., was held at the Hotel Cecil on Friday last. There was a large and distinguished company present, including Mr. E. Guy Dawber, P.R.I.B.A. (in the chair), His Excellency the Italian Ambassador, the Earl of Selborne, Viscount Gladstone, Lord Hardinge of Penshurst, Viscount Chelmsford, Viscount Sumner, Lord Meston, Lord Thomson, Sir Herbert Baker, A.R.A., Sir Frank Dicksee, P.R.A., Sir Newton Moore, Sir George Berry, Sir Frederick Rice, Sir John Marriott, Sir P. Pilditch, Sir Arthur Robinson, Sir Martin Conway, Sir John Burnet, R.A., Sir Banister Fletcher, Sir Arthur Spurgeon, Sir A. Brumwell Thomas, Sir Owen Williams, Professor S. D. Adshead, Mr. A. V. Alexander, M.P., Mr. Louis Ambler, Mr. H. V. Ashley, Mr. Maxwell Ayrton, Major Harry Barnes, Mr. T. P. Bennett, Mr. H. T. Buckland, Mr. L. H. Bucknell, Mr. C. McArthur Butler, Lt.-Col. H. P. Cart de Lafontaine, Mr. Walter Cave, Major H. C. Corlette, Mr. D. M. Cowan, M.P., Col. C. Crookshank, M.P., Mr. W. R. Davidge, Mr. Arthur J. Davis, Mr. Rudolf Dircks, Mr. H. P. Burke Downing, Mr. Vincent Esch, Mr. Cyril A. Farey, Mr. Lawton R. Ford, Mr. J. P. Gardner, M.P., Mr. J. M. Gatti (Chairman of the London County Council), Mr. J. Alfred Gotch, Mr. H. Austen Hall, Mr. E. Stanley Hall, Mr. William Haywood, Mr. P. W. Hubbard, Mr. Gilbert H. Jenkins, Mr. Francis Jones, Mr. Arthur Keen, Mr. E. Bertram Kirby, Mr. Walter Lamb, Dr. E. Graham Little, M.P., Mr. W. J. Locke, Mr. L. Loughter, M.P., the Hon. James McNeill (High Commissioner for the Irish Free State), Mr. T. R. Milburn, Mr. Alan Munby, Mr. John Murray, Mr. F. Winton Newman, Mr. D. Barclay Niven, Mr. E. J. Partridge, Mr. T. Taliesin Rees, Mr. W. Reynolds, — Stephens (President, R.B.S.), Mr. H. D. Searles-Wood, Mr. Louis de Soissons, Mr. L. Sylvester Sullivan, Mr. T. S. Tait, Mr. Walter Tapper, Mr. Sydney Tatchell, Mr. A. F. A. Trehearne, Mr. Raymond Unwin, Mr. William Walcot, Mr. Thomas Wallis, Mr. E. P. Warren, Mr. Michael Waterhouse, Dr. T. Watts, M.P., Lt.-Col. D. Watts-Morgan, M.P., Mr. Maurice Webb, Mr. Herbert A. Welch, Mr. H. H. Wigglesworth, Mr. Percy Worthington, Mr. F. R. Yerbury, and Mr. Ian McAlister (Secretary of the Institute).



Following the loyal toasts, Viscount Sumner, P.C., G.C.B., proposed "The Royal Institute of British Architects." Having proposed the toast, he said, what more was there to say? They all knew the great services the Royal Institute rendered to art and to the country. They knew the services the President rendered to the Institute, and they recorded those services with feelings of reverence and affection. Why should he say more? How many of them, he wondered, straying into that tiny room at the Royal Academy in which works of architectural genius were displayed, had stood for a long time before the representations of various country houses with the name of their President in the corner. How many had wished they had the privilege of living in such a house? He referred to the President's domestic work because he had admired it so often, and spoke without prejudice to works of another character of which he was the author. Those houses possessed very great charm; they were built largely on one floor with one staircase; they appeared to have every advantage in the way of labour-saving. But for the financial era in which we lived, they would undoubtedly be the homes of many generations of country gentlemen; under present conditions and the pressure of death duties, they would probably become homes for incurables. He could only say "Blessed is that fate," for having previously become bankrupt they would all be tempted to become incurables! As to the R.I.B.A., how could he praise that body better than by a judicious reticence when he was addressing so many of its members? He thought a great deal about architecture, but he had very good reasons for being restrained in his references to the subject. Once, in a moment of rashness, he accepted an invitation to deliver an address before the R.I.B.A. in Conduit-street. In the confidence of his heart he said what he thought about modern architecture. He found that his remarks were received with a certain amount of reserve on the part of the audience, which he did not understand at all until he discovered afterwards that the bulk of his audience consisted of the architects of the buildings he had been criticising. Since then he had been very much disposed to keep to himself what he thought about architecture.

In responding to the toast, the President said the Royal Institute of British Architects was playing an important, and they believed an honourable, part in the life of the nation, and they were confident that the growth and the activity they felt all around them in the profession were the heralds of a period of even greater usefulness. The banquet marked the close of the latest of the long series of conferences the Institute had held. Those yearly meetings were not so much for the discussion of matters of deep professional importance as for the purpose of enabling members to meet together as friends and so draw closer the bonds that united the whole profession. That conference had, he thought, done much to achieve that end. Their profession was extraordinarily loyal, singularly free from jealousy, and always ready and willing to work for the common good. He knew of no other body of men who gave such unstinting praise and admiration for any fine and scholarly work of their fellows than did architects. In no other country had the architectural profession attained such authority as had the Royal Institute of British Architects in this country. The Institute guided architectural education in the universities and schools throughout the Empire; it dispensed honours; it ennobled the greatest architects by advising the Sovereign on the award of the Royal Gold Medal; it set the standards of remuneration, of professional conduct and examinations; it governed the procedure of competitions; and it was always ready to help and advise every Government department and local authority whenever its services were asked for. Its activities were spread not only over the British Isles but throughout the whole of the Dominions, and it was the Institute's earnest endeavour to maintain and increase not only the brotherhood and dignity of the profession but the honourable conduct of all those architects who practised it. He often wondered whether people realised the importance of architecture in everyday life, and its effect upon the well-being of the community. When they looked around and saw all the undesirable things, the ugly things, the untidiness, the congestion, the noise, and the absence of dignity in civic life, they could not but realise that all of it, had they but cared enough or exercised sufficient vision, need never have come into being at all. Dismal buildings and mean streets had a singularly damping and dispiriting effect upon those who passed along them. Acres of buildings throughout the countryside testified to the lack of imagination of the builders and designers of those dreary deserts, although it was only fair to say that architects as a whole had not had much to do with them, and it was to the indifference of the public, bred and living amongst such surroundings, that they must attribute much of the taste of to-day. We were a strange people. We built museums and art galleries. We organised societies and guilds for the cultivation of everything connected with the arts, and yet neglected those things that were of equally great importance—the streets and towns and countryside, the things they saw every day and every hour, and which influenced them in body, in mind, and in soul, and which helped to form their outlook on life. Just as in the past century, owing to the rapid advance of industrialism, the towns were swamped with purely materialistic and utilitarian buildings—which they were now at vast expense doing their best to alter and reconstruct—so to-day they were without any protest allowing the beauty of the country, unique in its charm and quiet picturesqueness, to be destroyed by ill-considered and meretricious buildings. It was difficult to understand that people who saw the mischief proceeding so rapidly before their eyes should allow syndicates and building companies to wreck its beauty—a beauty that belonged to everyone, and that no private citizen could claim the right to destroy. When it was too late the nation would realise and deplore that they had lost a heritage from bygone days that could never be replaced. But for all that, he was sure progress was being made. Architecture was slowly though surely making headway to that position of importance it should occupy in the life of every community. He believed that a vast number of people were craving for more orderliness and beauty, for better houses, better buildings, better cities, more open spaces, less disorder and noise, more cheerful and yet more reposeful streets—in short, a more fitting environment for a twentieth-century people. Architecture was so complex to-day that the need for more highly efficient training was greater than it had ever been in the past. It was far more than merely a matter of technical skill in mechanical construction. The architect must be a man of sympathy and imagination whose art must cover the whole range of modern life, including churches, palaces, hospitals, colleges, schools, factories, libraries, and, above all, the house. He had not only to clothe them in perfect form, but he had to build in a practical manner and adapt his work to the needs of everyday life. Above all, he must obtain this without undue expenditure. Buildings spoke to all who passed them by. The voice of the architect was heard by all the world, who had no alternative but to hear. Architects must realise their responsibilities and fit themselves for their task. On the other hand, however much good architecture might be preached and practised by the architect, it would never become a full-flavoured fruit unless it was nourished by the desires and encouragement of the people. He was more than ever hopeful of the future, for more excellent work was being done to-day than ever before. They had only to look around and see the many beautiful buildings being erected in every town and city throughout the country to see that the average standard was much higher. Fifty years ago many buildings now being erected would have been hailed as architectural triumphs, but to-day they were accepted almost without comment. They had a

brotherhood of young architects, the product of school and university training, who were doing most excellent work, and their number was being added to day by day. To the older men some of these new buildings might appear to be too eccentric and startling, but whatever might be said, they were all trying to raise the standard of architecture not only in the towns but throughout the whole of the country. The domestic work of this country stood without an equal in the world for sobriety, beauty and common sense, and the commercial and public buildings ranked with those of any other country in dignity and utility. He had been very proud to have been President of the Royal Institute, which he had always believed in as one of the greatest organisations for the advancement of architecture and the better recognition and education of architects. But not until he became President did he realise how big an affair it was, or what it stood for, not only in Great Britain but throughout the Empire. He was very pleased indeed that he was to be succeeded in office by his old and valued friend, Mr. Walter Tapper, into whose keeping they could safely entrust the welfare of the Institute. That occasion was the one on which the Royal Gold Medal for Architecture was to be presented to one of the most distinguished of living architects. Since its inception in 1848 the medal had been awarded to architects not only in these islands, but also in the United States, Germany, Austria, Italy, Holland, and Sweden. But it was difficult to say to what country the honour was going that evening, for so many countries would claim Sir Herbert Baker as their own. He felt they must class Sir Herbert Baker as an architect of the Empire, and leave it at that. The work of an architect who had been privileged to build in three Continents was of much more than professional significance. Rome and Greece left the impress of their building genius all over the Mediterranean basin, and the psychological influence of those great erections on other peoples had been deep and lasting. In the British Empire we had perhaps thought too little of such influences. They had been too easily content with merely utilitarian building to house their administrations and secretariats. But that was changing. Delhi and Pretoria and Canberra were marking the change.

The Earl of Selborne, K.G., P.C., G.C.M.G., said he was afraid when he landed at Cape Town 22 years ago he had never heard of Mr. Herbert Baker, as he then was, but he was very soon to learn. Soon after landing he was taken to see a house that Mr. Baker had designed for the late Cecil Rhodes, and in which Dr. Jameson was at that time living. He had never seen a house like it before. Its style was entirely new to him. But he was at once struck by its extreme beauty. He was told that it was an adaptation of the old Dutch style of South Africa. From Cape Town he passed to Bloemfontein, and was taken to see the cathedral. It had been a cathedral for a good many years, and was the best the small English community could afford. But at the end of the old building was a new erection, with a plain brick campanile, which he was told had cost the absurdly small sum of £1,500. That plain brick campanile was of sublime proportions, and dominated the whole town and the surrounding country. He asked who designed it, and was told it was the work of Mr. Herbert Baker. He then went to Pretoria, and saw the Government House in course of erection. It was the most beautiful Government House in the Empire, and he was the first Governor-General privileged to live in it. It was built in the same style taken from the old Dutch model, but adapted and improved by genius—and the architect was again Mr. Herbert Baker. Next he went to Johannesburg, and found it a painful experience to go through the suburbs of that city. There were many houses of well-to-do men that were very painful to look at; one would be Classic in design, the next Gothic, the next Chinese, the next Elizabethan, and the next Oriental, while many tried to combine all these styles in one house. He had never in his life seen houses in which so much misplaced and unmeaning ornament existed, or in which there was so much lack of proportion. Three years ago he again visited Johannesburg and went through the new residential quarter. Never had he seen so many delightful homes as had been built since his previous visit. Every one of them was a pleasure to look at. They were built by a number of different architects, but they were all in the style that Mr. Baker had created. If ever a man had put a stamp of domestic architecture on a Continent it was Herbert Baker. While speaking of Sir Herbert Baker's work, he could not omit to mention one of his buildings in England, and that was the War Memorial Cloisters at Winchester College, which commemorated the old Wykehamists who fell in the war. The Cloisters were side by side with the fourteenth century work of William of Wykeham, and the seventeenth-century work of Sir Christopher Wren; the new Cloisters harmonised with both, and were worthy to stand beside the work of those two great masters of the past. He would ask them all to see the War Memorial Cloisters at Winchester College—they would then understand why he said that that building was the finest war memorial in England.

The Rt. Hon. the Earl Buxton, P.C., G.C.M.G., said it did not fall to many men to mark an epoch in architecture, but Sir Herbert Baker had certainly done so in South Africa. When Sir Herbert Baker went to South Africa there was no architecture there at all. But he was determined to alter that state of affairs, and saw in the beautiful houses of the old Dutch families a standard that might be introduced into the architecture of South Africa. Unlike some architects, he did not crave to be completely original; he was quite prepared to accept what had been done in the past and adapt it to modern requirements. His example had revolutionised the architecture of South Africa. Twenty-five years ago, before he went to South Africa, the architecture of that country was about as bad as it could be, but now he did not believe there were better buildings in any part of the world. He had had the pleasure of living in some of Sir Herbert Baker's houses, and he had worked in the impressive Government building at Pretoria, and had nothing but admiration for them. He had left his mark throughout the country, and all who had visited South Africa would feel a debt of gratitude to the architect who had brought about such a wonderful change. Lord Selborne had referred to the War Memorial Cloisters at Winchester College, and had not exaggerated when he said it was the finest war memorial in the country. He (the speaker) would like to say that amongst the many war memorials in France and other battle areas, there was nothing more beautiful, more impressive, or more in keeping than the South African memorial in Delville Wood designed by Sir Herbert Baker.

Sir Herbert Baker, A.R.A.
Recipient of the Royal Gold Medal for Architecture, 1927.

Viscount Gladstone, P.C., G.C.B., G.C.M.G., said Sir Herbert Baker never allowed beauty of design to interfere with comfortable occupancy. One thing that struck him very forcibly was the genius he displayed in adapting his designs to the rough ground and contours and ridges of the veld.

Lord Hardinge of Penshurst, K.G., P.C., G.C.B., G.C.S.I., said he was glad to have an opportunity of expressing, on behalf of himself and the distinguished Government officers and others in India, the appreciation and admiration they all felt for a very great British architect. The declaration of H.M. the King, at the Imperial Durbar in 1911, that the capital of India was to be transferred from Calcutta to Delhi, involved great responsibilities. A site had to be chosen, and, what was more important and difficult, an architect had to be selected. Delhi and the

northern part of India was full of very fine buildings of the Mogul type of architecture denoting the conquest of southern India by the Mohammedans; in southern India was found the Hindoo type of architecture, which was more florid and decorative; while in the cities there was a good deal of British architecture of the Georgian period in the official residences and Government buildings. It seemed to him that in building a new capital city for India an opportunity presented itself for starting a new architecture for India that would combine all the characteristics of the existing styles and which at the same time would appeal to Indians and English alike. A great number of architects were recommended to him as suitable for designing such buildings, including Sir Herbert Baker. He had heard of the buildings Sir Herbert Baker had designed at Pretoria, photographs of which showed him their beauty and dignity and the Dutch influence running throughout the buildings. He was profoundly impressed with these buildings, and decided that Sir Herbert Baker would be the best architect to design the buildings at Delhi. And he was not mistaken. In due course Sir Herbert Baker presented designs for the new Government buildings and important secretariats; the designs stood out in front of all the others submitted, full of dignity, grandeur and administrative suitability, and with a real Indian motif running throughout them. Also, the designs were well within the estimate. Sir Herbert Baker had two other very valuable qualities; he was always up to time with his work, and he was always well within the estimates. When it was completed, he believed Delhi would be one of the finest cities in the world, and he was sure India had been exceptionally fortunate in having two such distinguished architects as Sir Edwin Lutyens and Sir Herbert Baker to design the finest buildings. The buildings Sir Herbert Baker had erected at Delhi were worthy of him and of his great reputation, and he was confident they would be a lasting monument to his ability and skill.

Viscount Chelmsford, P.C., G.C.S.I., G.C.M.G., said he had been connected with Sir Herbert Baker since 1926 either as Viceroy of India, as a Fellow of Winchester, or as a member of the Committee of Lords, and he believed that in stating the fact that he had been connected with Sir Herbert Baker as a client for eleven years without having a single quarrel he was paying the highest tribute that could be paid to a professional man. After Sir Herbert Baker had carried out certain work at Lords, the Committee asked him to design such a prosaic structure as a new grand stand, and those who went to Lords could see how an architect of real distinction could invest a prosaic and utilitarian structure with dignity and even beauty. He thought it must be quite a unique event for five of an architect's biggest clients to meet on such an occasion to speak well of him.

Sir Herbert Baker was then invested by the President with the Royal Gold Medal, and a photograph was taken of a group of which Sir Herbert Baker was the central figure and which included two ex-Viceroys of India (Lord Hardinge and Lord Chelmsford), three ex-Governors-General of South Africa (Lord Selborne, Lord Gladstone, and Lord Buxton), and Mr. Guy Dawber.

In a few words acknowledging the medal, Sir Herbert Baker said what was uppermost in his mind was simply to say "Thank you," but in such a supreme moment in an architect's life he felt it incumbent upon him to make some attempt to express a little of the faith that was in him. It was a very great pleasure indeed to receive the honour at the hands of Mr. Guy Dawber, by whose side in the office of the late Sir Ernest George he learnt so much to inspire him. Particularly he learnt the value of making efficient working drawings, about which he thought there was some doubt in these days of high academic training. He well remembered the drawings made in that office, which showed everything necessary without a single wasted line or

The R.I.B.A. Banquet, Hotel Cecil, W.C., June 24, 1927.

flourish. He also thanked the members, who could not have seen much of his finished work, for the trust they had reposed in him. His thanks were overwhelmingly due to those whom he had had the honour to serve. But his thoughts went farther back to the patrons who begat him. An architect was only the instrument and interpreter of his patron, and the patron was only the interpreter of the spirit of his time. However much the artist might be possessed with the ideal of art for art's sake, his work might be of no consequence if it expressed his unimportant self only and was not inspired by some national influence. The great fortune that came to him was the opportunity of interpreting the spirit of a great man in the distant country to which he emigrated as a young man. So his thoughts went out to Cecil Rhodes. Rhodes was not merely the interpreter of the spirit of the age; he did not merely guide or lead the type-Rhodes was in himself a type. At Oxford, in mining camps, in the solitude of the silent veld, and on the slopes of Table Mountain, he thought out the conception that architecture established, an opinion and an influence—the same conception that Wren had immortalised for England. He held that those who spoilt the face of nature in extracting wealth should atone for the sacrilege with beautiful works of art. After the South African war he said, "This will be one country now, and we must help to make it beautiful." Rhodes was solely animated by the desire to make beautiful homes for the people amongst the beauties of the most beautiful country in the world. Death prevented the full achievement of his conception, but the work was carried on by Lord Milner, his young men from Oxford, and many South Africans, who emulated his example during the period of home building in the Transvaal and Orange Free State. With the help of many capable young architects, the once squalid mining town of Johannesburg was now surrounded by a garden city. He believed the Government buildings in South Africa and India had already been justified to some extent, for the men who governed would tend to live up to the dignity of their habitations. Lastly, he would like to express his thanks to his patrons at home, who had given him great encouragement. It was great encouragement and not criticism that produced works of art.

The toast of "The Guests" was proposed by Mr. Bertram Kirby, O.B.E. (Past President of the Liverpool Architectural Society), who said the R.I.B.A. was a body exercising not merely national, but Imperial jurisdiction.

Sir Martin Conway, F.S.A., F.R.G.S., M.P., and Mr. W. J. Locke, Hon. R.I.B.A., responded. Sir Martin Conway said he claimed that British schools of art led the world, and in saying that he was not expressing his own opinion alone; he was recently in Brussels, assisting in inaugurating an exhibition of British art, and found that the opinion of the Belgian critics, recently back from the Paris Salon, were of the same opinion. They said that British artists suffered from modesty, and that if they would only "spread themselves" a bit the whole of the world would soon understand the eminent position in which British art in all its forms stood to-day. And amongst the arts architecture held a very high position, so that the members of the R.I.B.A. should be a proud body of men. They carried on a great tradition, and the whole of the vast field of the British Empire in which to operate.

Mr. W. J. Locke said that when he joined the Institute thirty years ago, as secretary, the question of registration was a burning question, but now the old enmities were forgotten, the profession was unified, and registration was a matter in the hands of the gods. His ten years with the Institute, in the midst of a great imaginative profession, had been a source of stimulus and inspiration to him in the profession he had left the Institute to adopt.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

St. George's Hall Cenotaph.

Sir,—I have followed with great interest the proceedings connected with the competition for the Liverpool Cenotaph, and my sympathies are entirely with the architects of the city in their most reasonable request that a model should be erected, so that its effect might be judged before it is translated into stone.

St. George's Hall is a national possession, the admiration of all architects and intelligent laymen throughout the Empire, and the greatest care should be taken that nothing be placed near it to mar in any way its beauty, or detract from its noble proportions.

So many mistakes have been made in the past by building committees acting in a hasty and ill-considered way, even on the advice of their experts, that it would be lamentable if, for want of more care and forethought, Liverpool should stultify itself by erecting a memorial which might not only be regretted, but resented, by its citizens in future generations.

E. Guy Dawber.

Maddox-street, W.1.

Sir,—One can easily sympathise with and support the architects of Liverpool in their anxiety lest a permanent mistake rather than an experiment should be made.

The relation of the scale of the area of the "place" and of the grandest peristyle in England to the relatively little cenotaph cannot be felt with certainty; perhaps any result of trials may only be an uncertain success.

This is manifestly a case in which a model capable of trial adjustments as to height as well as to position and points of view should be offered, that critics may be stilled and promoters satisfied.

It should be added that a length of time should be granted to each experimental position to impart confidence to opinion. We so often grow to like situations, the novelty of which is apt to offend that conservatism which is elemental to artistic notion.

It should be recalled that the Cenotaph in Whitehall was but a temporary model until its position was manifested as not only just but popular.

London.

Statutory Examination for District Surveyors.

Sir,—In answer to your correspondent's letter, signed "A Would-be Candidate," the statutory examination, being a test of experience as well as knowledge, the information required on the application form is necessary, and there is no difficulty in filling up the form if the candidate has had opportunities of gaining experience in building construction, without which it is impossible to administer the Building Acts.

The oral examination gives the best opportunity of judging whether the candidate has such knowledge and experience of building construction as to make him able to administer the Building Acts.

The following is the nature of the examination which your correspondent considers is not up to date. I fail to see where it requires modernising:—

1. The materials most in use in building; their strength under various stresses, their excellences, defects, weight, decay, and other properties, and the indications of their being of good or bad quality. The rough methods of testing them on the spot. The bonding of masonry and brickwork, use of mortar and cement, framing of carpentry, and the testing of trusses and timber girders.

2. The loads and stresses affecting structures and the modes of estimating them and calculating arches and the different parts of timber, reinforced concrete, and steel structures; especially such rapid modes of calculating as can be employed on the spot readily.

3. Cast iron, wrought iron and steel. The design, testing and fixing of constructional iron and steel work.

4. Foundations in various kinds of soil, and precautions to be taken in digging them; expedients when the bottom is bad or under water. The risks of accident due to interference with foundations after they have been put in, or to increasing the load on them. The foundations of high chimney shafts. Indications of the failure of foundations.

5. Usual defects in construction and materials. Decay of structures. Neglected and dangerous structures. Shoring, underpinning, repair of walls, tying buildings together, forming openings in existing walls. The force of storms and stability of high structures.

6. The behaviour of various materials and modes of construction with reference to fire. Fire-resisting construction. Precautions necessary in heating and lighting buildings. Precautions to be taken in the storage of water.

7. The London Building Act of 1894, and all amendments of 1898, 1905, 1908 and 1909, and the by-laws in force; and the ordinary procedure thereunder, including the mode of valuing a party wall.

8. Defects or deficiencies in plans for a proposed building.

In addition, a graphic subject is set, when the candidate is given five hours to produce a design. The subject set requires an intimate knowledge of the Building Acts and general design and construction. The candidate is also tested on his ability to read a drawing and indicate the points that are not in accordance with the Building Acts and regulations.

The questions are not published because this examination is one in which "cramming" is particularly to be avoided, and anyone with a practical knowledge of building construction should be able to pass. It is a qualifying examination which is open to all who have such knowledge, and no other qualification, such as membership of any society or institution, is required.

H. D. Searles-Wood,
Chairman of the
R.I.B.A. Statutory Examiners.

Acquisition of Chiswick House and Grounds.

Sir,—After considering the Electricity Generating Station Bill for twelve days, the Select Committee of the House of Commons has concluded the inquiry by passing the measure. Thus the acquisition of Lord Burlington's famous Chiswick villa and beautiful grounds, laid out by William Kent, is now assured. This not only will prove a distinct gain to the neighbourhood of Chiswick, but beyond a doubt must become momentous among the amenities of the environs of London at large. The collapse of the fortuitous opposition was fortunate, and, as I pointed out in your pages, "the more the project was discussed, the more unanimous must be the verdict in favour of the Council's programme."

The Council's considerable foresight induced me to make a wholehearted endeavour to support their spirit of enterprise. If, however, I may be permitted to offer a note of warning, which my experience dictates, let me say, in the influential pages of *The Builder* (what I have already expressed elsewhere), that when the time comes to deal with this capital example of late English Renaissance architecture, it is to be hoped the Brentford and Chiswick Council will supplement their good sense by engaging an expert to advise and superintend any needful work of adapting this historic property.

If doubtful whom to employ, my considered suggestion is that the President of the Royal Institute of British Architects should be asked to advise as to a suitable architect. In this I am assured of your support.

Maurice B. Adams, F.R.I.B.A. (retired).

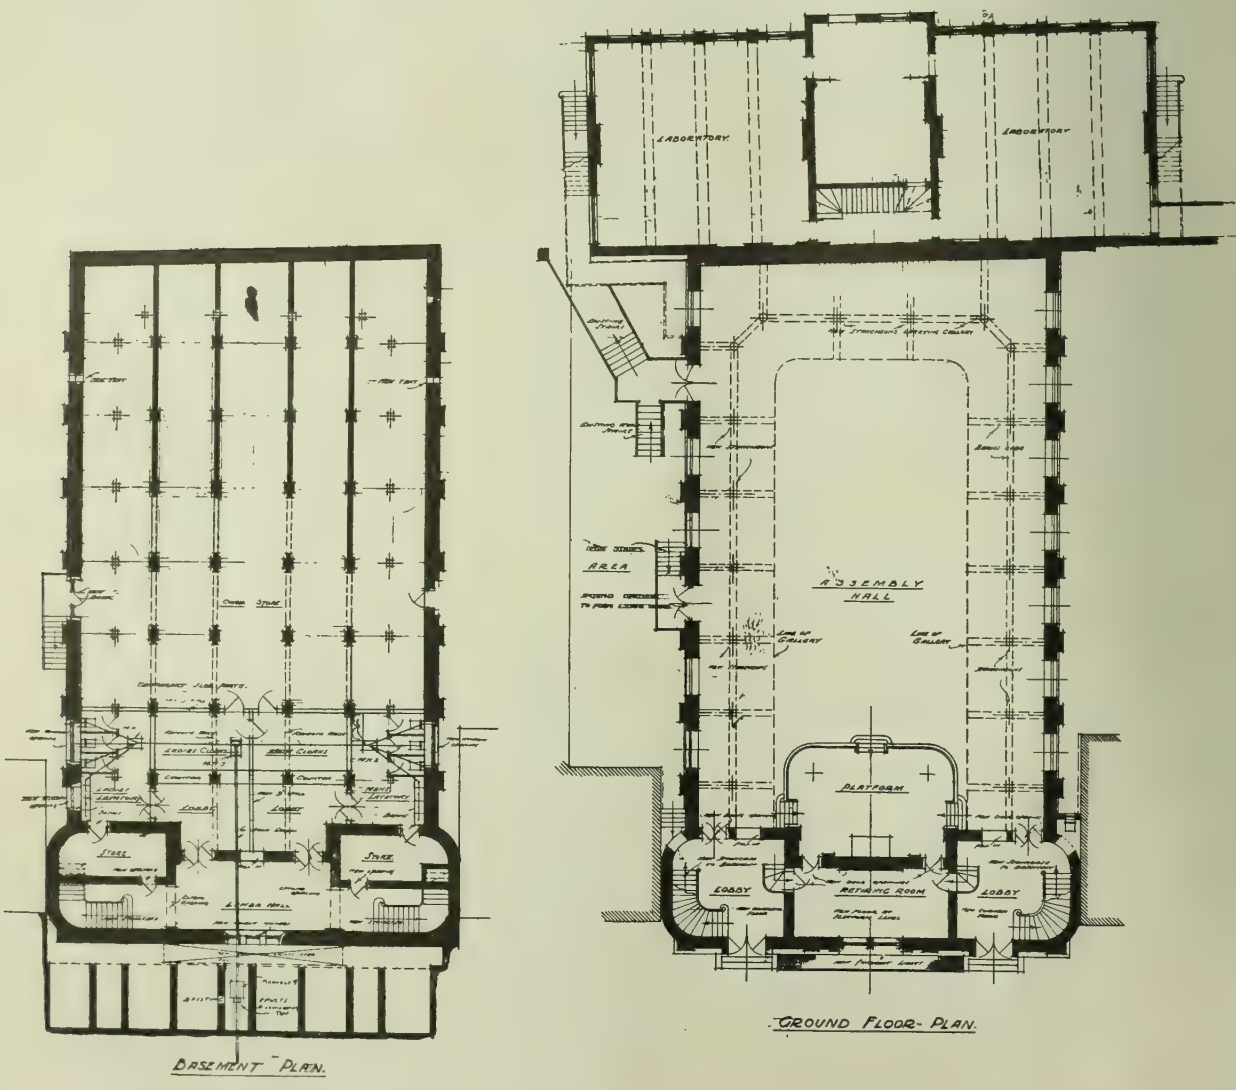
Great Hall, University College.

This building, originally All Saints' Church, Gordon-square, was built from designs by Professor Donaldson in the year 1846. From that date until 1905, when it was deconsecrated, it formed a branch of the Parish Church. In 1914 it was taken over by University College; the galleries and fittings were removed, and the body of the structure was used by the College for military purposes. After the War, and from early in the year 1919 until June, 1926, the Hall was used for examinations and general assemblies. About this time a scheme was projected to create a memorial to those members of University College and the Medical School who had lost their lives during hostilities. It was then decided that the memorial should be embodied in the reconstruction of the church to the purposes of an Assembly Hall, which the College badly needed. The funds already collected by the War Memorial Committee were increased by a general appeal to the public, and further subscriptions having been received, the work of reconstruction was started in July, 1926.



One of the conditions of the reconstruction imposed by the Ecclesiastical Commissioners involved the removal of the cupola on the east front, as well as all details associated with the previous status of the building as a church. It was found on investigation that a basement could be formed beneath the hall by excavating and by underpinning the brick piers supporting the existing floor. This gave increased accommodation for a public crush hall, cloak rooms, lavatories, battery room and storage, reached by two new staircases from the vestibules on either side of the main front. The internal remodelling included the construction of galleries of reinforced concrete and steel. With regard to these features, the position of the stanchions allows for an arrangement of aisles without undue loss of main floor space. The galleries have a continuous balustrade with vertical supports and soffits panelled in oak. The side and end walls of the hall beneath the galleries are also panelled in oak. Among other items, the existing deal floor was taken up and replaced by a new oak floor; the niche forming a proscenium at the east end of the building has been retained as a focal point. As built originally, the interior was comparatively plain, with a plaster ceiling; this ceiling has been removed and a coffered ceiling constructed to accord with the framing of the original roof. The main aim has been to incorporate all existing features of the fabric.

The colour scheme has been determined by the choice of materials, for example, light oak for the galleries and the panelling, stone for the walls and marbling for the niche; the reconstructed ceiling is tinted the colour of cedar. Another interesting feature is the movable platform, which opens on to a retiring room at the back. All the fittings are of bronze, and the names of those who fell in the war have been incised on the panels beneath the galleries.

The architects were Messrs. Richardson & Gill, FF.R.I.B.A. Mr. Collins, of the Department of Engineering, undertook the structural engineering; Mr. Barker was responsible for the heating and ventilation, and Professor Clinton for the lighting. The acoustics of the hall have been improved after investigations made by the architects and Mr. Richardson, of the Department of Acoustics. The general contractors were Messrs. Leslie & Co., of Kensington-square; Mr. Percy Bentham was the sculptor; Messrs. Harvey & Co. and the Morris Bronze Foundry contracted for the metal work from the architects' designs.

THE REGISTRATION BILL IN PARLIAMENT

Sir Edmund Turton, M.P., gave evidence on Thursday of last week before the Select Committee of the House of Commons appointed to consider the Architects (Registration) Bill. He submitted a precis of evidence which, it is understood, embodied the following points:—

The Architects (Registration) Bill had been carefully considered by a special Committee of the Association, whose unanimous conclusion—approved with equal unanimity by the Executive Council—was that, while there might well be a need for the protection of the general public from persons possessing little or no architectural ability, no such necessity existed in the case of the local authorities, who should therefore be entirely excepted from the measure, presumably by the following amendment to Clause 20 thereof:—

Clause 20, *page* 8, *line* 13,

After "Council" insert "and the provisions of this Act shall not apply to any person when performing any of the duties or functions of or connected with any office held by him under any local authority."

No doubt this amendment would require to be followed by a definition of the term "local authority," but there were ample precedents for such a definition.

The reason for this view, so far as the county councils were concerned, was that these bodies, comprising as they did capable and eminent elected representatives from all walks of life, and possessed of full knowledge of the requirements of their areas, were quite able to decide for themselves, without any extraneous assistance, what officials were necessary to enable them to discharge efficiently the functions which Parliament had imposed upon them, and what the qualifications of such officials should be. As regarded the smaller authorities, the Association was not, of course, entitled to speak on their behalf, but it was believed to be true to say that those authorities in many cases were unable to afford to employ fully qualified architects for work which could be, and was, quite well performed by their engineers and surveyors. In any case, the present was not the time to impose additional expense upon any authority.

The foregoing observations related to the Bill as it now stands, but the Association had naturally given careful consideration to the suggestion made, on the Second Reading and during the course of the proceedings before the Select Committee, to the effect that the term "Registered Architect" should be substituted for that of "Architect."

It would appear that, assuming circumstances to remain as they were to-day, this proposed amendment removed the objections of the county councils, but the Association were not prepared to make any such assumption. On the contrary, they did not find it difficult to visualise that the present Bill, as thus amended, might be regarded, either now or hereafter, as a first step on the part of those who desired to make the architectural profession a close corporation, and that at some future date an attempt might be made to obtain further legislation for the purpose of imposing additional restrictions in regard to the performance of architectural work.

Finally, the Association wished to refer to an observation made by Major Barnes during the proceedings before the Select Committee on May 24th to the effect, as the Association understood it, that the local authorities and their engineers apparently desired that the latter should be able to call themselves "Registered Architects" without the necessity of registration. So far as the Association was aware, the foregoing observation did not accurately reflect the attitude of county officials, whose only desire was to be left alone to perform the duties which they had in the past been accustomed to undertake on behalf of their authorities, and it certainly did not represent the intentions of the county councils.

Sir A. Hopkinson: For ordinary work you take your own staff, but from time to time for good reasons you wish to go outside your staff for special work for a county hall or a gallery, etc.?—Witness: Yes.

Will you kindly point out in the amended Bill anything that will interfere with that?—Clause 11. That is an extremely wide clause.

Do you see anything in that clause which interferes with your free hand?—Yes. Under this clause there would be a very great danger in using your building surveyor or your clerk to the Agricultural Committee.

Which words interfere with your liberty?—The words "or takes or uses the name, title, style or description implying that he is a registered person."

If you employ a surveyor who is not a registered architect how does that clause interfere with him?

The Witness: We know perfectly well that this is only the thin end of the wedge. This will be a trade union, one of the strongest ones—worse than the lawyers for drawing us in. We have suffered and we are not going to suffer any more.

The Chairman: So far you have been unable to reply.

Sir M. Macdonald: May I ask that you suggest to the questioner that to get a definite answer the witness might couple Clauses 11 and 12.

Sir A. Hopkinson: I think the witness might well be able to take care of himself.

The Witness: Clause 12 does not arise with the county councils.

The Chairman: May I take it that Sir Arthur asked you this question, and so far you are unable to give him a definite reply.—I have given him such answer as I can.

Sir A. Hopkinson: Do you know that useful work is being done by municipal authorities in providing architectural education?—Yes.

The results have been decidedly beneficial in producing competent people?—Yes.

Is it not desirable that there should be some mark given to those who have come through the regular course of architecture?—Possibly.

You do not think it undesirable to prevent people who have not gone through that course of instruction taking that form?—Yes.

Mr. P. J. Spencer, B.A., then gave evidence on behalf of the Institute of Builders. He submitted a precis of evidence which it is understood contained the following points:—

In 1927 the Royal Institute of British Architects promoted a Registration Bill, under which, if successful, the Royal Institute of British Architects could (through the influence it could exert) become a statutory body parallel to or in supersession of the Board of Education and of the local education authorities. In the second edition of the Bill, the promoters included in the proposed Board of Architectural Education one representative of the Institute of Builders without their knowledge.

In this action the promoters recognise the interest of building education in architectural education: the natural link between design and execution. But the recognition is ineffective in its expression, disproportionate to its importance and ineffective in the extent of its expression.

The Institute of Builders gladly acknowledges the achievements and the services of the Royal Institute of British Architects to the cause of architectural education, with these qualifications:—

(i) It believes they may have tended towards narrowing architectural expression.

(ii) It believes it is a chronological mistake if education in design is placed before education in construction.

(iii) It believes it is an economic mistake to regard design as being of superior importance to construction.

(iv) It believes that the production of good and economic building rests upon the equal and concurrent educational development of the various units of the building industry, and that the emphasis of architectural education in the schools may have been to some extent at the expense of education for the executive and administrative units of the building industry.

(v) It believes that the conception of building education as nothing more than education in one or more of the building crafts (which conception is still very prevalent) is partly due to the attitude of architecture towards building and the preponderating architectural influence.

(vi) The Institute of Builders does not imagine the building industry to be without blame in the neglect of building education, but it is anxious that nothing shall be done towards the statutory consolidation of an order of things which is not yet generally felt to be altogether in the public interest, especially in view of the industry's awakening interest in the need for education in the science of building.

It is clearly in the general interests of the public and of the special interests of the building industry that the unqualified practitioner in architecture should be discouraged. In this matter the Institute of Builders has a parallel interest and objective in "Building" to that of the promoting body in "Architecture." It was with much regret it found itself in opposition upon this Bill to a body of equal antiquity with similar aims—a body with whom it has had a long and harmonious association in the common field of building. The Institute of Builders would not place or attempt to place a barrier to the fair and sound development of an educational movement in the interests of another unit of the building industry and (through it) of the building public.

The Institute of Builders therefore welcomes the decision reluctantly adopted by the promoting body to discard the principle of compulsion in the Bill. The Institute of Builders, however, is anxious that the Bill should be in harmony with the evidence, and to this end submits the following criticisms:—

Clause 2.—It is a defect in the Bill and a source of anxiety that "architect" is not defined.

Clause 3 (i) and (ii).—Major Barnes has stated a case for the recognition of the Council of the promoting body as the registration authority. He sets up a parallel with the Law Society and rejects a parallel with the medical profession. On the contrary, there seems no close parallel in this matter between the solicitor and the architect: a strong parallel between medicine and architecture. We may escape the solicitor and his practice of the law all our lives: we can scarcely escape the architect and his practice of architecture. A solicitor does not make the law: the architect does make architecture. We can no more escape medicine and the medical profession than we can escape architecture and the architectural profession. The medical profession make medical science: the architectural profession make architectural art. Architecture is not a separate interest. It is inseparable in its expression from its co-operative interests which together make up the building industry. The Registration Authority should therefore be independent of the control or undue influence of any vested interest of the nature of a professional protection association, and truly representative of effective and affected interests.

The machinery adumbrated in the Bill suggests no good reason why the Registration Authority should not be a:—

"Board of Architectural Examination and Registration," departments of which should be:—

(i) "Board of Examination."
(ii) "Board of Registration."
(iii) "Board of Disciplinary Control."

Clause 4.—It is considered this matter should be in the hands of the proposed "Board of Architectural Examination and Registration."

Clause 5 (1).—It is considered the registration authority should be the proposed

"Board of Registration," acting through the proposed "Board of Architectural Examination and Registration."

It should not be possible for the successful student and others to acquire the hallmark of registration and the advantage of advertisement as "registered architect" without a period of practical experience in a suitable subordinate capacity.

It is felt that neither the public nor the building industry should pay for an architect's first practical experiments, as they will if he is recognised by a statutory authority as qualified to practise immediately upon gaining his diploma or upon passing the prescribed examination.

Clause 5 (2).—Unless the architect and his function are defined, it is difficult to see how this Admission Committee is to function, or, alternatively, how it will avoid heavy cost to the public and to builders through its questionable "admissions" or heavy expense to large numbers of persons through its questionable "rejections." Its first duty will be to define "architect" if the Bill does not do it.

Clause 6 (1) *and* (2).—If the Board of Architectural Education is a representative and responsible body, there seems no sound reason why the council should prescribe qualifications for registration. *Section* (2).—This section throws a doubt upon whether the "Board of Architectural Education" will function at all. It is considered there should be no doubt in this matter.

Together, the sections (1) and (2) disclose indecision in the minds of the promoting body about the qualifications to be prescribed. They suggest there may be other qualifications besides examination. If any, it would be more satisfactory for them to be stated.

Section 1.—A responsible Examining Board should be a suitable fee-receiving authority.

Section 2.—The proposal to recognise the promoting body's final examination for exemption purposes emphasises the danger of vesting registration authority in any other than an independent, truly representative and responsible body. This clause (6) would give to the promoting authority at any unduly protective or selfish period of its history the opportunity to enlist architects to their membership to their own consolidation and advantage as a professional protection association, or, alternatively, to reduce recruitment to the ranks of their profession, to the financial advantage of their members—whether the economic situation suggested it to be wise to discourage or to encourage youth to pursue an architectural vocation.

Major Barnes has said the promoting body would like to have more competition in the market. They may; their successors may not. The Bill should not leave this matter open to exploitation.

It is submitted this clause (6) should make it clear that the proposed "Board of Examination" will set and mark the examination and fix its pass standard, in accordance with the conditions laid down by the proposed "Board of Architectural Examination and Registration," with whom the ultimate control should rest.

Clause 7 (1).—It is submitted that the Discipline Committee should be a responsible committee—acting for confirmation and promulgation purposes through the proposed "Board of Architectural Examination and Registration"—and known as the "Board of Disciplinary Control."

Clause 7 (2).—There should be provision of machinery in this clause for complainants to set the proposed board in motion by complaint and statement of case to the proposed "Board of Architectural Examination and Registration."

There is no appreciation of other interests in the proposed composition of the Discipline Committee.

To secure evidence and fair hearing, it is considered important that quantity surveyors, builders and the general public should be represented on the proposed "Board of Disciplinary Control," which should not in its balance contain the possibility of an overwhelming vote in favour of the particular interest concerned.

Clause 8.—Under these proposals this matter would be at the discretion of the proposed "Board of Architectural Examination and Registration."

Clause 9.—There is no provision for redress for refusal to remove the name of an architect unwilling to remain on the register.

Clause 10.—The provision for recourse only to the High Court would seem likely to operate harshly against the small practitioner. The above remark on Clause 9 also applies here.

Clause 11.—As a drafting point, the term "registered person" might better be "registered architect."

Clouse 12.—This clause appears to be unnecessary and may lead to the idea that to be safe in this matter an architect must be registered. There is already a penalty under Clause 11.

Clause 13.—Under these proposals, this business would be dealt with by the proposed "Board of Architectural Examination and Registration."

Clause 15.—Under these proposals, prosecutions would be instituted by the proposed "Board of Disciplinary Control" through the proposed "Board of Architectural Examination and Registration." Presumably, "prosecutions" would be of such a nature as to warrant their being initiated at the discretion of the public authority and conducted at the public expense (if any) in excess of the surplus funds of the proposed "Board of Architectural Examination and Registration."

Clause 16.—It is submitted that all regulations under this Clause (16) should be under the control and at the discretion of the proposed "Board of Architectural Examination and Registration."

The approach to the Privy Council via the Council of the promoting body keeps the control and the regulations in the hands of the promoting body. These criticisms would be avoided by adopting the proposed "Board of Architectural Examination and Registration," and its machinery.

It is important that the media of publication of proposed regulations should be specific and generally read by interested parties: that the committee(s) of the Privy Council to whom matters of reference will go should be stated: and that there should be provision for right of approach to these committee(s) through the Privy Council by any relevant interest, for the purpose of promoting alterations or modifications in the regulations. *Clauses et seq.* Under these proposals, the "Council" would read the proposed "Board of Architectural Examination and Registration."

Clause 20.—The same objection is noted here as in Clause 16. It is felt that the approval of the Council of the promoting body should not be interposed between any professional member or any body seeking inclusion within the operation of this Bill and the Privy Council.

First Schedule.—The Institute of Builders submits that this schedule should reflect in its composition and in its balance:—

(*a*) An appreciation of architectural expression as a team job; that architecture is inseparable from its co-operative units, and stultified without their equally developed aid.

(*b*) The right of the several interests contributing towards a common educational fund to fair representation upon a board of educational control, which under this Bill will be in a position to influence educational expenditure and direction.

The Institute of Builders cannot admit in the interests of the building public or of the building industry the principles that:—

(*a*) Local education authorities may be superseded or unduly influenced by a statutory Board of Architecture.

(*b*) The Board of Education may be superseded or unduly influenced by a statutory Board of Architecture.

(*c*) Architectural education can be advanced without serious disadvantage unless there is an equal and concurrent advance in the executive and administrative side of architecture-building.

(*d*) Universities in receipt of grants from the public purse should be represented upon a Board of Architectural Education unless the inseparable interest of building is similarly represented.

(*e*) Technical institutions in receipt of similar grants should be represented upon a Board of Architectural Education unless the interest of building is similarly represented.

(*f*) There should be representation in architectural interests from the Board of Education, the Headmasters' Conference, etc., without an equal representation of other units of the industry, to ensure reasonable regard to their equal interests in the common educational fund for expenditure in the common field of "Building."

(*g*) The proposed Board, which will in any event influence the expenditure of public money, should be unduly weighted with any one of a compound of interests.

The Institute of Builders is not insensitive to the special technical requirements of architectural education. These special requirements, however, rise from a common foundation. The schedule should not provide in its composition an opportunity for the architectural interest to acquire an undue share of that foundation. It should not provide an opportunity for the common educational fund to be directed unduly towards the special requirements of one interest.

It is not proposed that the First Schedule should be recast to deprive architecture of a proper control of architectural practice of or proper effect in the special needs of architectural education.

It is further proposed that the controlling authority (the proposed "Board of Architectural Examination and Registration") should be substituted for the First Schedule; nominated by recognised bodies and be adequately representative of co-operative interests in architectural education and practice.

Also it is proposed:—

(*a*) That the proposed "Board of Examination" should be a committee of the above body.

(*b*) That the proposed "Board of Disciplinary Control" should be another committee of the above body, containing in its full composition adequate representation of all interests, co-operative with architecture, which may be affected.

In reply to Sir A. Hopkinson, the witness said he thought that architecture and building had a common foundation up to a certain point, after which each specialised in a different direction.

Col Moore: I gather your objection is that there is unnecessary power in the hands of the R.I.B.A.?—That is the fundamental objection.

Sir A. Hopkinson: Would it mend matters to increase the representation of builders and others?—We would like to see a firm representation of the bodies relating to building.

Mr. Hirst: In what proportion should the various authorities interested in building be represented upon the registration authority?—I am not prepared to answer that question off-hand.

The Chairman: This is, of course, an Architects Registration Bill and not a building society registration Bill. You have no objection to the Bill as far as it promotes registration of architects?—No, not at all.

You would like to see the R.I.B.A. dropped as an entity?—As a controlling element.

The Committee adjourned.

On Tuesday last, when the Committee met again, the first witnesses called were Mr. W. G. Percy, of the Faculty of Architects and Surveyors, and Mr. H. B. Whitfield, the General Secretary of the Faculty. The witnesses submitted a précis of evidence, which will be given in our next issue.

ILLUSTRATIONS

(*Continued from page* 10.)

Leith Town Hall Competition.

We illustrate this week the second and third premiated designs in this competition, full details of which were published in our last issue, as well as the design placed first.

Government House and Union Buildings, Pretoria.

Government House, Pretoria, the home of the Governor-General, shows what a South African house is like when money has not to be too carefully counted. The architect was Sir Herbert Baker, A.R.A., the designer of the Union Buildings, where the administrative work of the Government is carried on. Both buildings are perched on very high ground, the site having in each case to be cleared of boulders and stones, and, for the gardens, the soil was carried up load by load. Although exposed to full sunshine, both buildings are full of coolness and charm, each in different ways. Government House is more spacious and dignified as seen from the inside than from without. There is abundant room for entertaining, yet it is homelike and comfortable, and the grounds grow every year more delightful. The grounds surrounding Union Buildings fall away in terraces, from which the best views of the city are to be had, and the drive up to these gardens is a favourite evening outing.

Woolwich and District Memorial Hospital.

We give this week another view of this hospital, illustrated fully and described in *The Builder* of March 11. The architects were Messrs. William A. Pite, Son and Fairweather.

Architecture at Delhi and Winchester.

We give this week views of Winchester College Memorial Cloisters, the work of Sir Herbert Baker, A.R.A. In addition, a view of the new Government Buildings, Delhi, from the air. The Secretariat is shown in the foreground, and to the right the Legislative Building. For these Sir Herbert Baker was also responsible.

Wandle Court Estate Development.

Wandle Court is situated in that part of Beddington which is rapidly altering in character. The estate has been carefully laid out to preserve the trees, and many of the gardens will have well-established fruit trees. The removal of the outbuildings and garden walls provided a large number of very fine old bricks, and these have been used in the new cottages and give a very pleasing effect. The mansion has been converted into flats, and a good space of garden has been left for the use of the tenants. The architects for the cottages and lay-out were Messrs. Allen and Potter, F.R.I.B.A., MM.T.P.I., 11, Arundel-street, Strand, W.C.2. The contractor for the roads and sewers was Mr. E. Streeter, 59, Leslie Park-road, Croydon, and for the houses Messrs. William Mason and Son, Ltd., 150, Woodhouse-lane, Leeds.

Business Premises : Henrietta-street

The perspective view shows the Henrietta-street front of a block to be erected for Messrs. Debenhams, Ltd., which is on an island site surrounded by Henrietta-street, Wimpole-street, Wigmore-street and Welbeck-street. The portion existing in Wigmore-street, built about 20 years ago, is the only part which will remain and be embodied in the new scheme. The main entrance is in Henrietta-street, with subsidiary entrances in the other streets, with lifts and staircases adjacent thereto to the upper floors. The building will have sub-basement, basement, ground and five floors over, and will be of skeleton steelwork construction throughout with fireproof floors and roofs. This block will be connected in the sub-basement and basement with Messrs. Marshall and Snelgrove's premises in Oxford-street.

SOCIETIES AND INSTITUTIONS

R.I.B.A.

At a general meeting of the Royal Institute of British Architects, held on Monday, June 20, 1927, the following members were elected:—As Fellows (20): C. H. E. Bridgen, F. Clemes, Major W. N. Couldrey, B. M. Goodwin, W. F. Granger, Colonel A. E. Kirk, O.B.E., J. R. Leathart, H. A. Porter, R. G. Roberts, A. Silcock, T. B. M. Wightman, J. R. Young, J. Bevan, B. Brentford, P. R. Fincher, R. C. Fry, J. G. Johnson, W. Marchment, M. A. Shute, J. Vermont. As Associates (20): D. H. Beaty-Pownall, Miss K. O. Brayshaw, F. B. R. Brown, A. D. R. Cowley, R. W. Elder, L. P. Ellicott, R. C. Frith, Miss J. M. Greig, R. G. Grice, Captain A. J. Hobbs, G. A. Jellicoe, H. A. Johnson, Miss A. F. Jones, C. H. Short, Alison Sleigh, E. R. Taylor, A. C. Todd, G. E. Warburton, F. J. Watson, J. B. Wride. As Hon. Associates: David George Hogarth, C.M.G., M.A., D.Litt., Hon.Litt.D.(Cantab.).

The Intermediate Examination qualifying for election as Student R.I.B.A. was held in London from May 20 to 26, and in Manchester from May 20 to 25. Of the 85 candidates examined, 30 passed and 55 were relegated. The successful candidates are as follows, the names being given in order of merit as placed by the examiners:—

A. L. Hall.	W. S. Hartley.
H. H. Ford.	H. M. Hedges.
E. D. Lyons.	F. S. King.
F. H. Carr.	G. C. Lane.
E. Thompson.	H. R. Lane.
T. N. Cartwright.	G. W. North.
E. J. Hartland.	H. Parker.
C. T. Penn.	S. S. Reuben.
R. H. Mungeam.	A. E. Ridout.
C. E. Pearson.	G. H. Shepherd.
K. J. Cooper.	A. Smith.
E. L. Crosby.	S. H. S. Stableford.
C. H. Evans.	L. Tattersfield.
A. H. Gale.	R. Vaughan.
E. A. Grove.	E. J. White.

Attention is called to the fact that the Council of the R.I.B.A. have decided to exclude from the List of Examinations recognised for the Probationership after December 31, 1928, the Junior (Honours) Local Examinations conducted under the authority of any University in the British Empire.

The Council have also decided that History and Geography shall be made alternative subjects in the list of subjects required to be covered by the Certificates accepted in support of applications for registration as Probationer. The revised list of subjects is:

English Composition.

Elementary Mathematics (Arithmetic, Algebra, Geometry).

Mechanics or Physics or Higher Mathematics, or Chemistry.

History or Geography.

One Language other than English.

Rome Scholarship and R.I.B.A. (Henry Jarvis) Studentship for 1927.

On the recommendation of the Faculty of Architecture of the British School at Rome, the Commissioners of 1851 have awarded the Rome Scholarship in Architecture for 1927 to Mr. R. F. Cummings, Student R.I.B.A., of the School of Architecture, the Architectural Association; and on the recommendation of the same body, the R.I.B.A. (Henry Jarvis) Studentship has been awarded to Mr. H. T. Dyer, Student R.I.B.A., of the Bartlett School of Architecture, London.

On the recommendation of the Faculty of Engraving, the Rome Scholarship in Engraving for 1927 has been awarded to Mr. Frederick G. Austin, aged 25 years, a student of the Royal College of Art, and formerly of the Leicester College of Arts. The works executed in the final competitions for the above-mentioned Scholarships will be exhibited in October next at the Imperial Gallery of Art, together with the work done meanwhile in the final competitions for the Rome Scholarships in Decorative Painting and Sculpture.

OBITUARY

Colonel R. W. Edis.

It is with deep regret we record the death of Colonel Sir R. W. Edis, who died on Thursday of last week at the age of 88. The son of Robert Edis, of Huntingdon, he was educated at Aldenham, and later joined the Architectural Association, of which he later became president—a distinction he held for two years, and he was also formerly a Fellow and Member of Council of the Royal Institute of British Architects. On its formation in 1859 he joined the Artists' Volunteer Corps, commanded them for 20 years after the retirement of Lord Leighton, and then became hon. colonel. Not a few amusing stories were current about Col. Edis' conduct when commanding the Artists' Volunteer Corps, which he conducted with much distinction. One evening, at Banbury, on the 1885 excursion of the Architectural Association, a discussion occurred respecting the relative merits of modern town buildings. Feeling ran high, whereupon the ever-congenial Irishman, the late John Loftus Robinson, R.H.A., growing very excited, rushed out of the room, delivering as he went a parthian shot, exclaimed: "Ye have got no architect in England worthy of the name—no, not one," as he slammed the door. Opening it again, he said: "Yes, it is true you do possess *one* architect—*Colonel Edis*!" Colonel Edis travelled much on the Continent, making architectural drawings and in his practice he took part in the revival of red brick and the "Queen Anne" style characteristic of the last decades of the last century. Colonel Edis was formerly a member of the L.C.C., and was D.L. and J.P. for Norfolk. He was created C.B. in 1902 and K.B.E. in 1919. Among his works were the Conservative Club, Glasgow; Great Central Railway Hotel, Marylebone; Constitutional Club in Northumberland-avenue; Junior Constitutional and Badminton Clubs, Piccadilly; Library in Middle Temple; Extensions of G. F. Bodley's original School Board premises on the Thames Embankment for the L.C.C. Education Department (the first enlargements there were done by E. R. Robson); two Bond-street Art Galleries; Lea Side House (in red brick), Kemp Town, Brighton; Ballroom, Sandringham, and additions to York Cottage, as well as several country houses. He published in 1881 "Decoration and Furniture of Town Houses" (Cantor Lectures before the Royal Society of Arts, 1880), amplified and enlarged, which was illustrated by Mr. Maurice B. Adams, A.R.I.B.A.

ST. PAUL'S ECCLESIOLOGICAL SOCIETY.

On Saturday, June 18, a visit was paid to Christ Church, Streatham Hill, to inspect the interior decorations which are being carried out entirely in oil colours by a band of voluntary workers of the parish, under the direction of Mr. A. E. Henderson, F.S.A., R.B.A., L.R.I.B.A. The party was welcomed by the vicar, the Rev. R. P. E. Cheesman, M.A., who gave a short account of the history of the church, after which the sacristan described the English ritual and the vestments used. He was followed by Mr. Henderson, who has travelled extensively in Eastern and Southern Europe and gained a wide experience of church design and decoration. One of the chief features is a triptych behind the High Altar; the painting on the panels represents the Adoration of the Lamb in a totally different form from that usually depicted, yet in a traditional manner and highly finished. The walls of the Sacrament Chapel have been elaborately coloured with bands of decoration and a procession of Saints. The south aisle is treated in a somewhat similar manner, but is less ornate. The lower nave arches are being painted with scrollwork interlaced with smaller detail. The work is reminiscent of the Palermo and Monreale art, with its multitude of patterns, rather than that of the south of France.

THE WEEK IN PARLIAMENT

Westminster, *Wednesday.*

The Case of Sir Frank Baines.

Lord Fermoy asked the Under-Secretary of State for the Home Office, as representing the First Commissioner of Works, whether he was aware that civil servants in the Office of Works had undertaken work for private undertakings; whether he would state the magnitude of the contracts involved; and whether he was satisfied that the work would not interfere with the public duties of the civil servants involved.

Captain Hacking said that Lord Fermoy no doubt had in mind the case of Sir Frank Baines and the Imperial Chemical Industries, Ltd., referred to in answers given to Mr. R. Morrison, on May 26. He would like to take the opportunity of saying that no reflection rests on Sir Frank Baines in this connection. He undertook the work in question for Imperial Chemical Industries, Ltd., in good faith, after reporting the matter to the proper branch of the Department, which did not fully realise at the time the magnitude of the operation, and consequently offered no objection. The undertaking had eventually proved to be on a very large scale, involving an outlay of some £870,000. The First Commissioner had anxiously sought a solution of the difficulty by way of Sir Frank Baines's withdrawal from his outside undertaking; but Sir Frank, on account of obligations to the company, had not felt at liberty to take that course, and the company on their side had, in fact, declined to release him. He was therefore retiring on pension from the service on or about September 1st next, but the First Commissioner hoped that it might still be possible to secure his assistance in a part-time capacity in connection with the work of restoring the Houses of Parliament.

Stonehenge.

Lt.-Commander Kenworthy asked if the First Commissioner of Works was aware that land occupied by a Government aerodrome during the war near to Stonehenge, and, since its sale to private individuals, used for pig breeding, was again on the market for sale, and whether the Office of Works would consider purchasing the land adjacent to Stonehenge, in order to preserve the amenities of this monument for all time to the people of the country.

Captain Hacking said the First Commissioner understood that the land, which was occupied by the Government during the war but never owned by them, was now for sale. He would regard it as a calamity if the surroundings of Stonehenge were disfigured in the manner suggested, but he regretted that, apart from financial considerations, his Department had no power under the Ancient Monuments Act to purchase land surrounding monuments for the protection of their amenities. The entrance fees to Stonehenge produced on the average £1,400 a year.

In a further reply, Captain Hacking said the matter was very largely one of finance, and if Lt.-Commander Kenworthy knew of anyone who was especially interested in work of this sort, or if he would induce some newspaper in the country to start a fund to acquire this land, the Office of Works would give him full support and all the assistance within their power.

Import of Bricks.

Sir K. Wood informed Mr. Viant that statistics of the annual production of bricks were not available, but it was estimated that 5,424 millions were manufactured in Great Britain during 1925. The numbers imported into Great Britain and Northern Ireland in 1926 were 229 millions. The approximate amount of cement manufactured in Great Britain for 1926 was 3,800,000 tons, while 330,584 tons were imported.

Rural Housing.

Mr. Chamberlain informed Mr. Hurd that 70 rural district councils had so far been declared local authorities under the Housing (Rural Workers) Act.

Cement.

Mr. Dennison asked the Minister of Health what was the average amount of cement used in the building of a subsidy house; how much foreign cement had been used during the 12 months ending May in the building of subsidy houses; how much cheaper per ton was the foreign cement compared with Scotch manufactured cement; and would he consider the advisability of withholding the subsidy where foreign cement was used.

Sir K. Wood said it was estimated that, on an average, about 2½ tons of cement would be required in the construction of a brick subsidy house in cases where cement was used. He had no information as to the quantity of foreign cement used in the building of subsidy houses. According to recent quotations in Glasgow, the price of Scottish cement (blast furnace) was 47s. 6d. per ton, as compared with 47s. for foreign cement. As regarded the last part of the question, Section 10 of the Housing (Financial Provisions) Act, 1924, provided that, in approving proposals for the construction of houses, the Minister of Health should not impose any conditions which would prevent the materials required being purchased in the cheapest market at home or abroad. The Minister had, therefore, no power to carry out the suggestion of the hon. member, but the Government had urged local authorities to arrange that all contracts for, or incidental to, works carried out by them should, in the absence of special circumstances, be placed in this country.

Building Plans.

Mr. H. Williams asked the Minister of Health whether he could supplement the information published monthly in the *Labour Gazette* as to building plans approved in certain areas by an annual statement as to the total value of plans passed by local authorities in the whole of England and Wales.

Mr. Chamberlain said that he thought it necessary, in view of the need for economy, to be content with the large and representative sample provided by the present collection of returns from 146 of the principal towns, covering over two-fifths of the total population of Great Britain, outside London. Figures for the County of London would not be obtainable as prior submission of plans to the local authority was not required if the provisions of the London Building Act were complied with.

Houses Built.

Mr. Chamberlain informed Mr. Viant that it was estimated that some 866,000 houses were erected in England and Wales between the beginning of 1919 and the end of March, 1927, but no particulars were available as to their estimated value.

Rural Housing.

Mr. Chamberlain informed Mr. Robinson that proposals had so far been submitted by forty local authorities under the Housing (Rural Workers) Act, 1926. Other local authorities had schemes under consideration, but had not yet actually submitted proposals. The following was the list:—

County Councils.—Cheshire, Cornwall, Cumberland, Derby, Devon, Dorset, Essex, Gloucester, Hereford, Kent, Lancashire, Lincoln (Holland), Lincoln (Lindsey), Middlesex, Northampton, Northumberland, Somerset, Stafford, Suffolk (East), Surrey, Sussex (East), Westmorland, Wiltshire, Worcester, Yorks (East R.), Yorks (North R.), Yorks (West R.); Anglesey, Brecknock, Carnarvon, Carmarthen, Denbigh, Montgomery, Monmouth, Pembroke.

County Boroughs.—Worcester.

Rural District Councils.—Aylsham R.D.C., Isle of Wight R.D.C., Smallburgh R.D.C., Wayland R.D.C.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—Ed.

Road Charges.

[Reply to "Householder," June 17.]

Sir,—No indication is given as to the authority under which the new road referred to is being made. Is it, for instance, being made under Section 150 of the Public Health Act, 1875, or Section 6 of the Private Street Works Act, 1892, or, again, under more recent Acts, such as the Town Planning Act, 1925, in schemes under which the aforesaid Acts are adopted, and and when applicable? Such information might result in a better considered and more useful reply. But it can be said that, in general, every owner of premises fronting, adjoining, or abutting on a new street (not being a highway repairable by the inhabitants at large) is liable "according to the frontage of their respective premises and in such proportion as is settled by the surveyor" of the local authority. The apportionment is by a division of the expense of making up the whole street and according to longitudinal measurement of the frontage. Thus the owner of premises at the corner of a street is liable for the expenses both alongside and in front of his premises; *i.e.*, if new streets are being made both alongside and in front thereof. The question of depth does not, therefore, arise; nor, in law, is there a right to charge any part of the frontage, either in front or alongside, at a reduced rate. In the case given the new street appears to be made alongside premises only: and a charge will therefore be made according to the frontage alongside only and as indicated above. It makes no difference if there is not access to the new street from the premises. If the premises' front adjoins or abuts, then the owner is liable. In some cases the owner of premises may be charged, although they are not actually contiguous to the street. So it was held in *Wakefield Local Board* v. *Lee* (1876) 1 Exc. Div. 336, where premises were separated from a lane by a small stream, but access to the lane was obtained by two bridges over the stream, which said access could, however, be cut off by means of gates. The principal entrance to the premises was elsewhere.

Roads.

Ultra-Violet Rays.

Sir,—I should be glad if you would inform me whether a mirror reflecting sunlight also reflects the health-giving "Ultra-violet rays." If this is so, it seems to me the possibilities are enormous for use in hospitals, etc.

Corona.

Lime for Plastering.

Sir,—On a certain job the lime used for plastering is made from English lime (putty) in the proportion of 1 to 3 parts of sand; but on being analysed it is found to contain 4 to 1. Can any of your readers account for this? I have watched it being mixed up, and cannot solve the problem.

Puzzled.

Substitute for Tiling.

Sir,—We understand there is a new substance composed of powdered glass and cement which can be coloured, and which has a very hard surface. We are endeavouring to find some substitute for tiling which would have a pleasing finish. Our idea is to reduce the cost of the work, and if you could put us in touch with the manufacturers of this product, we should be much obliged.

J. H. Dewhurst, Ltd.

"Enso" Board.

Information would be welcomed as to stockists of "Enso" board in this country.

Enso.

Asbestos Sheeting.

Particulars would be welcomed of Asbestos Sheet, faced with glazed ware.

Asbestos.

THE BUILDING TRADE

THE LAW OF FIXTURES.—X

By W. T. CRESWELL, Barrister-at-Law; L.R.I.B.A.; Associate (late Fellow) of the Surveyors' Institution; &c.

TRANSFER BY MORTGAGE.

A mortgage deed of property includes all the fixtures, "trade" or otherwise, annexed or constructively annexed, to the land at the date of the mortgage deed, whether such mortgage is legal (i.e., by deed) or an equitable mortgage (e.g., by deposit of the title deeds or deposit of a lease of the property mortgaged). Unless there occur some words in the deed to exclude these fixtures, they indeed constitute part of the mortgagee's security. There need be no specific mention in the deed in the first instance, nor any memorandum with the deposit in the second. There are also included all articles annexed to the land, before or during the continuance of the mortgage.

If a mortgagor adds in any way to the mortgaged property to improve its value, during the term of that mortgage, it is deemed to be an accretion going to the benefit of the mortgagee. (See in *re* Kitchin *ex parte* Pannett, 1880, 16 C.D. 226 C.A.)

A mortgagor usually continues in possession of the property mortgaged, but he must not disannex or remove therefrom any of the fixtures, as the value of the security would thereby be diminished, and might be insufficient to meet the amount of the mortgage. But if the property mortgaged be let by the mortgagor to a tenant, and this tenant himself brings upon the property additional trade fixtures, then they are removable by the tenant as not having at any time been included as security in the mortgage, and being therefore ordinary tenant's trade fixtures.

In Sanders *v.* Davis (1885), 15 Q.B.D. 218, a mortgagor in possession of premises let them to a tenant who brought on to them certain trade fixtures. The mortgagee subsequently entered before the tenant's term had expired and sold the premises (including the fixtures) under the power of sale contained in the mortgage. It was held, that the fixtures did not pass under the mortgage, but remained the property of the tenant.

In the case of trade fixtures hired by the mortgagor and brought on the premises, unless there is an express stipulation to the contrary, the owner from whom these fixtures were hired retains ownership, so long as they have not been left on the premises beyond the term of hire. Excepting, of course, if these fixtures have been purchased by the mortgagor under the hire-purchase system and the purchase is complete; when, having become the property of the mortgagor they merge into the general security; and this appears to hold even when the hire-purchase agreement was entered into prior to the mortgage deed. (See Ellis *v.* Glover and Hobson, Ltd., 1908, 1 K.B. 388 C.A.)

Articles which are not annexed (in the legal meaning of the term) to the mortgaged premises will not pass to the mortgagee unless there is evidence of intention between the parties themselves that they shall. (See Hutchinson v. Kay, 1857, 23 Beav. 413.)

Hire-Purchase Agreements.

As above stated, the mortgage of property also includes the fixtures annexed to it by the mortgagor as part of the security, and this also applies to fixtures which are subject to hire-purchase agreements, whether made before the mortgage or subsequent to it. If the hire-purchase agreement follows the mortgage and there is no express or implied agreement limiting the mortgagee's rights over the articles as part of his security, the articles when annexed are included in the mortgage. (See Ellis v. Glover and Hobson, Ltd., supra.) However, it has been held that when the hire-purchase agreement *precedes* the mortgage, and the mortgagee has had no notice of the hire-purchase agreement, he may be entitled to retain the articles annexed on his taking possession. (See Hobson v. Gorringe, 1897. 1 Ch. 182.)

Partnerships.

A mortgagee is not concerned with partnership claims and the general rule is that fixtures owned by partners remain the property of the mortgagee. In *re* Cotton *ex parte* Nutter (1842), 2 Mont. D and D. 725, a trader mortgaged his trade premises and then entered into partnership and carried on the business on the same premises, subsequently erecting additional trade fixtures. On the firm becoming bankrupt, it was held that the mortgagee was entitled to all trade fixtures, including those of the partnership.

Prior Interests.

Generally, a prior equitable interest in articles which are fixtures will prevail over any subsequent equitable charge. (See in *re* Samuel Allen and Sons, Ltd., 1907. 1 Ch. 575.) But, as previously stated, in this, as in all other matters concerning the removal of fixtures, the passing of fixtures from one party to another must always be considered as being subject to any special intention of the parties, expressed or implied, unless it can be presumed that the mortgagee has at any time authorised the mortgagor to hire and fix on the mortgaged premises articles necessary for the mortgagor's business.

Transfer of Fixtures Apart from Land.

Fixtures may be transferred in certain cases separately from the land to which they are annexed.

A mortgagee's power, acquired under mortgage deed or by Statute, to sell fixtures does not give him a right to sell them apart from the land, whether the fixtures are enumerated in the deed or not. If the mortgage deed gives an express right to the mortgagee in certain events to remove and to sell them separately from the land, then the deed must be registered as a Bill of Sale, because, since it is a legal mortgage of personalty, it must be in the form provided by the Bills of Sale Act, 1882. Registration is only necessary in respect of fixtures (other than trade machinery) when the fixtures are assigned or charged separately from the land.

A mortgage is effectual against any unregistered bill of sale, even though the mortgage itself is not registered. (See Meux v. Jacob, 1875, 44 L.J., Ch. 481.)

The Bills of Sale Acts of 1878 and 1882 refer to personal chattels only; and chattel interests in fixtures (except trade machinery), unless separately assigned or charged, are not included, nor are usually fixtures counted as goods for the purposes of the doctrine of "reputed ownership" under the Bankruptcy Act, 1883 (i.e., if the circumstances in which the property is in the trader's possession, under a disposition, are such as to lead to a fair and reasonable inference amongst persons likely to have dealings with him, that he *is* the owner, and if the real owner is a consenting party, then on the trader becoming bankrupt that property is divisible amongst his creditors). Since, therefore, fixtures forming part of the freehold are not removable, they are not counted as goods and chattels coming within the Acts; though if they are only slightly attached for more convenient use as chattels, and are tenants' fixtures and removable, they are treated as in the separate order and disposition of their owner in case of his bankruptcy.

In Horwich v. Symond (1915), 84 L.J.K.B., 1,083 C.A., however, the tenant of a chemist's shop placed certain articles of shop furniture on the premises for the purpose of his business, and (except so far as was to be inferred from the degree of annexation) without any intention of permanently making them part of the freehold. In consideration for money lent, he had given a bill of sale to the plaintiff, under which the articles in question were separately assigned; and, on his making default under this bill of sale, the plaintiff took possession of the scheduled goods. The chemist became bankrupt, and the defendant (as trustee in bankruptcy) claimed the articles under the "reputed ownership" clause of the Bankruptcy Act, 1883, section 44, contending they were "chattels." The plaintiff contended they were "fixtures." It was held that the articles were annexed to the premises, but only in the slightest possible degree, and that they remained chattels and that the defendant (the trustee in bankruptcy) was entitled to them.

On Bankruptcy.

Usually everything a bankrupt possesses passes from him to his trustee in bankruptcy, to be disposed of for the benefit of the creditors. Included also are "all goods being, at the commencement of the bankruptcy, in the possession, order, or disposition of the bankrupt, in his trade or business, by the consent and permission of the true owner, under such circumstances that he (the bankrupt) is the reputed owner thereof." Fixtures on premises *rented* by a bankrupt as being part of the freehold are not considered as being in the possession, order or disposition of the bankrupt at the commencement of his bankruptcy, but articles attached by the tenant to the premises for their more convenient use, and which are removable by him, are treated as in his order and disposition on his bankruptcy and claimable by the trustee in bankruptcy.

Under the Bankruptcy Acts, 1883-1914, a trustee in bankruptcy (except in certain cases prescribed by the Bankruptcy Rules) cannot disclaim a lease of property without the leave of the Court; and before the Court grants such leave, it may make such orders as it thinks fit with respect to the lessee's fixtures. If there is in the contract between the landlord and tenant who has become bankrupt an enumeration of fixtures removable by the latter at the end of the tenancy, then the trustee has a reasonable time in which to remove them for the benefit of the creditors. Articles which are firmly annexed to the freehold by a mortgagor in possession after the date of the mortgage for the purpose of improving the inheritance, pass to the mortgagee, and do not pass to the assignees of the mortgagor upon his bankruptcy. This rule applies to trade fixtures as well as other fixtures when the mortgagor is not in possession as tenant of the mortgagee. (See Walmsley *v.* Milne, 1859, 29 L.J.C.P. 97.)

MANCHESTER HOUSING CONFERENCE

A conference on various housing problems, which was arranged by the Manchester Women Citizens' Association, was held on June 23 and 24 in Manchester. Proceedings opened with a discussion upon the appropriate size of municipal houses, and the delegates, without passing any resolution, came clearly to the conclusion that in spite of difficulties of rent, such houses should have not less than three bedrooms. Only one speaker opposed this point of view, though several suggested that the two-bedroom house had some useful purpose to fulfil. Lord Astor, who presided, thus summed up the opinion of the meeting:—That things which had at one time been looked upon as amenities and luxuries, the bath and the third bedroom particularly, were now being more and more considered

to be necessities. He pointed out that the cost of building was still largely a governing factor in the problem, and that a reduction of £25 in the average cost of houses would leave authorities in the same position with the reduced subsidy due after September 30 as they were at present. That would save £4,000,000 on next year's building programme. He hoped that the Association and other bodies would emphasise the need for paying greater attention to amenity and good design both in the lay-out of schemes and in the houses themselves. One of the most difficult problems was to decide whether there should be an income maximum fixed for the occupiers of municipal houses. If such a limit were to be fixed there must be regard to the liabilities of the family concerned. A new standard for overcrowding had long been needed: the 300 to 400 cubic feet a person rate was arbitrary and said to be quite insufficient. The point to aim at was to establish some relation between the physiological requirements of breathing and the air space allowed for each inhabitant. There was great lack of uniformity in this matter. Slum clearance and the improvement of areas could only be carried out with a carefully prepared scheme of replanning, and it was just as important to have planning in the country which was already being ruined quite unnecessarily.

LAW REPORT

COURT OF APPEAL.

(The Master of the Rolls and Lords Justices Sargant and Lawrence.)

APPEAL IN ACTION ON LOCAL COUNCIL'S BY-LAWS.

The Attorney-General (at the Relation of the Uxbridge Urban District Council) against James Ellis and Others.

In this case the defendant, Mr. James Ellis, of Park Lodge, Uxbridge, Middlesex, appealed from the judgment of Mr. Justice Clauson in the Chancery Division, granting the plaintiff a declaration that the appellant, by converting a building abutting on his property into two separate dwelling-houses, had contravened the Council's by-laws. The building in question consisted of stables, harness-room with rooms above, and in July, 1922, the appellant converted them into two separate dwelling-houses, and this, the Council alleged, amounted to the erection of a "new building" within the meaning of the various Public Health Acts, and being erected without any deposit of plans, as required by the by-laws, was a contravention of the by-laws.

The defence was that the building in question, being an ancient Tudor building erected about 400 years ago, was not subject to the by-laws, and did not come within any statutory definition which would make it a new building, or the erection of a new building.

Mr. Justice Clauson held that the operations which Mr. Ellis had carried out amounted to the erection of a new building within the meaning of the by-laws governing such matters, and granted the declaration previously stated, but he made no order against the other defendants, to whom Mr. Ellis had let the premises after the conversion.

Mr. Ellis appeared in person to argue his appeal; and Mr. Merriman, K.C., and Mr. R. J. Sutcliffe appeared for the respondents.

Mr. Ellis contended that the building, which had been erected for the accommodation of two families, was not subject to the Council's by-laws, and that the learned Judge had misdirected himself on the law and on the proper construction of the Public Health Acts.

Without calling upon Mr. Merriman for the respondents, their lordships dismissed the appeal with costs, holding that what the defendant had done amounted to the erection of a new building within the meaning of the Public Health Acts, and that therefore he had contravened the by-laws of the local Council.

The Court therefore affirmed the judgment of Mr. Justice Clauson.

NEW BUILDINGS IN LONDON

Chingford.—HALL.—Mr. H. T. Bouner, of Dulwich, has been appointed architect for the new town hall, which is about to be erected for the Urban District Council. The scheme also provides for a fire station and caretaker's house.

Deptford. — REMODELLING. — The remodelling of the Deptford Water Works at a cost of £221,000 has been considered by the Metropolitan Water Board, and the Works and Stores Committee recommend that the carrying out of the greater part of the scheme should not be further delayed.

Great Queen-street.—HALL.—Messrs. Greenham have the demolition work well in hand for the new Masonic temple which is to be erected. Messrs. H. V. Ashley and F. Winton Newman, FF.R.I.B.A., 14, Gray's Inn-square, W.C.1, are the architects.

Hackney. — DWELLINGS. — The London County Council are inviting tenders for the erection of two blocks of dwellings, including the formation of new road, at Shore estate, Well-street, Hackney. The plans are by the L.C.C.'s chief architect.

Hoxton-street.—GIRLS' HOSTEL.—A new hostel for working girls is to be built adjoining Hoxton Hall, in Hoxton-street, Shoreditch, for the Girls' Guild of Good Life, of which Mrs. John T. Rae, of 17, Darenth-road, Stamford Hill, N.16, is President and Honorary Secretary.

Orange-street.—CHURCH.—Messrs. Kieffer, Fleming and Keesey, of 83, Pall Mall, S.W.1, are the architects for the new Congregational church now being built in Orange-street, W.C.2. The builders are Messrs. Tory and Co.

Maida-vale.—GARAGES.—The Paddington Borough Council has approved plans submitted by Mr. George Protheroe, of 237, Maida-vale, for the erection of garages with living-rooms at rear of 197, Maida-vale, to abut upon Elgin-terrace.

New Eltham.—HOUSES.—Messrs. Savage & Co., surveyors and estate agents, of Well Hall Station-approach, Eltham, have effected the sale of an estate at the junction of Southwood-road and Green-lane, New Eltham, comprising nearly 60 acres of building land.

North End-road. — IMPROVEMENTS. — The Fulham Borough Council have recommended that the London County Council be informed that they are prepared to contribute to the total cost of improving North End-road by the construction of a new road, 60 ft. wide, from the junction of North End-road and Edith-road to a point in the former road opposite "Otto House." The scheme is estimated to cost £47,500.

Twickenham. — HOUSING. — Preparations are now being made to develop for building about 40 acres of land, to be known as the Oxford Farm estate, and it is estimated that four to five hundred houses will be built eventually thereon. Plans for the roads, sewers, and the first types of houses are now under preparation. The architect is Mr. Sydney E. Castle, F.R.I.B.A., 40, Albemarle-street.

Wapping. — DWELLING. — The Canonbury Construction Co., Ltd., Canonbury-street, N.1, are about to have their tender accepted by the London County Council for the construction of 96 tenements on the Prusom-street area, Wapping. The price of the tender is £58,661, and the plans have been prepared by Mr. G. Topham Forrest, F.R.I.B.A., Chief Architect to the L.C.C.

Watling.—CHURCH.—The London County Council recommend that, subject to the consent of the Minister of Health, a site at Watling estate, with a frontage to Thirleby-road, be sold to the Wesleyan Methodist Church authorities for the erection of a church.

COMPARISON OF PRICES OF BUILDING MATERIALS ON JUNE 1st, 1927, WITH CURRENT PRICES.

THE TRADE UNIONS AND TRADE DISPUTES BILL IN COMMITTEE

Clause 4 sub-clause (2) of the Trade Unions and Trade Disputes Bill was still under consideration when our last issue appeared. This sub-clause is directed to secure that the contributions to the political fund of a trade union shall be separately levied and funded from the other funds of the union. The only amendment to this sub-clause was one inserted by the Government to obviate a too narrow construction of the sub-clause as being strictly limited to the amounts actually levied for political purposes, the intention of the amendment being to allow interest accumulated on that fund to be treated as part of the political fund and also money raised by other means than the levy and given to that fund.

During the discussion in Committee questions were asked as to what was a political purpose or object to which the sub-section would apply, and the assurance was given that the clause did not detract from the Trade Union Act, 1913, with which the Bill had to be read as one. Section 3 of the Trade Union Act, 1913, to which reference is made in this clause, defines the political objects to which that Act is to apply in sub-section (3), and it is expressly stated in sub-section (1) of that Act that the section applies "without prejudice to the furtherance of any other political objects," thus the political objects affected by this Bill are those laid down in section 3 sub-section (3) of the Act of 1913 and no others.

Sub-clause (3) of clause 4, which relates to the amendment of rules and their registration so as to conform with the provisions of the Bill, passed unamended, but a new sub-clause was added to the Bill postponing its operation as follows:—"Notwithstanding anything in this Act, until the 31 December, 1927, it shall be lawful to require any member of a trade union to contribute to the political fund of a trade union as if this Act had not been passed."

Sub-clause (4) (now sub-clause (5)) passed unamended, as did sub-clause (5), now sub-clause (6), which is an important sub-clause, as it applies the provisions contained in section 16 of the Trade Union Act, 1871, as to the transmission of returns by registered unions, to every unregistered union so far as respects the receipts, funds, effects, expenditure, assets and liabilities, of the political funds. Clause 5, which relates to the regulations which are to apply to established civil servants we need not refer to in detail. It was passed with two minor amendments. It may, however, be pointed out that in some quarters an impression seems to prevail that unless political powers are exerted by bodies in combination, such as by trade unions, their members are deprived of representation. It is hardly necessary to say this is not the case, but as the Chancellor of the Exchequer put it, civil servants had an absolute right to be identified with the fortunes of one political party in their individual capacity as citizens, that is to say, they are left in the same position as any other voter.

In the Osborne case the House of Lords pointed out the constitutional danger involved in allowing bodies to elect members in place of the constituencies, and this point was referred to by the Chancellor of the Exchequer, that if the House of Commons was to preserve its representative character the less they had of members representing particular interests or particular groups the better and more efficient their Parliamentary institutions would be, and it might be added the more representative they would be. When a Member of Parliament represents any particular body, then the constituents as a whole may cease to be represented. A tribute was paid to the action of civil servants during the general strike, but a circular was referred to by the Chancellor of the Exchequer addressed to the general secretaries of all affiliated trade unions, stating that at a session of the Trade Union Congress the secretaries were called upon to answer whether the association was prepared to place power in the hands of the General Council as regarded calling a general strike of its members, and that such a circular reached one of the associations of civil servants.

Clause 6 is a very important clause, and we set it out as amended by the addition of the second sub-clause. —

Sub-clause (1). "It shall not be lawful for any local or other public authority to make it a condition of the employment or continuance in employment of any person that he shall or shall not be a member of a trade union or to impose any condition upon persons employed by the authority whereby employees who are or who are not members of a trade union are liable to be placed in any respect either directly or indirectly under any disability or disadvantage as compared with other employees."

Sub-clause (2). "It shall not be lawful for any local authority or other public authority to make it a condition of any contract made, or proposed to be made, with the authority, or of the consideration or acceptance of any tender in connection with such a contract, that any person to be employed by any party to the contract shall or shall not be a member of a trade union."

Sub-clause (3). "Any condition imposed in contravention of this section shall be void."

Sub-clause (4). "There shall be added to section 5 of the Conspiracy and Protection of Property Act, 1875, the following provision, that is to say, If any person employed by a local or other public authority wilfully breaks a contract of service with that authority knowing or having reasonable cause to believe that the probable consequence of his so doing, either alone or in combination with others, will be to hinder or prevent the discharge of the functions of the authority, he shall be liable on summary conviction to a fine not exceeding £10 or to imprisonment for a term not exceeding three months."

Section 5 of the Protection of Property Act inflicts a greater money penalty than the above where any person wilfully and maliciously breaks a contract of service or hiring knowing or having reasonable cause to believe that the probable consequence of his so doing will be to endanger human life or cause serious bodily injury or to expose valuable property whether real or personal to destruction or serious injury.

Freedom of labour is essential to the community, and this clause is in the interest both of labour and the ratepayers. It is conceivable that as the result of this Bill there may be trade unions representing different political parties, and not one party only, and if local authorities were to select their employees according to the colour of their unions, the political element would enter into local industrial affairs. Besides this the compulsion to be a member of a union might easily develop into compulsion to join a particular union. As regards the last part of the clause, it is only an extension of section 4 of the Conspiracy and Protection of Property Act which already deals with breaches of contract by persons employed by municipalities or statutory undertakings in connection with the supply of gas and water.

Clause 7 was passed, but with one important amendment by the Government, which limits its operation to cases where funds have been misapplied in breach of clause 1 of the Bill. As originally drawn, it would also have applied to clause 4, which deals with the political funds of trade unions. The Attorney-General explained that as clause 1 dealt with offences against the State designed to coerce the Government, the Attorney-General was the proper person to take action in such cases, but the provisions of clause 4 were only designed to protect minorities in trade unions, and stood in a different position, as the State was not affected, and the minority could move the Court if it desired. It may, however, be explained that in cases under clause 1 the right of the Attorney-General to take proceedings does not prevent a private individual whose rights have also been interfered with from applying to the Court.

The clause now reads: "Without prejudice to the right of any person having a sufficient interest in the relief sought to sue or apply for an injunction to restrain any application of the funds of a trade union in contravention of the provisions of this Act, an injunction restraining any application of the funds of a trade union in contravention of the provisions of section 1 of this Act may be granted at the suit or upon the application of the Attorney-General. In the application of this section to Scotland there shall be substituted therein for references to an injunction references to an interdict, and for the reference to the Attorney-General a reference to the Lord Advocate."

THE PRIVATE STREET WORKS ACT

A decision has been given in the recent case, Holy Law South Broughton Burial Board v. Failsworth Urban District Council (Weekly Notes, May 28) on Section 16 of the Private Street Works Act, 1892, on a point which, so far as we are aware, has hitherto not been decided. That section provides, "The incumbent or minister or trustee of any church, chapel, or place appropriated to public religious worship which is for the time being by law exempt from rates for the relief of the poor shall not be liable to any expenses of private street works as the owner of such church, chapel, or place, or of any churchyard or burial-ground attached thereto . . . but the proportion of expenses in respect of which an exemption is allowed under this section shall be borne and paid by the urban authority."

The Urban District Council of Failsworth, the respondents in this appeal, had resolved to make up a certain street referred to as "No. 2" in their district, upon which abutted a Jewish cemetery, and in the provisional apportionment the sum of £376 5s. 3d. was shown as chargeable in respect of these premises. By an indenture made on October 25, 1922, made between the vendors and certain persons, some of them members of the congregation of two synagogues, the Holy Law congregation and the South Broughton congregation, the land had been purchased and vested in trustees for use as a burial-ground for members of the congregations, or, if the trustees should permit, for members of other congregations, and a burial board had been formed to carry out the terms of this indenture. Both synagogues as places of public religious worship were exempted from rates for relief of the poor, but the burial-ground was assessed for poor rates, and poor rate was paid in respect thereof to the respondents. Both the above synagogues were situated about five miles from the burial-ground. By letter the appellants had given the respondents notice of objection to the provisional apportionment, claiming exemption under Section 16 of the Act on the ground that the burial-ground was "attached" to the synagogues, and the justices had held that the burial-ground was not "attached" within the meaning of the section. A Divisional Court on appeal affirmed this decision, holding that there must be physical attachment, connection, or contiguity.

It may be noted that in the Private Street Works Act, Section 16 embraces "trustees" of places of worship, whereas the corresponding section (151) in the Public Health Act, 1875, only mentions "the incumbent or minister"; thus different considerations may arise where the works are being executed under the Public Health Act. (See Hornsey Local Board v. Brewis—1890 Weekly Notes 189.) The two Acts should be placed in the same footing as regards this point, but we do not think this has been done.

(For rates of wages in the Building Trade in Scotland, see page 36.)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender: that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

Following is a list of abbreviations:—Borough Surveyor, B.S.; Borough Engineer, B.E.; District Surveyor, D.S.; Clerk, C.; Town Clerk, T.C.; County Engineer, C.E.; County Surveyor, C.S.; County Architect, C.A.; Surveyor, S.; Engineer, E.; Borough Architect, B.A.; Architect, A.

PROPOSED NEW BUILDINGS & OTHER WORKS*

IN these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owners taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations: T.C. for Town Council; U.D.C. for Urban District Council; R.D.C. for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; B.C. for Borough Council; P.C. for Parish Council; M.H. for Ministry of Health; M.T. for Ministry of Transport; C.B. for County-Borough; B.E. for Board of Education; M.A.B. for Metropolitan Asylums Board; and M.W.B. for Metropolitan Water Board.

FOLLOWING is a list of abbreviations:—Borough Surveyor, B.S.; Borough Engineer, B.E.; District Surveyor, D.S.; Clerk, C.; Town Clerk, T.C.; County Engineer, C.E.; County Surveyor, C.S.; County Architect, C.A.; Surveyor, S.; Engineer, E.; Borough Architect, B.A.; Architect, A.

FAVERSHAM.—Co-operative Society has acquired a block of premises in Preston-st., for new premises.

FOLKESTONE.—T.C. decided that two greenhouses and other buildings should be erected at Sports Ground, Cheriton-rd., at £2,500.

ESTIMATING ON RIGHT LINES

Everyone whose business it is to quote for building work should master the principles upon which estimating is based. These principles are clearly explained and illustrated in

'HOW TO ESTIMATE'

by J. T. REA,

a unique and invaluable work which is not excelled in thoroughness or in scope by any similar book known.

Fourth edition (now ready). 540 pages. Price 15s. net (by post 15s. 9d.). Containing thousands of prices and hundreds of examples of analysis, showing how a builder can make up rates for himself. In view of the difficulty of fixing standard prices under present conditions, the author has included an important series of Adaptation Tables and Percentages (corrected to February, 1927), *which show how rates may be adjusted to meet variations at any time.*

Before purchasing any other book on this vitally important subject, you are invited to inspect this—the standard work which is in use by over 30,000 builders.

A Copy will be sent by return, and your Remittance refunded if the Book does : : not satisfy your requirements : :

B. T. BATSFORD, LTD.
Publishers, 94 High Holborn, London, W.C.

The National Association of Building Societies.

At the annual meeting of the National Association of Building Societies, held on June 16 and 17, at Buxton Town Hall, the Chairman of the Executive, Mr. Enoch Hill, J.P., of Halifax, in his official address, and dealing with the question of the subsidising of house building, pointed out that during the three years 1924 to 1927 the amount of the National Exchequer subsidy paid on account of houses built in England and Wales amounted to £24,259,941, in addition to the loss borne by local authorities, equivalent to a penny rate under the 1919 Act, or about £900,000 per annum, making the total for the three years £26,959,941. Sir Kingsley Wood recently demonstrated by careful records that the effect of the subsidy had been seen in the cost of houses. When the subsidy was high, the cost was high, and when the subsidy was low, the cost was reduced. The subsidy had not produced the small houses, or the economical houses, at rents within the means of the working classes. If the amount of the subsidy had been devoted to building small houses, suitable for people in humble circumstances and for small families, at a cost of £300 each, 90,000 could have been provided, and if this process had been repeated four times during 12 years, 360,000 would have been provided.

Skilled Employment and Apprenticeship Association.

We note from the twenty-first Annual Report of this Association, just issued, that during 1926 the number of applications received by the Committees was 2,719, an increase of 479; the numbers of boys and girls apprenticed showed a decrease, but the numbers placed as learners and improvers showed a considerable increase. The East London Apprenticing Fund received 16 applications for assistance in the payment of premiums, and to 14 of these the necessary money was loaned, as against 10 last year. Seven boys completed their indentures during the year, and there were 44 still on the books.

THE SCOTTISH BUILDER

NEW BUILDINGS IN SCOTLAND

Aberdeen.—Buildings.—The Plans and Sewerage Committee of Aberdeen Town Council passed 18 plans to the total value of £48,232. These included plans for extensions at Robert Gordon's Colleges to the value of £45,000, and for two dwelling-houses, estimated to cost £1,380.

Aberdeen.—Extension.—The Town Council has accepted estimates for extensions at the City Hospital at a cost of £50,350.

Ayr.—Cinema.—The Dean of Guild Court has passed plans, presented by the Scottish Cinema and Variety Theatres, Ltd., of Glasgow, for a picture-house at 35-40, High-street. Besides a picture theatre, with seating accommodation for 1,000 persons in the area and for 424 in the balcony, the building will include tea-rooms and offices. The estimated cost is £10,000.

Edinburgh.—Buildings.—Warrant to erect a new cinema at 18-20, High-street has been granted to Mr. Philip S. L. Lucas by the Dean of Guild Court. The building will be on the opposite side of the street from, and facing, John Knox's house. It is to have seating for 1,100. The trustees of George-square Nursing Home for Women was also granted warrant to build a nurses' home and garage at 72, Spring-gardens, at a cost of £4,000. Other warrants granted were:—Trustees of Edinburgh Hospital and Dispensary for Women and Children—dispensary at Whitehouse Loan; Governors of Fettes Trust—pavilion at Fettes College, Comely Bank.

Edinburgh.—Conversion.—It is proposed to convert Huntly House, Canongate, into a Corporation museum, and the Plans and Works Committee of the Town Council, accompanied by Mr. F. C. Mears, architect, have made an inspection of the house. Mr. Macrae, City architect, and Mr. Mears are to submit a scheme.

Edinburgh. — Housing. — The Edinburgh Dean of Guild Court has approved the following plans:—Mr. T. Brown—four flatted villas at Barnton-terrace; City of Edinburgh—lavatories at King's-place, Portobello; Edinburgh Ice Rink Co. (Ltd.)—additions and alterations at Ice Rink, Haymarket; Mr. A. Matthew—three double villas at Cluny-gardens; Morningside Congregational Church Trustees—church classrooms and caretaker's house, alterations and additions at corner of Morningside-road and Chamberlain-road; Mr. D. Alexander—shop and four houses at 19-23, North Fort-street, Leith; Church of Scotland General Trustees—alterations at West St. Giles' Church, Meadow-place; Mr. J. Miller—five double houses at Queensferry-road and West Barnton-terrace.

Fraserburgh. — Gas Works. — The Town Council has decided to proceed with the erection of a new gasworks at the top of Mid-street, amounting to £18,600.

Insch.—Institute.—The late Dr. Russell has bequeathed a sum of £8,000 and a house property, to erect and endow an institute, consisting of a library and reading and recreation rooms, in Insch, and also to provide a bowling green.

Leith.—Town Hall.—A report by Sir George Washington Browne, P.R.S.A., regarding the architects' competition for the design of the new Leith Town Hall and Library has been considered by the Lord Provost's Committee of Edinburgh Town Council, and the Committee resolved to recommend that the architects, Messrs. Bradshaw, Gass & Hope, of Bolton, be instructed to prepare the working plans of the proposed building with a view to tenders being invited.

Rothesay.—Houses.—The Scottish Board of Health has approved of the municipal housing scheme of nine blocks of buildings containing 35 houses, and the Town Council, who are erecting the houses, has agreed to purchase the land outright from the Marquis of Bute.

Sanquhar.—Housing.—The Town Council has accepted tenders for the erection of 12 new houses of the "M'Connel" type, of which Mr. William Scott, Inglewood, Sanquhar, is the designer and architect. Eight of these are two-apartment houses and four are of three apartments.

BUILDING TRADE WAGES IN SCOTLAND.*

The following are the present rates of wages in the building trade in the principal towns of Scotland. Every endeavour is made to ensure accuracy, but we cannot be responsible for errors that may occur:—

*These prices apply to *new buildings only*. They cover superintendence by foreman and carry a profit of 10 % on the prime cost without establishment charges. A percentage of 1½ should be added for Employers' Liability and National Health and Unemployments Acts, and from 1s. 6d. per £100 for Fire Insurance.- The whole of the information given on this page is copyright.

BOOK REVIEWS

The New Law of Property. Third Edition. Being a Sixth Edition of Topham's Real Property (an introductory explanation of the law relating to land) showing the changes effected by Lord Birkenhead's Act; The Consolidating Statutes of 1925 and the Amending Act of 1926, by Alfred F. Topham, of Lincoln's Inn, one of His Majesty's Counsel, formerly Whewell Scholar and Chancellor's Medallist in the University of Cambridge, Reader in the Law of Real Property and Conveyancing to the Council of Legal Education. (London : Butterworth & Co. 1927.) 15s. net.

We gave a notice of the Second Edition of this work in our issue for August 28, 1925, and we are not surprised that a further edition should be called for as it is one of the most comprehensive treatises that had come under our notice. Such changes in the law as are affected by the six statutes involved (or we might say the eight statutes involved for Lord Birkenhead's Act, the Law of Property Act, 1922, was more or less transitional and the greater part has been repealed in the consolidating statutes, and a further amending Act, The Law of Property (Amendment) Act, 1926, has already had to be passed) cannot be dealt with in any simple form, but the author has done his best to explain this "simplification of the law" as it has been termed. From the number of text-books issued dealing with various branches of the "new law" it must be recognised that at present this process of simplification has only introduced uncertainty and some confusion, but the author of the work we are considering at any rate recognised that this must be the case in the early stages of such at attempt to reform the law. The new features contained in this edition are the amending Act we have referred to above, and the Statutory Conditions of Sale which have been promulgated by the Lord Chancellor and which will apply to contracts of sale by correspondence, subject to any modification or stipulation or intention to the contrary expressed in that correspondence, and they may also by express reference thereto be made to apply to any contract of sale of land and may be cited as the "Statutory Form of Conditions of Sale, 1925"

In the Index we fail to find a reference to the section of the Statute under which these conditions are made, nor is this stated in the text where the conditions are set out, but they are made under Section 46 of the Law of Property Act, 1925, as will be seen by reference to page 333. They will at least mark one improvement effected in the law, for readers of our pages will be aware of the difficulties which have arisen in connection with preliminary contracts arranged by correspondence.

The great difficulty practitioners are confronted with in connection with the amendment and consolidation of the law on such a scale as occurred in 1925 is under the new nomenclature to recognise the sections of the old statutes with which they are familiar, portions of which are retained unamended. We do not know whether these old sections could be earmarked a little more clearly in the text than they are at present. They can be traced through the Table of Statutes, but we venture to bring the difficulty we experience before the author, for if he thinks there is any point in it, we feel certain no one can be found more capable of dealing with the difficulty than he is.

The Law of Intestacy. By A. W. Peake, Barrister-at-Law. (London : Gee & Co., Ltd. 1927.) 5s. net.

Whether or not in the long run it will prove that the efforts to reform the law of property will be successful remains to be seen, but at the present time the seven statutes passed with this object have rendered both practitioners and laymen uncertain as to what the law is, and already a good many cases have come before the Courts seeking decisions as to the interpretation to be placed upon provisions contained in those statutes. Amongst the subjects affected by these statutes is the law of intestacy, and this change in the law is of importance to the general public, for in some cases persons neglect, or purposely refrain from, making wills leaving the distribution of their estate to follow the statutes; but the matter is of such complication that any layman will do well to consult his lawyer as to the present law. Lawyers will find the subject treated in a very compact form in this little treatise.

TRADE NEWS

The Friends' House.

We are informed that with reference to this building illustrated in last week's issue, the walling of the small Meeting House was panelled in Western Hemlock Silver Grey, supplied by Messrs. Drytone, Ltd.

With reference to the Friends' House, Euston-road, illustrated in last week's issue, one of the large rooms can be divided into three committee rooms by use of "Esavian" folding screens, in oak, which were supplied by the Educational Supply Association. One of these screens is also erected in the tea-room so that this can be divided into two separate compartments.

Travelling Exhibit of Boilers.

The travelling exhibit, fitted with a working installation of the National Radiator Company's, Ltd., "Ideal" Cookanheat and "Ideal" Classic Radiators, will demonstrate as follows:—July 4, Friary Hotel Yard, Derby; July 6 and 7, Cattle Market, Buxton; July 8, Dewhurst Bros.' Garage, Jordangate, Macclesfield.

The Cost of Noise.

An extensive report by Professor Spooner on the progress of the movement for the reduction or prevention of harmful noise was submitted to the International Fatigue Committee of the American Society of Industrial Engineers at the National Convention at Chicago, on May 26, 1927. This report—the sixth the author has been privileged to write for the Committee since he joined it in 1912—is based on his investigations and experience in dealing with noise problems during the past ten years, which have led him to form the following definite opinions:—The fatiguing effect of noise in all our activities is the most neglected aspect of the Science of Fatigue. The prevention or reduction of noise in commercial and industrial work is a paying proposition. That mental work done in a noisy, distracting atmosphere sooner or later leads to nervous complaints, and tends to lower efficiency and output. That the mechanical uproar of tramway cars is the most nerve-shattering noise in our streets. That horns or hooters should be standardised as to pitch; and that a low, melodious note should be adopted. Designers and constructors of machinery must pay more attention to the balancing of rotating parts, particularly high-speed ones, and to the mounting of certain machinery on anti-vibration supports. There is wide scope for genius in dealing with noisy processes. The most serious aspect of the noise problem, one that has received no attention, is the enormous loss due to impairment of working capacity and efficiency in City and in industrial life. In the aggregate, the economic loss due to this kind of wastage must be staggering in amount. But the loss due to ill-health and premature death cannot possibly be estimated.

Beira Bridge Contract.

Messrs. Dorman Long & Co. have obtained a contract to build a bridge over the River Pungwe, Portuguese East Africa, for the Beira Railway. It is anticipated that the contract, amounting approximately to £150,000, will be completed in eighteen months.

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXXIII. No. 4405. JULY 8, 1927.

THE DECAY OF BRICK AND STONE

THE subject of decay of building materials which is constantly before us never seems to lead to a solution capable of satisfactory application. The pessimist tells us there is no solution and that decay is inherent in all things, but it is probably nearer truth to assert that there are many solutions, each dependent upon factors which vary both in nature and magnitude —factors not only necessarily different for different materials but changing with environment. Thus the problem for a particular material may be far from simple, and when that material is itself a somewhat variable natural product like stone, or primitively manufactured material such as brick, the possible causes of decay must be greatly increased. Hence it hardly appears likely that any specific will be found capable of general application for the prevention of decay in any particular material in all circumstances, rather must we hope for merely sectional solutions for very definite sets of factors and begin our investigations by the selection of the most generally useful set of factors which can be arranged.

The term decay is usually understood to mean an unequal deterioration of a material leading to local breakdown; to attain equality of decay would go far to solve our problem—"the one-horse chaise showed signs of decay, but nothing local as you may say." We shall never attain the ideal of Wendell Holmes's poem, but we can at least try so to order our construction and design that glaring starting points for decay may be absent. We need not design carved pinnacles in unsuitable stone with features giving lodgment for dirt and moisture, nor need we expose material obviously soluble in certain moist atmospheres to conditions predooming it to failure. No one will deny the importance of research upon this subject. The annual wastage is now generally appreciated and if demonstration is wanted the inquirer has only to look at almost any public building not of recent erection in order to see the ravages wrought upon it, not by the hand of time, but by the atmosphere, vegetation and dirt in protected situations. Let him spend a day or two amid the perishing glories of Oxford and then visit Manchester, and he will realize that decay proceeds from different causes in different places.

The Commission on the decay of Westminster Palace appeared to offer a unique opportunity for prosecuting an investigation which, as far as the atmosphere of London is concerned, would lead to important results. The published outcome of this Commission's work is disappointing, and though the causes of decay may be ably summarised the solution proposed—the use of another stone for repairs, extraordinarily difficult of application to the problems in question—is very far from meeting with general approval. We should like to have seen as a first effort of the Commission the exposure of stones of different kinds in form and location similar to those which have failed, including specimens of "reconstructed" stone which should possess a homogeneous structure not usually attained by natural stones, and in which various small percentages of binding material might have been incorporated. It is quite true that weathering data, to be obtained by exposure for any good purpose, take a very long time to collect, but a beginning should be made. Tests of this kind upon a few flat specimens have been in progress, thanks to the initiation of the R.I.B.A., or perhaps more correctly the Architectural Association, and the work of the Geological Museum, Jermyn Street, for many years—actually, we believe, some seventeen years—and the next report on this stone should give valuable information.

A theory of decay which attracted some attention a few years since is that put forward by Mr. Marsh, of Oxford University, who holds that it is due to small micro-organisms which, growing in the stone, gradually lead to its disruption. These organisms are killed by alkaline and also by acid solutions; hence it is claimed that a measure of preservation is possible by the use of an alkaline mortar, or by the slow formation of an acid salt as by the use of copper. Mr. W. A. Forsyth has observed the exceptional preservation of stone in the neighbourhood of copper lightning conductors and has introduced copper strips into the stone joints of a new school building of Box stone at Bath, which practice has been followed in a more recent building for Clifton College in Monk's Park stone. The effect of these experiments will be followed with interest. In a recent lecture at the Royal Institution, Mr. J. Allen Howe drew attention to a means of preventing decay by periodical hosing down of the stone work, thus preventing the accumulation of dirt and its accompanying incrustations of sulphate of lime. We believe that one of the large London stores is washed down regularly in this manner and data on this subject might well be collected.

Professor A. P. Laurie, in a paper appearing in the Proceedings of the Royal Society of Edinburgh, has attacked the problem from a quite different aspect in reference to brickwork. He finds that in certain cases soluble salts pass from the mortar joints into the brickwork and cause disintegration, and draws attention to the importance of this fact relative to the repointing of buildings. He has investigated the manner in which this transference occurs. Besides the usual capillary action he finds a creeping surface action and, on evaporation of moisture, a distinction between the early and late stages. He considers that lime enters the pores of the brick due to gradual solution of the mortar in water passing over the surface. This is, of course, largely converted into carbonate by the atmosphere. This, however, is a slow process and lime, whether carbonated or not, is readily attacked by the sulphuric acid present in most atmospheres with the formation of sulphate of lime, which was found in large quantity in the decaying portion of the brick. This salt, on crystallisation, breaks up the brick surface. It is suggested in the case of substances or parts of a substance in which water is equally distributed that, if evaporation progresses at different rates in different parts, there will be a passage of water from the slow-drying and the quick-drying portions. Such transference of water will of course carry salts in solution with it. An investigation of a case of stone decay indicated that ordinary salt in solution was at least partly responsible for the defects observed. Experiments such as these serve to remind us that decay in a particular material must be considered in relation to the binding matter, such as mortar, associated with it in construction. Many years ago Professor van de Klos put forward a theory that defects in stone were largely due to its frequent association with Portland cement. Thus it will be seen that the choice of a material best suited to its environment presents in the present state of knowledge no little difficulty, and that the variations found in a given material, whether natural or artificial, add considerably to the complexity of the problem. When we have to take into account the question of cost and architectural suitability, as is usually the case, difficulties further increase. But research on any subject is seldom a simple matter, and in our view the first step should be some co-ordination which would allocate specific problems to individual workers, who might well receive national support for a national cause. The scientist would doubtless advocate fundamental research on inherent properties, a thorough but exceedingly slow process. The layman, on the other hand, would prefer to see a large number of actual weathering tests for different materials in different environments instituted, a more primitive but less costly proceeding, which in our view would be of considerable value.

NOTES

The Architectural Association.

It was a happy idea to ask Sir Aston Webb to distribute the prizes last Friday to students of the Architectural Association Schools, and Sir Aston, who was born, we believe, in the year that the Association was formed, and has been a member for some sixty years, by his presence on the occasion showed once again the interest he has always taken in the A.A. and in the cause of architectural education. The progress of the Association has been remarkable, and its record is a long and honourable one and it was fitting that a past Principal, whose great services to the profession generally and to the A.A. in particular are well known, should have made this prize-giving function his first public appearance since his unfortunate accident a few years ago.

The St. Stephen's Hall Paintings.

Quite apart from the ability displayed by the artists in this series of paintings, too much emphasis cannot be laid on the wisdom of the procedure which accompanied the undertaking. For this not only affirmed, but put in practice, a principle of the first importance, one which we have laboured to promote in writing on this subject over recent years. Instead of the customary isolated efforts of artists when working on what should be a corporate undertaking, these paintings were planned in close co-operation beforehand under the general direction of Sir D. Y. Cameron. Such corporate approach, without which no consistently concerted scheme is possible, has led to a fine result, very much to the credit of the artists concerned in the undertaking. We have only to recall the series of paintings in the Royal Exchange to perceive how the absence of this essential requirement impairs the result. It will also be recalled that on the occasion of an Arts and Crafts Exhibition at the Royal Academy some years ago, the large room was arranged for a series of wall paintings which, owing to the complete lack of co-ordination and preparation beforehand, presented most irreconcilable elements wholly destructive of any unity between them. This was particularly unfortunate as the outcome of an arts and crafts movement which assumed a sort of leadership in matters of decorations, and as a result the prospects of wall painting were seriously retarded. It is, therefore, a matter for much congratulation that a number of artists should have, through wise forethought and co-operation, together established the excellence of the results to be obtained thereby.

Sculpture in Paris.

It is not perhaps of much importance to us whether sculpture falls under one designation or another, the best sculpture being less related to a particular age than to all time. For the same spirit underlies the fine art of any period. And this thought becomes uppermost in looking at the beautiful sculptured figures above a little drinking-trough which stands in the little public garden of the church of St. Germain des Prez in Paris, presenting to us an example of the simple, unconscious expression of beauty, so touching in its direct human appeal. Here there is seen no need for a subject-matter beyond that of human life itself. This sculpture represents a shepherd youth, standing in an attitude of repose, and a girl, with that significance with which J. P. Millet invested his figures. The French are here often our masters, as their art is nearer to life. We are inclined too much to posture in sculpture, to seek the manner of sculpture rather than its reality, and we call attention to this beautiful tranquil piece of work as an example of that great subject-matter for sculpture which always lies near to hand where the artist seeks in human life itself for his inspiration. The work is apparently executed in cement, and it reveals the possibilities lying in this material for fine expression.

Architecture and Music.

A good deal has been written in former issues on the relations of architecture to music, and what has been written in our pages was recalled to our thoughts whilst we enjoyed the hospitality of the London Academy of Music last week on the occasion of a formal inauguration of their admirable new premises at Queen's Gate Hall, South Kensington. The function which we attended was well managed, and one came away from it much impressed by the importance and value of music in the scheme of education. The speech by Mr. E. M. Rich clearly showed how far-reaching are the effects of music teaching in the County Council schools, and we wonder if amongst it all a teacher has tried to explain how and why beautiful architecture may be styled frozen music. It looks as though the London Academy of Music will have a long and successful existence under the special system of tuition by Dr. T. H. Yorke Trotter. It was certainly heralded in its new environment by speeches which were models of simple and pleasing expression.

The National Physical Laboratory.

The Inspection by the General Board of the National Physical Laboratory took place on Friday, the 24th ult., when a distinguished company was present, and

Edinburgh Castle from the Mound, showing Scottish National War Memorial.

Sir Robert Lorimer, A.R.A., Architect.

Scottish National War Memorial: The Lion at Entrance.

By Miss Phyllis M. Bone.

received by the President of the Royal Society. The exhibits covered a very wide range of inquiry, and included some that have a direct interest to architects and builders. Investigations are being made into the effect of heavy traffic in setting up vibrations in the ground. Exhibit No. 128 related to the reflection and refraction of sound waves in buildings to which we have previously drawn attention. The glare due to brilliant lights frequently employed in public places and motor-cars is receiving attention. This is a matter of great importance, and the accidents that so frequently occur due to the blinding effects of the powerful search-lights employed on motor-cars show the great need of this work. Would it not be worth while first to define the term "glare" quantitatively, and then to prohibit the use of all "glaring lights" in all public places? The work done at the Laboratory is of great interest and undoubted value to our manufacturers, who appear to be taking much real interest in the results obtained.

The Eclipse. Architects, in common with the rest of the world, flocked to the zone of totality on June 29, and although the weather was unkind, it might on the whole have been worse. To begin with, it was an amazing piece of fortune that Giggleswick, where the Astronomer Royal was stationed with his apparatus, should have enjoyed a fine view. Only those who happened upon totality areas where heavy rain was falling at the moment failed to witness a sight of supreme grandeur. It is to be hoped that some artists and architects may have jotted down their impressions of colour effects while these were still fresh. Even when the crescent of the sun immediately previous to the eclipse was but faintly discernible the blue light of the horizon and the sunset effects during the movements of totality seem to have been incredibly beautiful.

Brazil. "The Times Brazil Number" contained much that is of architectural interest. It included an account of the forgotten cities of the Sert o with their ancient churches and temples. The old Villa Rica de Albuquerque, the most stupendous of the dead cities of the interior, now lies concealed among vegetation and abandoned gold mines. "The ancient houses, resting upon foundations of imperishable hardwoods, spread up and down the hills. . . . Each hill-top is crowned with its beacon church. . . . All the temples of this city are beautiful examples of the Jesuit baroque style of the Brazilian colonial period." In regard to the modern capital, Rio de Janeiro, its site is certainly one of the most beautiful in the world, but its palaces of commerce are amazingly akin to those of Marseilles and Shanghai, and show no trace of characteristic architectural form or detail.

Brazilian Architecture. The architectural section is dealt with by Señor José Marianno, President of the Brazilian Fine Art Society. Originally, he tells us, Brazil possessed no architecture, the natives living in thatched huts. The commercial architecture that was introduced from Europe displayed a uniform character, and artistic imagination was forgotten in the necessities of the day. The high enclosing walls, built round the houses as a defence against the sun, were Moorish in style with balconies and grilled windows, the roofs being covered with the curved Portuguese type of tiling. The subsequent trend towards nationalism appears to have exerted a bad effect upon house architecture and the homely Brazilian type of house gave way to a medley of cosmopolitan styles.

Gray's Inn. We noticed in the daily Press on Tuesday an announcement that changes are about to take place at Gray's Inn. This we have been aware of for some time, having seen photographs of the drawings prepared for the purpose. We believe those who care for, and appreciate, the charm and peace of South Square will find, when the scheme is executed that Sir Edwin Cooper has designed, that all the peace and charm will remain, with dignity added. The present roof and wall lines have been zealously retained so that there is no disturbing note. The carrying-out of the interior of the library promises to be worthy of the traditions and learning of Gray's Inn. We look forward, when the drawings are available, to illustrating a notable achievement.

Scottish National War Memorial: The Unicorn at Entrance.

By Miss Phyllis M. Bone.

GENERAL NEWS

Professional Announcement.

Mr. Chas. W. Latter, F.S.I., chartered quantity surveyor, has removed to premises at 44, Bedford-row, W.C. Telephone: Chancery 7471.

Architect's Estate.

Mr. Clement Cooper Lloyd, of The Hollies, Rawson-avenue, Halifax, Yorks, and of Imperial Chambers, Halifax, architect and estate agent, left £16,570.

Bequest to the R.I.B.A.

Mr. Alfred Charles Houston, A.R.I.B.A., of Brunswick-place, Hove, who died on March 11, aged 61, left estate of the value of £37,859, with net personalty £5,079. He left the residue of the property (a substantial amount) to the Royal Institute of British Architects, 9, Conduit-street, W.1, for educational and maintenance scholarships for sons of architects and artists in impecunious circumstances.

St. Giles's Christian Mission.

We have received the sixty-seventh annual report of the St. Giles's Christian Mission, whose headquarters are at 15, Gray's Inn-road, W.C.1. This institution does work amongst the poor and the children of the poor, amongst prisoners and young first-offence children—work, whose value in the cause of humanity, cannot be calculated. Last year 973 ex-prisoners were assisted to make a fresh start in life; 467 men and women were assisted under the heading of general relief cases; 1,149 adults and children were given a holiday at Maldon, and—perhaps most important of all—149 friendless children offenders were admitted to the Boys' Homes. Work such as this ought not be held back for lack of means, and any contribution—either in money or kind—will be gratefully received.

Liverpool Cathedral: Building Progress.

We learn from the "Cathedral Builders' Quarterly Bulletin" that during the past three months there has been a marked change in the appearance of the site, since nearly everywhere the walls and piers are now up to a height of about 10 feet. Both for convenience of building, and in order that whatever settlement there is may be uniform, it is important that the whole building should rise simultaneously, and that no part of the work should be much in advance of any other. The only part of the new section at the moment lagging behind is one pier of the nave arch, but this is now being taken in hand. Previously, owing to the large amount of material and plant on the restricted area of the site, it was impossible to clear a space to excavate the foundations for this pier. Since the plans for the central space were originally passed by the cathedral committee, the question has been raised as to the possibility of a small additional chapel being required at the cathedral. The erection of this chapel is, at present, only a suggestion, but it was thought desirable to make provision for it if it should be required at some possible future date. The architect has therefore made a slight modification in his original plans so as to admit of a chapel being built on the west side of the new transept. The chapel would be approached from a doorway in the north arm of the transept, and this doorway is now being built, so that there shall be no need to cut away the wall if the chapel is proceeded with. The number of men engaged on the work is now about 80, of whom the masons number 47. More masons could be employed with advantage, but men with the necessary skill are by no means plentiful, while there is still difficulty in accommodating them on the site. The second annual "Builders' Service" will be held on Saturday, July 16, at 3 p.m. The general scheme of this service will be based on that of last year.

An Interesting Discovery.

An interesting discovery was made in High-street, Colchester, the main street of the borough, when the foundation stone of premises being demolished by Barclays Bank, to make room for new buildings, was removed. Below the stone, which was laid on November 17, 1879, were a copy of "The Builder" of that date and of the *Times* and *Punch*, a copy of the Bible, some coins of the realm, a railway time-table, and plans of the building. There were also found under the foundation stone a written memorandum giving the names of the architect, Mr. Ernest C. Lee, of London; the builders, Messrs. Saunders and Sons, of Dedham, Essex; the clerk of works, Mr. Alfred S. F. Kirby; and the foreman, Mr. John Murray Hayes. The estimated cost of the building was recorded as between £4,000 and £5,000.

The Aldwych Site.

The London County Council, on July 5, agreed to let on lease for 99 years at a rent of £5,000 a year a site in Aldwych to the west of Bush House, to Bush House, Limited, with an option to be exercised within three years of taking a similar site to the east of Bush House on the same terms. Each site has an area of about 13,400 square feet, and a frontage to Aldwych of about 155 feet. They also agreed to a recommendation by the Improvements Committee that the Grand Hotel, Northumberland-avenue, should be sold for £300,000 to the Gordon Hotels, Limited, or its nominee. The Committee stated that the existing leases to the company expire at Lady Day, 1957. The ground-rents amount to £10,204 15s. a year, so that the purchase price for the freehold represents rather more than 29 years' purchase.

Mr. Percy Harris declared that it would be suicidal at a time like the present for the Council to part with property of such a character. The ground in question might conceivably be required for traffic purposes. There were possibilities also that the site might be needed for widening the Strand. In view of the recommendations of the Royal Commission with regard to Charing Cross Bridge, it seemed crass folly for the Council to part with the freehold of what might be a key position.

Sir Percy Simmons, chairman of the Improvements Committee, in declining to take the recommendation back, asked why the site should be regarded as a key position. The only reason that could be assigned was that it was a big building; but there were other big buildings in the neighbourhood. As to the question of one-way traffic and the widening of the Strand, the Committee had given the matter the fullest consideration, and the site would not be required.

Royal Sanitary Institute Congress.

The Royal Sanitary Institute is, at the invitation of the Mayor and Corporation, holding its 38th Congress at Hastings from July 11 to 16, under the presidency of the Right Hon. Sir William Joynson-Hicks, Bart., P.C., M.P., Secretary of State for Home Affairs.

The Congress opens on Monday, July 11, when the President, the Right Hon. Sir William Joynson-Hicks, Bart., P.C., M.P., will deliver his inaugural address. The lecture to the Congress will be given on Tuesday by Sir William Hy. Willcox on "Chronic Rheumatism in Its Relation to Industry," and on Friday evening Sir Henry Gauvain will give an address and show a film dealing with "The Treatment and Training of Crippled Children." The business of the Congress is dealt with in seven sections and six conferences. A. Sanitary Science and Preventive Medicine. B. Engineering and Architecture. C. Maternity and Child Welfare, including School Hygiene. D. Personal and Domestic Hygiene. E. Hygiene of Food. F. Hygiene in Industry. G. Veterinary Hygiene. 1. Representatives of Sanitary Authorities. 2. Authorities of Health Resorts. 3. Medical Officers of Health. 4 Engineers and Surveyors. 5. Sanitary Inspectors. 6. Health Visitors. Receptions, garden parties and visits to institutions dealing with various phases of child welfare work and municipal undertakings of professional interest to medical men, engineers and others, are being arranged, as well as excursions to centres of general interest such as Bodiam Castle, Rye, Winchelsea, Arundel, Canterbury, Battle Abbey, Tunbridge Wells, Bexhill, Eastbourne, etc., etc. The Health Exhibition, which is an important part of the Congress, will include exhibits on infant and invalid foods, household and kitchen appliances, filters, water softeners, refrigerators, gas stoves and fittings, electric appliances, school and office furniture, soaps and disinfectants, sanitary appliances, and will be opened by the Right Worshipful the Mayor on Monday afternoon, July 11.

COMPETITION NEWS

Herne Bay Municipal Buildings.

Designs are invited for the erection of municipal buildings and business premises on a prominent site at Herne Bay. The President of the R.I.B.A. has nominated Professor A. E. Richardson, F.S.A., F.R.I.B.A., to act as assessor. Premiums of £150, £100 and £50 are offered, and printed conditions may be obtained from the Clerk to the Council, Westminster Bank House, Herne Bay. A deposit of one guinea is required for a set of the printed conditions, which will be returned upon the submission of a bona-fide design.

"Brenforce" Travelling Scholarship, 1927.

The "Brenforce" Travelling Scholarship of £300 and Gold Medal offered by the Institution of Structural Engineers in the competition for a design for a reinforced concrete water tower (see page 58), has been won by Mr. J. Blackett, of Newport, Mon., a student of the School of Architecture, University of Liverpool. Mr. Blackett is now Deputy Architect to the Newport Corporation. There were sixty-four entries for the competition.

Bradford Grammar School.

Drawings and plans have been submitted by 76 architects—it is understood—in connection with this competition. The assessors' adjudication is likely to be known within the next fortnight, after which the plans will be on view in Cartwright Hall, Bradford, during the last week of July.

Society of Engineers: Thesis Competition.

We are informed that, owing to the generosity of a member of the Society of Engineers, three special yearly premiums of ten guineas each have been provided for the classes of Members, Associate Members and Associates respectively of the Society, for three years. In each class the premiums will be awarded for the best paper submitted before November 30, 1927. Competitors should submit titles of their papers to the Society (at 17, Victoria-street, S.W.1) before starting to write the papers, which should be about 6,000 words in length.

MEETINGS

Friday, *July* 8.

Institution of Municipal and County Engineers (South Midland district).—At Wootton Pillinge, Beds. 11 a.m.

Saturday, *July* 9.

Institution of Municipal and County Engineers.—South Wales district. At Bwlch-y-Clawydd. 10.45 a.m.

Hertfordshire County Council Rural Industries.—Visit to Hampton Court. 10.15 a.m.

Tuesday, *July* 12.

Architecture Club.—Twelfth Dinner. Savoy Hotel. 7.15 p.m.

Wednesday, *July* 13.

Faculty of Architects and Surveyors.—Memorial Hall, Farringdon-street, E.C. 4. 5 p.m.

Monday-Saturday, *July* 11-16.

Royal Sanitary Institute.—Congress and Health Exhibition. At Hastings.

Scottish National War Memorial: Entrance Porch facing Crown Square.

Sir Robert Lorimer, A.R.A., F.R.I.B.A., Architect.

K

THE SCOTTISH NATIONAL WAR MEMORIAL

Designed by Sir ROBERT LORIMER, A.R.A., R.S.A., F.R.I.B.A.

"Is it possible, that artistic activity is something like the activity of radium, a concealed unexpected agency, everywhere and at all times operative beneath the surface of things? Amid the tangled intellectual and ethical phenomena of the modern world, art may be something more than mere elegant distraction, and beneath the surface of things may be all the time radiating a beneficent influence which in the future may be traced and determined."

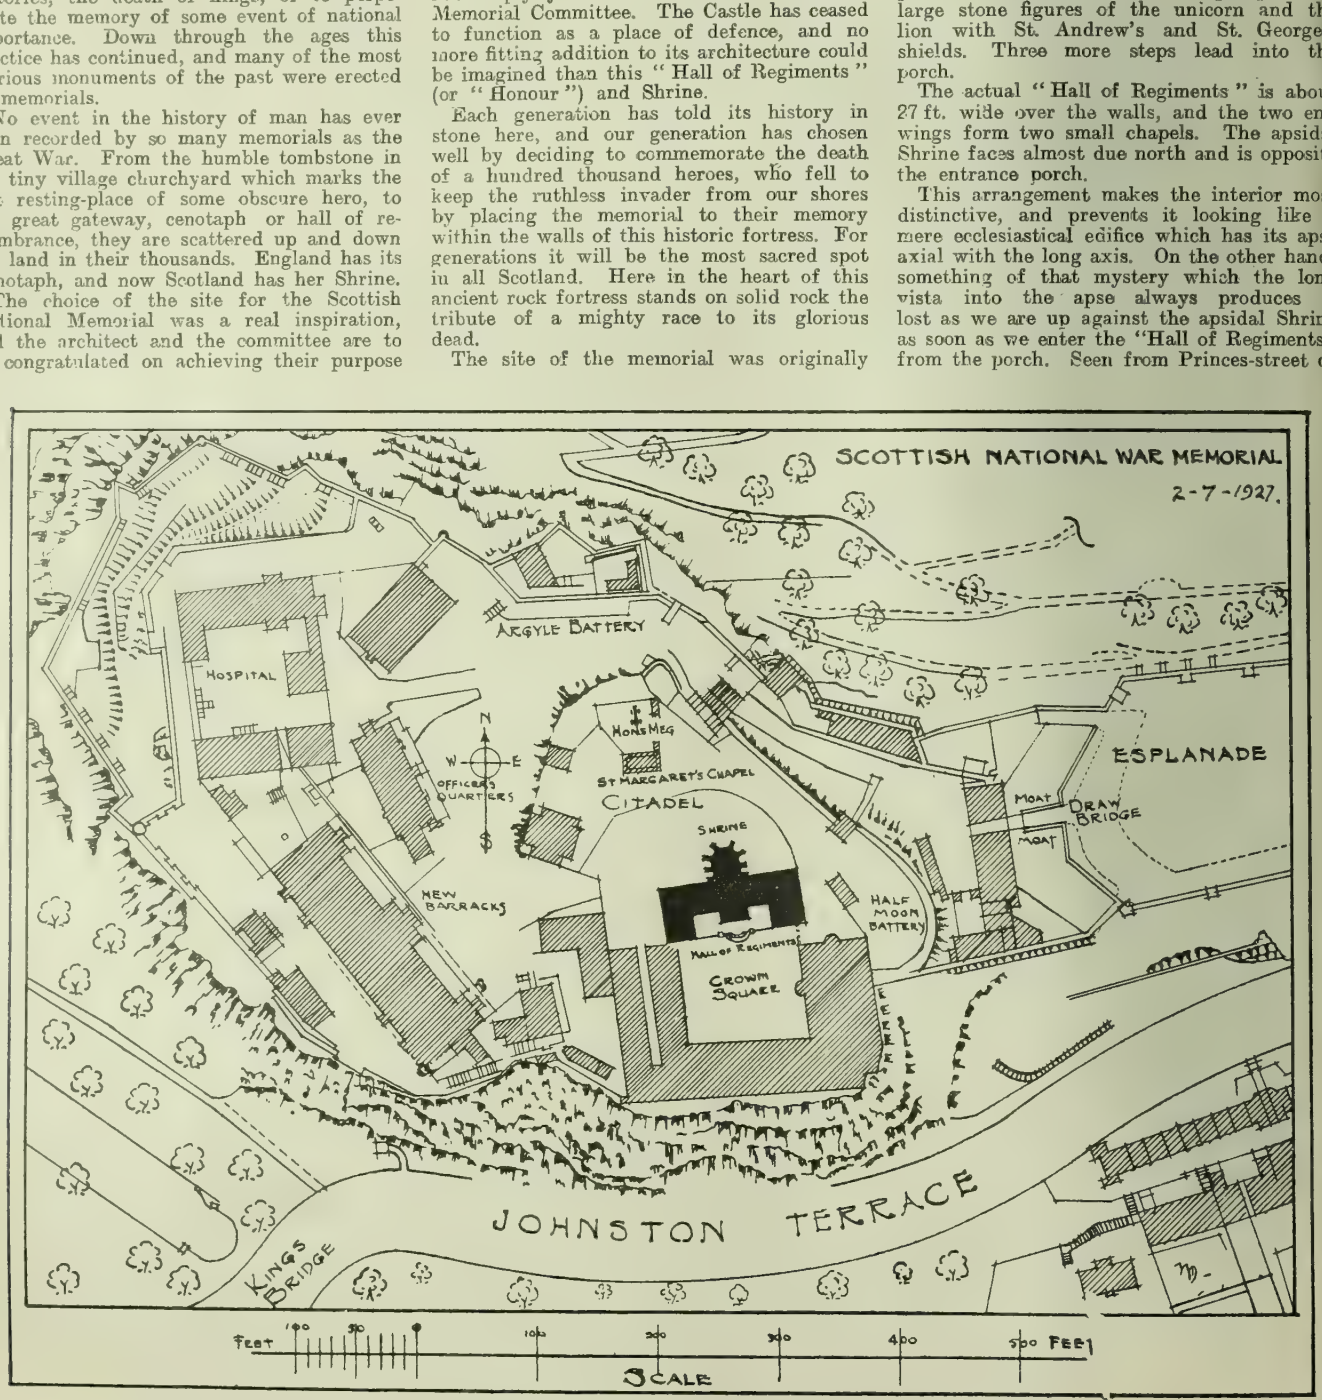
Professor G. Baldwin Brown.

Deeply rooted in the heart of man there seems to be implanted an almost universal instinct, craving or desire to erect memorials. The Egyptians and Israelites rarely missed the opportunity of erecting a cairn, pyramid or memorial of some kind to commemorate victories, the death of kings, or to perpetuate the memory of some event of national importance. Down through the ages this practice has continued, and many of the most glorious monuments of the past were erected as memorials.

No event in the history of man has ever been recorded by so many memorials as the Great War. From the humble tombstone in the tiny village churchyard which marks the last resting-place of some obscure hero, to the great gateway, cenotaph or hall of remembrance, they are scattered up and down the land in their thousands. England has its Cenotaph, and now Scotland has her Shrine.

The choice of the site for the Scottish National Memorial was a real inspiration, and the architect and the committee are to be congratulated on achieving their purpose in the face of much opposition. Across the sky for nearly a thousand feet stretches the outline of this great rock fortress. Kings, queens, princes, and nobles have lived and died within its walls.

With Stirling Castle, Edinburgh Castle will ever rank as an abiding memorial to the martial greatness, chivalry, and romantic instincts of the Scottish race. War is ever a curse, but out of it the emotions have been sublimated into that fervid patriotism from which has flowered some of our finest romantic architecture and art. Over seven hundred years have gone to the making of the skyline of Edinburgh Castle, and it is little wonder that the proposal to alter it by the erection of this national Shrine met with great opposition. Nevertheless the result has amply justified the action of the War Memorial Committee. The Castle has ceased to function as a place of defence, and no more fitting addition to its architecture could be imagined than this "Hall of Regiments" (or "Honour") and Shrine.



Each generation has told its history in stone here, and our generation has chosen well by deciding to commemorate the death of a hundred thousand heroes, who fell to keep the ruthless invader from our shores by placing the memorial to their memory within the walls of this historic fortress. For generations it will be the most sacred spot in all Scotland. Here in the heart of this ancient rock fortress stands on solid rock the tribute of a mighty race to its glorious dead.

The site of the memorial was originally occupied by the old church of the Castle. Towards the end of the eighteenth century this church was converted into an ordnance store, and, later still, Billings the architect erected barracks commonly known as "Billings' Buildings." These stood on the north side of the Crown Square, and the shell or outer walls of this block have been retained as the main boundary of the "Hall of Regiments." From the centre of the north or outer wall the apsidal Shrine projects and forms the main feature on the north front.

In plan, the general outline of the memorial takes the form of the letter E, the centre stroke forming the entrance porch from the Crown Square. The total length of the north and south fronts is about 120 ft., and of the east and west elevations about 47 ft., while the two flanking wings towards the Crown Square are about 30 ft. wide. These flanking wings are continued by a low parapet wall towards a circular flight of five steps which form the approach to the entrance porch. On the ends of these parapets are large stone figures of the unicorn and the lion with St. Andrew's and St. George's shields. Three more steps lead into the porch.

The actual "Hall of Regiments" is about 27 ft. wide over the walls, and the two end wings form two small chapels. The apsidal Shrine faces almost due north and is opposite the entrance porch.

This arrangement makes the interior most distinctive, and prevents it looking like a mere ecclesiastical edifice which has its apse axial with the long axis. On the other hand, something of that mystery which the long vista into the apse always produces is lost as we are up against the apsidal Shrine as soon as we enter the "Hall of Regiments" from the porch. Seen from Princes-street or

Scottish National War Memorial: Plan of the Site.

the Mound, the Memorial occupies a commanding position, and adds greatly to the interest and beauty of the skyline of the Castle. Although there is no doubt some good reason for it, the straight drop from the apex of the crow-stepped gable of the apse to the roof of the "Hall of Regiments" is unfortunate. This "Hall of Regiments" has a battlemented wallhead and a flat roof. The inner wall (or wall over the arch into the Shrine) is carried up through the roof and finished with a crow-stepped gable. This break between the two roofs destroys the unity of the general mass and composition which is found in the traditional treatment when a transept or chapel roof runs into the roof over the main apartment. (We know about the little window in the gable lighting the Shrine.) It may be that such a mass would have competed unduly with the higher buildings with the flag turret which occupies the east side of the Crown Square.

Approaching across the Esplanade, the Memorial is seen rising over the Half Moon Battery and the Shrine is almost central over the drawbridge. A long incline and flight of steps lead up to the plateau or citadel in front of the Shrine. Within twenty yards of the Shrine stands the little Norman chapel of St. Margaret, which dates from the twelfth century, and which is only about 26 ft. by 10 ft. inside. To the north of this chapel on the battlements stands "Mons Meg," the "Big Bertha" of the fifteenth century. The name of Mons will ever be associated with the most glorious deeds of the Great War, and there is something poetically romantic about the whole setting and composition on this historic plateau.

The first design for the Memorial took the form of a great octagonal shrine with cloisters towards the Crown Square. From these cloisters a porch gave entrance to the octagonal Shrine. This design was purer in style, being truer to Gothic types but less national in character. The reasons for this design being abandoned need not be discussed here. The architect, Sir Robert Lorimer, is to be congratulated on the distinctive Scottish character of the executed design.

Although we do not recall a precedent for a memorial of this type, we have, in two other great rock fortresses, buildings occupying somewhat similar positions. The private chapel at Warkworth Castle has an apsidal end growing out of a rocky base, and in the outer courtyard at Stirling Castle the palace faces an open quadrangle.

The retaining of the shell or outer wall of "Billing's Buildings" was a wise one, as it insured a harmony of texture with the other buildings surrounding the Memorial, but it must have added greatly to the difficulties which the architect has had to overcome. The apsidal Shrine, porch and other new stonework is from Doddington quarry, and is of a soft, pinky colour. The Memorial has taken about five years to complete, and it will form a great landmark in the history of Scottish Arts and Crafts. Here the picked craftsmen and craftswomen in the east of Scotland have been united under the direction of one of the ablest designers of our time, and we should hear less about the feebleness and decadence of modern art when this notable Hall of Regiments and Shrine has been thrown open to the public.

Criticism is easy, but futile unless the critic has some understanding of, and is able to visualise, the almost unsurmountable obstacles which must have strewn the progress of such a work as this. The controlling of the individualistic tendencies of the various craftsmen; the explaining of the symbolic and allegorical motifs; the turning of a deaf ear to the untutored opinions of those in high places and to the clamour of a still more untutored populace—all these and much more must have added to the burden of the mere designing of this Memorial. The true inner meaning of such work as this is the secret of the designer and of him alone, and if he knows his business, the meaning must ever be deeper than can be grasped by any other.

Scottish National War Memorial: Detail from East End of "Hall of Honour."

Herein lies the mystery, charm, and fascination of all great works of art.

To the purist, steeped in Greek refinements, Roman scales, Renaissance eclecticism, and the fairy inventions of English and French Gothic, the design of this Memorial must be somewhat disconcerting, and it can only be understood when taken in its relation to that typical blending of Gothic and Renaissance motifs peculiar to certain periods of ecclesiastical and fortress architecture found only north of the Tweed. Of this type the Memorial is in the true line of evolution. It is therefore a real step forward in the progress of Scottish national art. When time has deepened the mystery of its meaning, and legend and story have gathered round it, it should continue for many generations to inspire and instruct the Scottish race.

As some future fanatic in symbolism may possibly assume that the form of the plan (the letter E) has some symbolic meaning (such as Evermore, Eternal, or some similar significance), it might be well to emphasise the fact that, with the exception of the entrance porch and the apse, the external walls are the walls of the barracks erected by Billings, the architect.

To continue the description of the Memorial, let us begin with the south front, facing the Crown Square. From its relation to the surrounding buildings of the quadrangle, the height of this front appears to be about 39 ft. to the lower stepping of the battlements. The left or east wing consists mainly of the original random rubble walling, in which has been inset a large, shallow, segmental niche with bottle and cavetto jambs, heavily moulded corbel course, small cornice over and moulded receding water table. The niche has a segmental arch with pateræ and heavy cusping. The bottle jamb is crowned by large caps, boldly carved with lion and monkey figures. The shell-like corbels at the top of the outside cavettos of the jambs may be thought somewhat feeble in idea, but are very effective as part of the general composition. Beneath this cusped niche the crest of the R.A.F. is placed, and is surrounded by a laurel wreath. A mailed figure of Valour occupies a position in this recess, and is placed on a small corbel bracket. The scale of this figure is skilfully arranged, so as to carry the rhythm of the figures in the small niches in the first story in the recesses at each side of the entrance porch through the whole front, and also, no doubt, to prevent competition with the great figure in the deep recess over the main door.

These and other such subtleties found in this work could only have been seized upon by a master mind to produce that harmony of design which, with continued examination, explains what appear at first sight certain grotesque irregularities in the scale of various parts of the Memorial. In the recess, or small courtyard, to the left of the entrance porch, the random rubble wall is pierced by two windows on the ground floor. These windows light part of the interior of the Hall of Regiments, and are round-headed with a fringe of five cusps. Over and between these two windows a small round-headed niche contains a small figure of Peace on a pedestal corbel. The face of the entrance porch is of irregularly scabbled ashlar. The round-headed entrance door has moulded jambs of the Perpendicular type, and the keystone is of a semi-Renaissance type. This keystone seems much too heavy until studied in relation to the colossal figure in the deep recess over the entrance door. In a frieze over the doorway is the inscription, in large raised lettering:—"To the Glory of God, and in memory of Scots who fell, 1914-1918." The outer piers of this porch are carried up round the deep recess, which is heavily cusped with trefoil cusping on the inner curve of the segmental arch. The capitals are large in scale, and depict, on the left, the lion and the eagle, and on the right the lion and the lamb. Miss Phyllis M. Bone, who is responsible for the modelling of these and similar carvings of the Memorial, shows herself to be a spiritual descendant of the great Gargoyle makers and carvers of the Angel Choir at Lincoln, Wells Cathedral, West Walton, Stone Church, Kent, Christchurch Priory, and Chartres. The deep recess over the porch is stepped back by a series of steep water table courses, which form a sill. In this recess there is a colossal figure by Mr. Percy Portsmouth, standing on a basket-shaped carved corbel. There is a feeling of brooding mystery about this figure, with its face shrouded in gloom. Time would be required to understand all that it means, with its classic and mythological attributes, but it suggests the wonderment of the angels at the madness and folly of man with a suggestion of calm, patient waiting till the mystery of the ultimate salvation of man is finally accomplished. In a central panel over this recess is the Scottish Arms, while the colossal gargoyles and corner finials are somewhat reminiscent of similar work at Stirling Palace and Mar's Lodging.

The small courtyard to the right of the entrance porch repeats the features of that to the left, but the figure in the small niche in the first story is in this case the figure of Mercy. The right or east wing repeats the design of the west wing, but in this case the capitals on the shafts of the recess are the Elephant and Hound. The figure of Justice occupies the corbel in the shallow niche,

Under the niche cove is the crest of the R.A.M.C., surrounded by a laurel wreath.

Proceeding under the old flying buttress arch at the nort-east angle of Crown Square, we come to the east end of the Hall of Regiments. The main feature here is a triple arch arcade, the centre bay of which repeats the large, shallow, segmental niches on the south front, while the two side bays of this arcade are windows which light the east end of the "Hall of Regiments." The figure on the corbel is a monk with an open book. To the right and left of this arcade are placed the crests of the Army and Navy, surrounded by laurel wreaths. On the water-table intake over the cornice of the arcade a Tudor Rose, a Thistle, and a Fleurs-de-lis are carved. The saddle bars of the stained-glass windows are subtly spaced with four roundels down the centres.

The north front of the Memorial, with its richly proportioned apsidal Shrine, faces an open space, on the other side of which stands, on elevated rock, the ancient chapel of St. Margaret. The first feature at the east end of this north elevation is a panel with the crest of the 52nd Lowland Division, then a shallow cusped headed niche similar to those on the south elevation with a small figure of a woman with a child, on a bracket in the centre. Next comes a panel with the crest of the 51st Highland Division, and in the centre of this elevation the noble Shrine. In the plan, which we reproduce, the arrangement of this Shrine is clear. The overall measurements of this apsidal Shrine are about 29 ft. projection, and about 26 ft. across over the solid of the walls, with the buttresses projecting beyond. Six full buttresses and two three-quarter buttresses separate the seven windows, which harmonise in treatment with the shallow niches already described. Taking Warkworth Castle private chapel as a mediæval type of such a feature, we here see how Sir Robert has, through his Thistle Chapel at St. Giles' Cathedral, evolved a masterly twentieth-century apse with a happily arranged combination of architecture and sculpture. The photographs show its features, but no photograph can do justice to that subtle play of light and shadow which falls across its buttressed walls in a morning or evening light. The little Cambridge Renaissance touches in the shields on the faces of the buttresses are most happy. The position of the gargoyles on the ingoes of the buttresses is most unusual, but the central carved figure panel is finely placed and perfect in scale. We should like to know what this Memorial cost; but whatever it cost, it certainly is worth it.

The stone pyramid roof of the apse, with the gabletes of the buttresses, makes an excellent skyline. To the right of the Shrine is a panel, with crest, of the 9th Scottish Division, the cusped, canopied niche being repeated, and another panel with the crest of the 15th Scottish Division is situated on the extreme right. The west end of the Hall of Regiments is similar in design to the east end, with variations in the crests, caps and central figure.

Returning to the Crown Square, we ascend the flight of circular steps, flanked on either side by the Unicorn and the Lion. These are treated with Miss Bone's usual breadth and vigour, and while somewhat angular in treatment, they should look all right, hoary and venerable, in about 200 years.

The porch is lit by two circular-headed windows, one on either side. On the inner lintel is carved the vine pattern, to symbolise Immortality. Over this inner door is a panel with the pelican feeding its young, to symbolise Sacrifice. Between this panel and the lintel are carved the words "Lest we forget." The roof of the porch is groined ribbed, and the centre boss shows an angel receiving the dead hero into Paradise, somewhat reminiscent of a similar subject on the Bridport tomb in Salisbury Cathedral. From the inner door of the porch we look into the Shrine, which is enclosed in a finely designed wrought-iron grill with high side standards. This grill, with the black silhouette of its pattern, emphasises the colour and beauty of the seven stained-glass windows of the Shrine.

The floor of the Memorial is paved with squares of grey-green Ailsa Craig granite, and through the floor of the apsidal Shrine appears a projection of the naked castle rock. The golden book, containing the names of the hundred thousand men who fell in the Great War, will be enclosed in the steel casket presented by His Majesty the King and placed on the altar on this projecting rock.

Suspended from the rib-vaulted roof is a carved-oak coloured figure of St. Michael, representing the spiritual struggles of man. This figure is somewhat foreshortened by the height at which it is placed and the shortness of the vista of approach. Mr. Jackson modelled this figure, and it was carved by those masters of wood carving, the brothers Clow. In the tympana of the seven windows the emblems of the planets are carved. They are masterly in composition and show a deep understanding of the mythological and symbolic emblems of the Greek gods. Dr. Douglas Strachan, who designed these, is to be congratulated on his understanding of the limitations of the material. He is also to be congratulated on the great beauty of the windows. Here we see modern stained glass at its best. The perfection of the craftsmanship, the beauty of the colour, the searching understanding of, and the ethical interpretation of, the best in the spirit of our time, places these windows in a class apart. To interpret the ideals of our time in the spirit of the mediæval men should be the main purpose of modern art. Few seem to attempt it, and very few come near success when they do attempt it.

The subjects of the Shrine windows are:—The two windows on the west wall (The Birth of War); the two on the east wall (War Overthrown); the group of three to the north-west, north, and north-east (Peace and Praise). In the first group is the killing of Abel by Cain, the first recorded man to discover the tragedy of strife. Space will not permit of a detailed analysis of these fine examples of modern stained-glass art, and it must be long before the most enthusiastic student of this Memorial exhausts the wealth of mythological, symbolic, allegorical, heraldic and spiritual motifs embodied in this national Shrine. The bronze reliefs on the lower portion of the walls of the Shrine show a procession of all types of figures and animals which took part in the war. These were carried out by Mr. and Mrs. Meredith Williams.

Historically, the value of this work is great, as it shows in a realistic manner the costumes and accessories of modern warfare, but the difficulty of translating these in terms of art is great Mr. and Mrs. Meredith Williams have succeeded in giving an interest to what might have been a tame photographic representation. In a processional frieze of this type a rhythmic repetition of a similar element, such as Benozzo Gozzoli used in his famous Riccardi Palace painted processional frieze at Florence, is the only solution. Over this bronze frieze, and under the windows, runs the inscription: "The souls of the righteous are in the hand of God. There shall no evil happen to them. They are at peace." The altar is inscribed with the words: "Their name liveth for evermore."

The entrance to the Shrine is flanked by devices bearing the Arms of the "Outposts of the Empire in the East" and "Outposts of the Empire in the West." In the south gable over the entrance to the Shrine, a small window is so placed that at noon a beam of sunlight is thrown into the Shrine.

The lack of cross joints in the infilling of the vault of the Shrine seems to detract somewhat from its stony appearance, but as these spaces are so small this would have been a matter of some difficulty. The seven stained-glass windows in the Hall of Regiments add greatly to the beauty and mystery of the lighting. They are dedicated to the various services—Naval, Air Force, Women's services, in various departments (nursing, transport, munition, land, etc.), and so on. In the chapel in the east wing bronze panels to the Gunners and Engineers are placed. These are by Mr. Alex. Carrick, and are carried out in a vigorous and spirited manner. The composition has been carefully considered, and the look of grim determination on the faces of the gunners in the Gunners' panel, where the gun is seen in action, is a piece of artistic realism which is justified by its success. Mr. Carrick, as an ex-gunner in the Great War, has concentrated his experiences into this panel, which is about 7 ft. by 5 ft., in a most vivid and telling manner. Some portions of the work give the impression of having been a little hurried, but this was inevitable when working against time for a date for completion. Contrasting the carrying out of this work with that of mediæval times, we must remember that a decade or two in the completion of such work in mediæval times seemed to be a matter of little importance. To have accomplished this work in the space of five years is a great achievement and speaks well for the possibility of collaboration of all the arts even in these individualistic days. The vault of the Hall of Regiments is barrel vaulted with stone arches thrown across between the bays. The effect and scale are somewhat spoiled by the lack of stone vault infilling, the barrel being in concrete. It may be intended to cover this with mosaic, but of this there is so far no evidence. The bays in the Hall of Honour are dedicated to various regiments. These bays are flanked by octagonal columns with caps of a primitive floral type somewhat reminiscent of those in the nave of Genoa Cathedral, the caps of the cloisters of San Zeno Maggiore at Verona, and the cloisters at Certosa di Pavia, near Milan. The key-stones in these arched bays are again of a semi-Renaissance type.

Much might yet be written about the various heraldic and other decorative features, but enough has been said to show that, given the money, we have the men and women working in the arts and crafts to-day who, under a master architect who understands the union of the arts, can produce work worthy to commemorate the great achievements of our age.

Sir Herbert Baker was right when he said the other day that:—"*An architect is only the instrument and interpreter of his patrons, and the patrons are only the interpreters of the spirit of their time.*"

He may have been equally right when he said that:—"*It is great encouragement and not criticism that produces works of art.*" Certainly encouragement is not overdone to-day. The artists and craftsmen cannot be named individually, but all who have contributed to the success of this noble Memorial deserve the thanks of the Scottish people, and when it is opened by the Prince of Wales on July 14, a great pilgrimage will begin from all parts of the British Empire.

No article on this subject would be complete without a note of appreciation to the builders who, we understand, were the firm of Messrs. Neil McLeod & Sons, for the excellent manner in which they have carried out their contract. To Sir Robert Lorimer for his interpretation of the best in the spirit of our time in this his latest and finest addition to Scotland's national monuments, the thanks of the nation are due.

Law Society's Hall.

During the last year the Law Society's Hall and Common Room have been enriched by the stained-glass armorial bearings once belonging to Serjeants' Inn. When the Society of Serjeants-at-Law was dissolved, 50 years ago, the Hall was bought by Mr. Serjeant Cox, who carefully preserved the glass at Mote Hall, his residence at Mill Hill. Last year the Law Society was presented with the glass by the purchasers of the property at Mill Hill, and, at a cost of approximately £2,000, it has been substituted for the plain glass formerly used in this building.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

Salaried Architects and Private Practice.

Sir,—The letter signed "At Spes Non Fracta," in your issue of June 24, is exactly the type of letter I hoped to see on the above subject, for, to my mind, the writer ably represents the short-sighted views of the profession generally. I agree with him that "any system which injures the majority for the benefit of the few must be strongly justified"; the present system of preventing architects from combining private work with an official appointment, and vice versa, does so. There are hundreds, perhaps thousands, of official appointments where incompetent surveyors and engineers do architects' work. I want all those appointments given to local architects in private practice, and that can only be done by allowing official architects to do private work. I made no suggestion that assistants or "minor officials" should do so.

The author of the letter will, I hope, pardon me in saying that a part of his letter is unworthy of a man who wishes to be taken seriously; he writes, "a few outstanding men who have, more by accident than choice, stumbled into Government posts." I am in no way connected with a Government department, and know very few men who are. I do not know one intimately, but such a statement on the face of it must do the writer more harm than good; it is simply silly; how does he know? Someone must have chosen the men or they could not be in the public service.

Architects as a body seem to try and do all they can to prevent members of the profession from getting work and improving their incomes. Some years ago there was a general outcry that architects were not to do any work such as dilapidations, quantities, etc. We were told that such work was not architecture, which is quite correct, but not very comforting for a young married man with a family. But, on the other hand, I remember a great architect, now dead, who gave exactly the opposite advice. He said a young architect should do any surveyor's work he could get hold of; and I want to see the system of young local architects, in private practice, accepting official surveyors' appointments, but the narrow-minded views of your correspondents and others are very powerful in preventing it.

I agree the matter is far from simple, quite the reverse, but we must break down the prejudice of the majority before we can benefit the profession generally. I am asked how I "explain the widespread feeling in the profession at the growth of this seemingly unjust practice." My answer is that architects are so shortsighted they cannot see beyond the end of their noses; at the same time I do like his word "seemingly.' D. S.

Architects (Registration) Bill.

Sir,—In your issue of July 1 you are good enough to give extracts from the evidence which I gave on behalf of the Institute of Builders before the Select Committee on the above matter.

In this extract there appear the following question and answer:—

"The Chairman: This is, of course, an Architects' Registration Bill and not a building society Registration Bill. You have no objection to the Bill as far as it promotes registration of architects?—No, not at all."

The question and answer were, I believe, as follows:—

"This is, of course, as you know, an Architects' Registration Bill; it is not a Builders' Bill?—That is so.

"And I gather from what you have said that you have no objection to make, so far as it promotes the Registration of Architects; you would not object to Architects being registered?—Not at all, Sir."

As, however, the opposition to the Bill in its first and second forms by the Institute of Builders is fairly well known, and the above quotation from an extract of evidence might wrongly indicate that their attitude has changed, will you allow me to explain that in my answers to the Chairman's questions, summing up their evidence, I understood his question to be limited to elicit the fact that we had no objection to registration, or to the Bill in its amended form, so long as registration is voluntary, and so far as the Bill promotes fairly the voluntary registration of architects.

Technically, I suppose, the Bill is still in accordance with the document before the House at its second reading. But it was only given a second reading upon an undertaking given that the voluntary principle would be incorporated in the Bill: as you know, the first business of the Select Committee was to elicit from the promoters the endorsement of that principle; and our evidence was specifically given upon the basis that it was accepted

To a compulsory measure, or to one which does not pay due regard to the co-operative units of good building, the attitude of the Institute of Builders is precisely where it was.

P. J. Spencer,
Secretary, Institute of Builders.

Statutory Examination for District Surveyors.

Sir,—May I suggest another reason for the lack of candidates for these lucrative posts?

Having already qualified for the R.I.B.A. and S.I., I passed the District Surveyors' examination about 20 years ago, and subsequently applied for every vacancy which occurred up to the year 1923. On reviewing the position then I found that in several cases my applications had been passed over in favour of men who had qualified at a much later date. More suitable men they possibly were, owing to their past experience in the offices of the Superintending Architect or other District Surveyors, but it became evident that the prospects of an "outsider" were extremely remote, and I have never regretted my decision to drop the matter and settle down to

Private Practice.

Babies' Home: Great Barr.

This work was carried out for the Walsall and West Bromwich Joint Unions Committee, under the supervision of the architects, Messrs. William A. Pite, Son and Fairweather. The contractors were Messrs. William Kendrick and Sons, of Walsall; among the sub-contractors were:—Heating and hot water services, Messrs. Young, Austen and Young; electrical work, Messrs. Whittaker Bros.; reinforced foundations, designed by Mr. Harold Cane, M.I.S.E. The home provides accommodation for 43 babies from birth to three years old, with facilities for open-air treatment and isolation. The homes are beautifully situated in Great Barr Park, outside Birmingham.

"Neckfield," Crowborough, Sussex.

This house has recently been erected from the designs and under the superintendence of Sir Banister Fletcher, V.-P.R.I.B.A., F.S.I. It is built with 14-inch external walls, rough cast, and has a brick plinth, the roof being covered with red sand-faced tiles. A feature of the garden front is the formation in the roof over the bay windows of a ledge for window gardening. The accommodation provided is shown on the plans, the domestic offices being contained in a separate wing. The dining-room and study are panelled to a height of 6 ft. 8 in. There are no plaster ceilings to the ground floor, the joists being stained and supporting two layers of floor boards with felting between. The panelling was executed by Messrs. Borst Bros., of Shoreditch, the central heating and domestic hot water services by Messrs. Frederick Hayden, Ltd., of Tunbridge Wells, the casements by Messrs. Crittall. The general contractor was Mr. Harold E. Burn, of Crowborough.

CHARING CROSS BRIDGE PROPOSAL

By A. G. Waller.

This plan follows the same crossing of the River Thames as the scheme recommended by the Royal Commission on Cross-River Traffic in London. It is a bridge combining railway and road traffic and retains the Charing Cross Station, as does the Commission scheme. But there are considerable variations in the approaches to this bridge from those of the Commission.

There are two main problems connected with this bridge. (1) The road-traffic circulation of London. (2) The railway-traffic.

(1) The Road Problem.

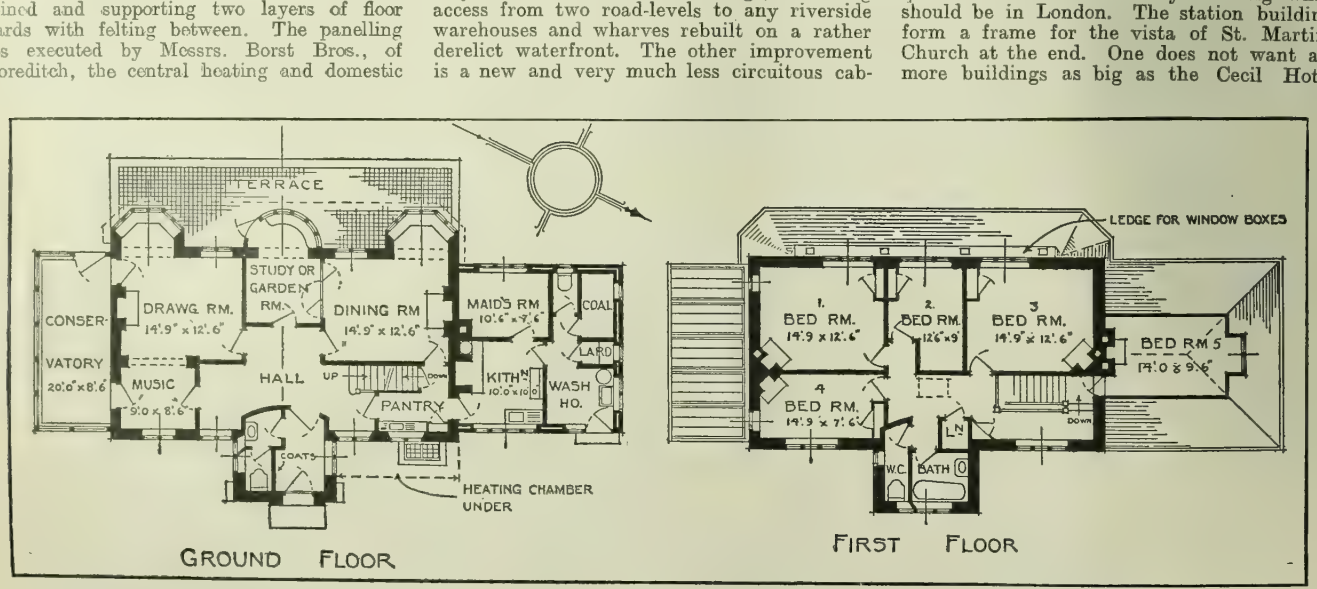
I think everyone is agreed now that on the north side of the river the traffic does not need the Strand as a mode of access. Any traffic wishing to cross the river from the east naturally uses Waterloo Bridge. Any traffic from the Westminster direction uses Westminster Bridge. It is the traffic from the north and north-west which would find a Charing Cross bridge useful. Therefore everyone will be agreed that a viaduct over the Strand would be the solution of a congested crossing such as is found at the Wellington-street junction to Waterloo Bridge. In the subjoined plan there is necessarily a crossing instead at King William-street and St. Martin's-lane. This lane is widened along its eastern side. The only expensive building to be altered (and it may be altered to the better) is the Coliseum music-hall. The front booking-office and stairs are shifted round the auditorium to be at right-angles to its present position, and will thus face the enlarged St. Martin's-place with an improved facade.

The only building in the lane which it is a pity to destroy is No. 43, with its 17th century facade consisting of a Roman-Doric order of carved red bricks. Adjoining on either side are plain houses of the same period which for sentimental reasons one is naturally loath to part with. But the proper retort to this is to raise new ones in the best expression of our own times.

The only features needing pointing out in this article in respect to the southern approach to the bridge is the method of descending to the ground-level in the short space available due to the cramping of the railways. This difficulty is overcome by the use of a helical descent. Incidentally, this may be an increased advantage, affording access from two road-levels to any riverside warehouses and wharves rebuilt on a rather derelict waterfront. The other improvement is a new and very much less circuitous cab-approach to Waterloo Station. Mepham-street is used as an incline to station yard.

(2) The Railway Problem.

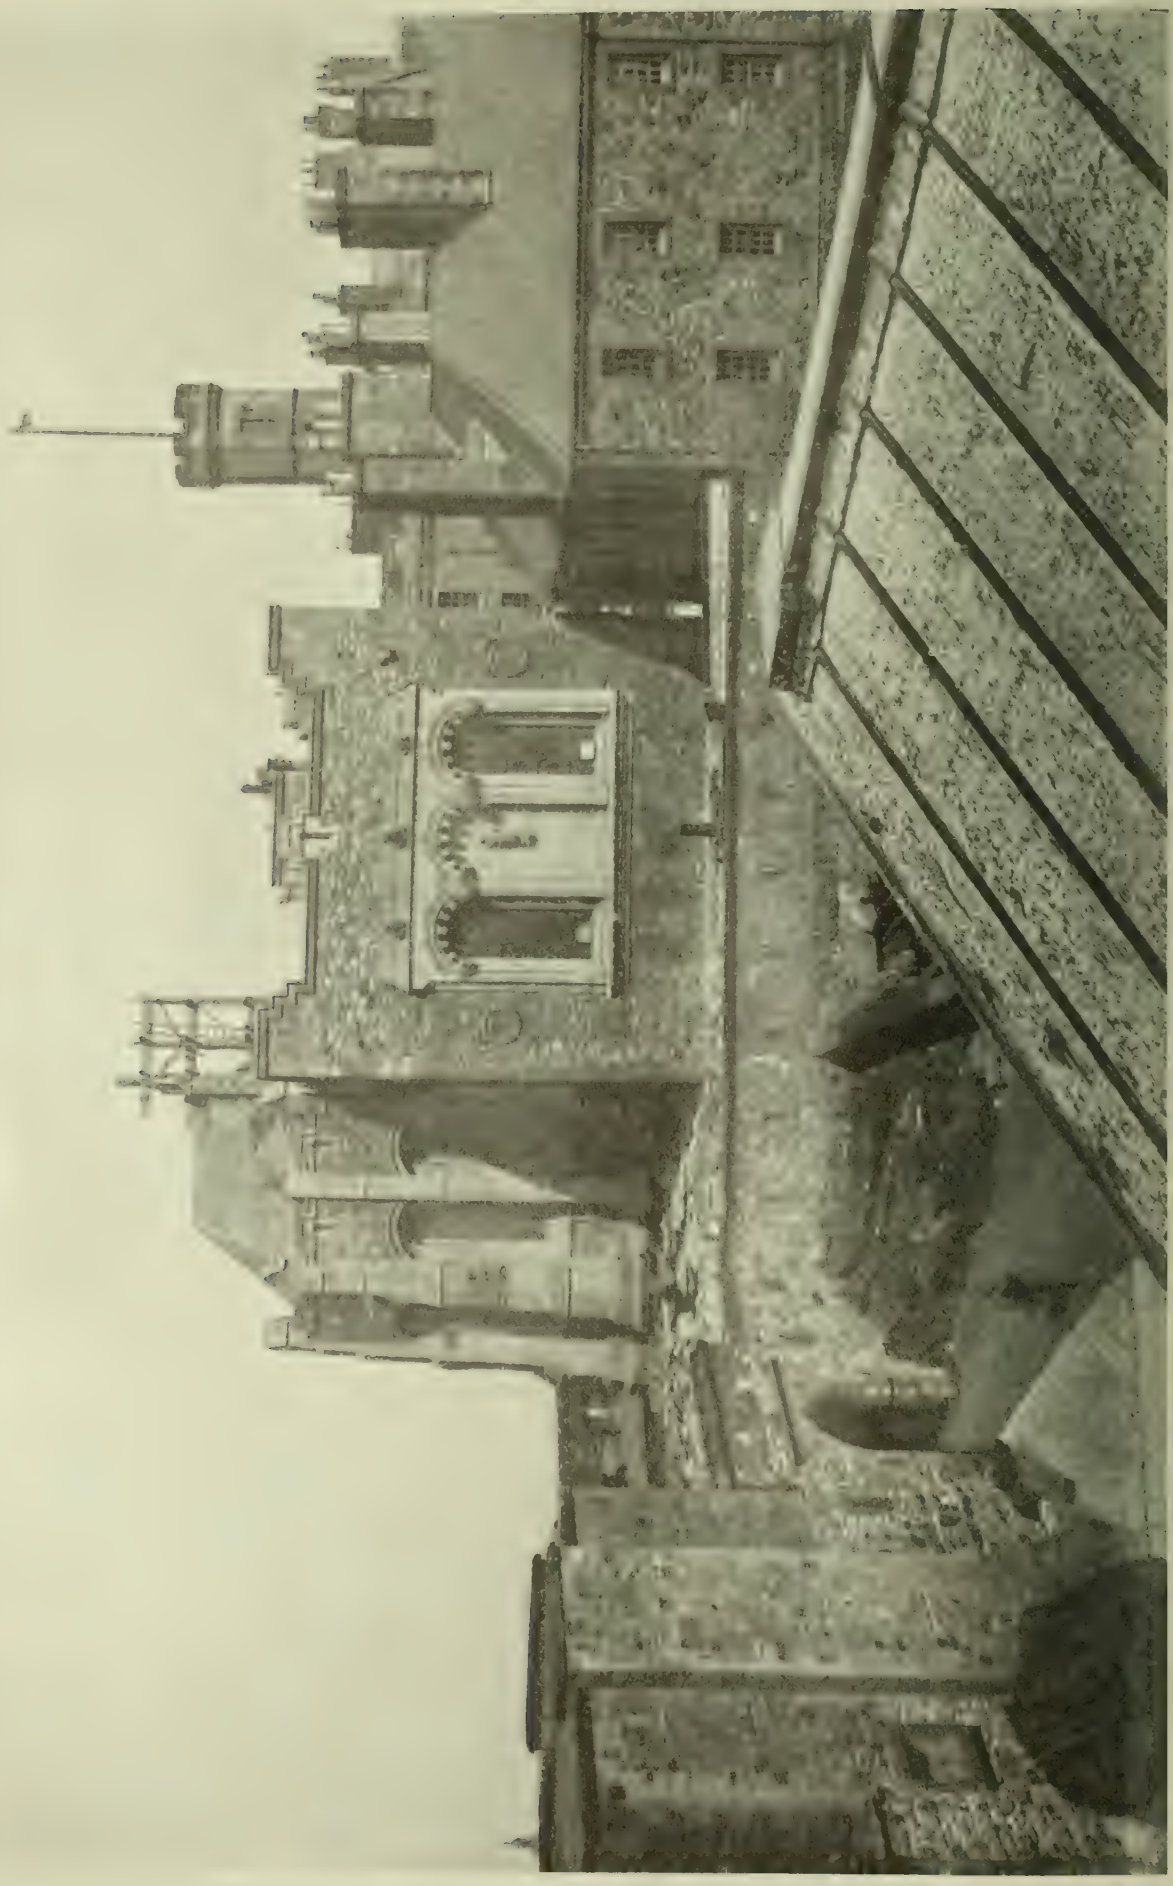
A station with double the number of platforms now provided is not the intention of the Royal Commission. It is assumed that if a station here is necessary, then there should be increased provision for expansion of a useful form of transit. It is inconvenient to prolong the existing station yard along the Strand because of the falling level and also because of increased confusion to traffic. Therefore the cab entrance and exit is given a place all to itself on a "backwater" off the Embankment.



There is no specific provision for station cab-traffic from the south of London, because it is assumed that Charing Cross will be only for suburban traffic. But a cab-stand could be provided on the top level above the platforms.

Underlying the plan is the assumption that railway traffic will eventually increase to this centrally situated suburban station, although at the moment it is argued that this class of traffic is decreasing. There is well-substantiated evidence that motor buses are quicker than trains within about ten miles from the centre of London. This may be so. But when the point of saturation in the streets is reached, the existing network of elevated railway tracks south of the Thames may relieve the streets.

During the war the railways became so congested that the roads came into use again as they had been before the invention of steam-railways. Motor lorries and drivers for them sprang into being, and they have remained and developed still more since the war. Now we have Lord Montagu advocating elevated roads with stations at intervals for motorists. We should have a glut of motor drivers soon if his prognosis is correct. The point of traffic-saturation has been reached in New York, and motorists leave their cars 10 miles from "downtown" and come in the rest of the way by train.



As for the elevation of the bridge, this is shown with 27 ft. headroom for trains, as required in the Commission Report. This is necessary for steam trains, but if the station were only for electric trains, then the headroom could be less. This would naturally modify the elevation as shown. Also one would see more of the general view, and there would be a saving in cost.

The plan retains the general frontage on the line of the old river front behind the Embankment. The height of the buildings over the station are as high as the great hotels in Northumberland-avenue, which is quite at the limit of any building which should be in London. The station buildings form a frame for the vista of St. Martin's Church at the end. One does not want any more buildings as big as the Cecil Hotel.

PARTHENON STUDIES.

By W. R. LETHABY.

V.—THE STRUCTURE.

Site and Quarry.—The Parthenon was situated on the highest part of the acropolis rock and raised still further on a platform of steps. "The temple was so much elevated that the pavement was nearly on a level with the [roof of] the Propylæa." (Leake.)

"High above the ruins of the modern city towers the Acropolis, holding up to the skies the ruined temples of other days. . . . Afar off, almost lost in the distance, rises the Pentelican mountain, from the body of which were hewed the rough blocks which, wrought by the sculptor's art, now stand the stately columns of the ruined temple. What labour was expended upon each column, how many were employed in hewing it from its rocky bed, in transporting it across the plains of Attica, and raising it to the Acropolis! And then what skill and labour in reducing it to a polished shaft, and rearing it where it now stands!

"Moving to the foot of the mountain, which rises with peaked summit into the clouds, we soon came upon the strata of white marble for which Pentelicus has been celebrated for thousands of years. On the roadside were blocks and marks caused by the friction of the heavy masses transported to Athens. The great quarries are towards the summit. The surface has been cut perpendicularly smooth, perhaps 100 feet high, and excavations have been made within to an unknown extent. Within are vast humid caverns, over which the wide roof awfully extends. The appearances of having been once the scene of immense industry and labour contrasts with the desolation and solitude now existing." (J. L. Stephens, New York, 1838.)

Building Traditions.—The present study of the Parthenon will deal primarily with the sculptures because they are before us in the British Museum; these wonder works may be examined closely, and even occasionally and with reverence touched. In the Museum are also several significant parts of the building, including a capital and drum of a column, fragments of moulded and painted members, and an ante-fix from the roof, so that it is possible for students to get into actual contact with the structure. Many stored-up documents also exist of which full use has not been made, and one of my purposes is to call attention to these. I may say here that the time is overdue for a fresh survey of the temple from the technical side, and I do trust some British student will undertake this. Michaelis's work on the Parthenon, which Mr. Arthur Smith, the late keeper of the marbles, calls "classic," has never been translated into English. A new edition of this essential book is much wanted.

Hundreds of descriptions of the Parthenon must exist; here, with as little recapitulation as possible, I shall try to gain for myself, and, if possible, for others, some clear general ideas and imaginations of the temple.

When fresh in its fair marble, bright paint, and gilding, it must have gleamed on its high place, shining afar over the city and country round about. Travellers, as they "went up" to Athens, would have looked for it as we look for a lighthouse.

The Parthenon, the Maiden's House, was the dwelling of the city goddess, the personification of the idea of Athens itself. The structure was the last link in a long chain of building tradition, far drawn out from primitive thoughts and customs, and at the same time it was exquisitely refined. As William Morris well said in his summary survey of architectural history: "The columnar temple, though always built with blocks of stone, is clearly a deduction from the wooden god's house or shrine of the not very remote ancestors of the Periclean Greeks. In fact, rigid conservatism of form is an essential part of Greek architecture as we know it. The narrow superstition of the form of the Greek temple was not a matter of accident, but was the due expression of the exclusiveness and aristocratic arrogance of the ancient Greek mind."

The general theory that in Greek temples, forms which had been developed in a system of building in timber and mud were conserved has been fully established by exploration. Troy, Tiryns, and other early sites have furnished evidence for mud-brick walls with wooden plates and posts. Such walls were set on a stone foundation as are Devonshire cob cottages. The orthostatae or larger blocks at the base of marble walls were reminiscent of this custom, so were antae.

At the very ancient temple of Hera at Olympia, only a foundation course of stones has been found, while the walls had turned to mud. At the ends of walls were upright timbers (antae), and in the time of Pausanias one column of wood still survived. "This exposition of Dörpfeld's (1884) threw light on the connection between Doric temples and the structures of Ægean times. The meaningless double height of the lowest course of stone and the slightly projecting form of the anta proved to be the remains of the old construction of wood and clay. The column had to be completely altered. A connection could, however, be traced in the capital; the torus of the Ægean capital developed into the echinus of the Doric. . . . We are obviously dealing with tradition derived from the heroic age." (Michaelis.)

The long row of stout columns set up around the cella or temple proper came into use as wooden posts supporting an overhanging roof, which protected walls of mud brick. Such an outwork, however, would obviously add to the withdrawn and mysterious character of the holy place; moreover, there was some lingering sacredness in the column itself, it had something of an apotropaic or magic nature. The peristyle was thus a sort of holy railing, and, of course, the columns also added splendour to the small, essential cella. At the same time, the covered way around the cella was doubtless an assembling place, and used for ceremonial processions and other purposes. The mediæval cloister was a peristyle turned outside in. We may accept the peristyles of Greek temples as well justified in reason, and quite understandable even by our modern minds.

Plan and Date.—The Parthenon is especially perfect among temples, even in its plan. In 1830 Cockerell said: "The arrangement of the columns between the antæ appears to have been an invention of Ictinus." On the other hand, the big temple at Selinus, which seems to have been an earlier work, is clearly a variant of the same general type, and, according to Choisy, "the Parthenon reproduces a Sicilian model." The Periclean Parthenon, however, closely followed the plan of the older Parthenon, and this, I suppose, was also imitated at Selinus.

The interior of the Cella was, as has been mentioned, divided by Doric columns into a "nave" and "aisles." The great entrance door was at the east end, facing the sunrise. At the other end the columns were continued from side to side: thus a processional way was formed around the statue of the goddess, which stood well forward on a pedestal that extended almost across the central space. After long discussion as to methods of lighting, it is now agreed that Dodwell and Wilkins were right in holding that daylight was only admitted by the great eastern doorway. The colossal statue of polished gold and ivory would have shone out in the light admitted into the cella through the doorway and reflected up from the glistening marble pavement. It would have seemed, as Miss Jane Harrison has well said, that "the radiant goddess herself was the light thereof." Doubtless, too, there were many lamps. I hope the reader will pause a minute to imagine this interior, with the long lines of Doric pillars and the statue of precious materials which lifted its head, with eyes of flashing stones, almost to the roof.

On the dates of the works, Mr. Arthur Smith's admirable paper in the R.I.B.A. *Journal*, December 18, 1926, and *The Builder*, December 10, 1926, should be consulted. "Work on the Parthenon was begun in the year 447-6 B.C. Payments were made for Pentelicus quarrymen, for transport and for carpenters and labourers, but not yet for masons. There was a monthly fee for the architects." In 442/1 work on the columns is mentioned.

In 439/8 payments were made for quarrying at Pentelicus and to the sculptor's workshops. In 438/7 the gold and ivory statue of Athena was set up in the Cella, "and the essentials of the building must have been in position," including both frieze (or frieze slabs) and metopes which would precede the roof. . . 436/5 was the last time we heard of expenditure at the quarries. In 434/3 wages were still being made to the pediment sculptors. The fifteenth year (433/2) must have been a very brief account. . . . The Parthenon was finished."

Building Methods.—In building a Greek temple, the platform on which it was set was not a mere foundation but a work of importance. Instead of the walls having hidden stepped footings—visible expanding steps—edged the whole platform, and the upper course of this platform was laid in relation to the walls and columns which were to stand upon it. At the Parthenon the Cella is raised two steps higher than the peristyle. The lowest course of the walls is formed of large blocks twice as high as the rest. The walls are built with courses of headers going right through the thickness, alternating with doubled stretcher stones, having a space between them (Fig. 1). The blocks of walls, columns, and entablature are assembled together by iron dowels and cramps set in lead;

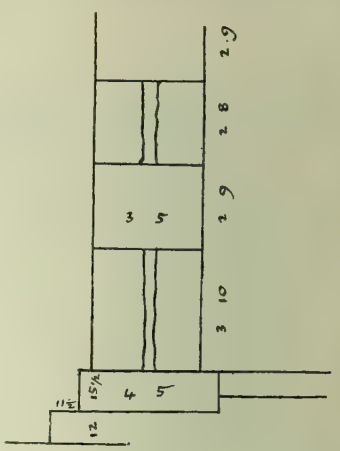

Fig. 1.

and these iron fixings have occasioned the usual damage. A capital from the Propylæum in the Museum gives evidence in regard to the bursting power of iron, and should be inspected.

In the upper surface of the Parthenon capital at the Museum may be seen the remains of the iron dowels (small square plates set in on edge) which came at the heading joints of the architrave blocks. As Wilkins said: "The want of cement was amply supplied by the liberal use of iron cramps of two kinds. One sort was used for uniting the blocks of the same course, and the other for connecting the superincumbent with the course below it. The first resembled H protracted so as to be eleven and sometimes fifteen inches in length. The others were plates of iron five inches in depth, three in width." Two plates of this kind, he adds, were usually inserted between the joints of the columns. As such dowels would preclude the grinding of the drums on one another by revolution as has been suggested, I asked my friend, Mr. Troup, who was about to visit Greece, to examine the point. At the Par-

thenon he only found the holes five inches square at the centre of the drums for the wooden dowels, "but almost every drum I have seen, large and small, at Olympia, Epidauros, etc., have both the central dowel hole and two other dowel holes. Those of the Temple of Zeus at Olympia have the two iron dowels remaining which had split the marble." At Olympia then and other places it was not possible to revolve the drums on one another. In the bursting force, moreover, of iron, we doubtless find the reason why the big central dowels at the Parthenon were of wood. In some later works, such as the Mausoleum, bronze dowels were used. Mr. Troup has also given me the sketch of the base of the Cella walls (Fig. 1). Not only were there spaces between the stretcher stones of the cella walling, but in the construction of the entablature, wide spaces were left void which lightened the weight considerably.

Some of the marble blocks on the Acropolis have, Penrose says, holes made for "lifting shears": such holes or cavities dug in it at an angle may be seen on a cornice block from the Propylæum at the Museum (Fig. 2, B).

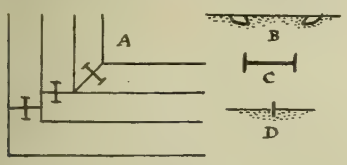

Fig. 2.

Here also may be seen cavities for the long ⊢ shaped cramps (C). The tympana of the pediments were plated over with very large thick slabs, set vertically. The pavement was of marble slabs about eight inches thick, with deepers blocks under the columns. Some traces of the internal columns may, according to Baedeker, yet be traced. Many years ago there was an account in the American Journal of Archæology of "pry-holes" in the blocks to assist in fixing them, and I believe Wolf's notes at the R.I.B.A. contain some observations on the same facts. (Fig. 2, D, shows the iron dowels.)

In examining the faces of the finished marble work, two or three varieties of surface are found: smooth or polished, and finer or coarser work, done with claw tools or a "drag." The background of the frieze has very fine grained work, and so has the draperies of some of the big sculptures. On the top of the capital are the marks of a coarser claw tool. The care with which beds and joints of masonry were wrought is well brought out in the Lebadea specification discussed by Watkiss Lloyd (*The Builder*, April 28, 1877). Here the use of claw tools is mentioned, one being "a close-clawed sharpened tool." Testing joints by means of a straight edge or canon was required so that they should be "straight level and smooth"; some of these canons were as much as 20 ft. long, others were of stone, and these doubtless were wide plane surfaces. The canons were smeared with vermilion, which came off on any part of a tested surface which was higher than it should be. Mr. Arthur Smith tells me that the word *Kanon* seems to have been used "both for a long wooden implement and for a testing surface of stone."*

Columns.—Penrose thought that the close jointing of the drums of the columns had been obtained by grinding them around one on another. There would, however, have been difficulties in doing this beyond the question of the dowels just discussed. The capital obviously had to be brought to a position exactly foreseen. Owing to the inclination of the columns indeed this is equally true of the drums also, unless each was put in place much larger than the finished diameter and dressed down later. As L. Magne observed, the axis of revolution did not coincide with the axis of the column. Again, the leverage of such rotation done from a high scaffold would have been very great, and I should think prohibitory. I could rather suppose that the drums were rotated on a rubbing table before being put in position. The red dressing which Dodwell observed in the beds of a column of the Propylæum is a confirmation of this view. The capitals seem to have been finished with a revolving trammel of some kind.

"The columns, like those of the Propylæa, diminish from the bottom to the top in a line which is slightly curved." (Wilkins, 1816.)

The columns are "fluted." Such vertical channelling of the surface provided continuous strong lines of shadow rising in the functional direction and crossing the more accidental joints of the several pieces of stone of which the column was made up, and thus unifying it. The purpose of such fluting is analogous to the small mouldings of Gothic piers and arches. There were twenty flutes, and this number gives an edge—or most projecting part—under the angles of the square abacus which crowned each column. It is said that the flutes, although they narrow by the diminution of the shaft, are not less in depth at the top than below.

The Doric capital is certainly a descendant of the Minoan or Ægean type. The essential parts are a square abacus occupying the upper half of the block, while the lower half is rounded in plan. Thus the capital was shaped by elementary masonry procedure. There is no mystery of æsthetic design in taking a square block and working the bottom half round so as to conform to the shape of the column. This lower part was first worked to a chamfer plane. "There are several unfinished Doric capitals on or near the Acropolis which show that the echinus [or lower round part] was developed by a chamfering process" (Hambidge, and Fig. 3). This lower part was finally given a slightly swelling bowl-like form which is so reasonable

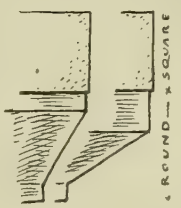

Fig. 3.

that it would not seem to need any explanation were it not that it has received the name of "echinus." The curve of this echinus approximates so closely to the chamfer line that it is evident it was an outcome of practical masonry procedure.

The refined hyperbolic curves that books tell of arose not as mysteries of design but as economy of labour. Fig. 4 gives the profile of the capitals of the Parthenon. See how closely it coincides with a straight line (B). Earlier capitals had the preparatory chamfer lines at a less angle than later ones (Fig. 3). The Propylæum, which was built a little later than the Parthenon, has similar capitals, as may be seen at the Museum, but the angle is a little steeper. At the temple of Bassæ, which is generally said to be nearly contemporary with the Parthenon—from the legend that it was built by the same architect—the capitals which may also be seen at the Museum, have a much steeper profile and are cruder. This is one of many points that convince me that this work must be at least a century later than the Parthenon.

In capitals of the Ægean type there was often a gorge or hollow between the top of the shaft and the bigger rounded moulding above. In the mature Doric type there were several little hollows instead of one big one. At the Parthenon these little mouldings are of great delicacy, and seem to bind round the head of the column like a band of cords. At the same time they fall in the general chamfer line and were easily obtained (Fig. 4).

Entablature.—In the Museum has recently been set up a cast of one angle of the pediment and the entablature with the upper part of a column. The stone beam or epistyle was made up of three parallel rows of stones. Such stones were doubtless more easy to obtain, and they certainly were lighter to deal with than blocks the full size of the beam. At the angles the two inner rows had

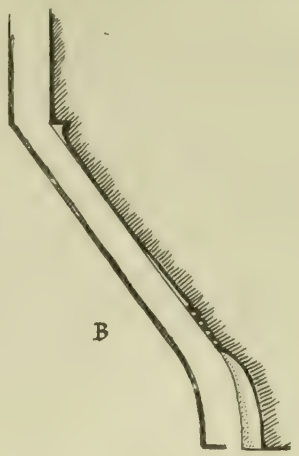

Fig. 4.

mitre joints, while the outer row had one stone lapping over the other with an L-shaped return which brought the vertical joint over the centre of the angle column and also grasped the angle (Fig. 2).

In scores of books students will find elaborate diagrams showing how the characteristic details of the Doric entablature might have been derived from wooden forms. I cannot believe in these theories, with the one exception that the post and panel arrangement of the frieze (triglyph and metope) probably did descend directly from the timber construction of Minoan days. It is, however, perfectly reasonable to make a masonry frieze of alternate bond-stones and slabs. It is also easy to see that the bond-stones might be regarded as little pillars between the slabs or panels, and have vertical channels—"triglyphs"—worked on them, more or less echoing the main columns. No explanation is really called for, except in regard to the curious little blocks with guttæ, which occur on the epistyle beneath the triglyphs. These blocks and guttæ were, I think, more likely to have been suggested by painted decoration than by blocks and pins of wood, according to the usual theory.

Except for a filiet about 3 in. deep and 2½ in. projection along the top of the epistyle, the whole face of the stones, about 4 ft. deep, was worked down to obtain this fillet, together with the short bands (regulæ) beneath the triglyphs and six guttæ or drops to each little band. The fillet and regulæ, with guttæ, must have been much valued, when they were obtained with so great labour. The regulæ and guttæ seem generally to be thought of now as a kind of corbel blocks beneath the triglyphs, but the regulæ are in advance of the triglyphs, and there seems to be no real connection between them. The inner order has the architrave fillet, regulæ, and guttæ, although the frieze is of continuous sculpture without triglyphs. It is true that the suggestion has been made that the sculptured frieze was a change made during the progress of the work, but if any incongruity had been felt in having regulæ and guttæ without triglyphs it would have been a very easy thing to chisel them off. Again, some of the Greek temples of Italy had triglyphs, while there were no regulæ or guttæ on the beam below. As already said, the regulæ and guttæ on the epistyle were, I believe, taken over from painted patterns of bands and drops, such as those which are so frequently to be found on early vase paintings. They would have been adopted and retained in masonry for the purpose of suggesting continuity in the great beam; the two or three extra lines of shadow on Ionic epistyles serve the same

* On this and other structural questions see Mr. Arthur Smith's important analysis of the building accounts of the Parthenon.

purpose. On the Doric frieze the short pieces of bands, with their guttæ, bridge over the heading joints in the beam stones, and seem to connect them; moreover, the sharp shadows of the guttæ would effectively draw away the sight from the fine vertical joints in the marble beam.

We must conclude that regulæ and guttæ were thought to be specially appropriate to the epistyle, and that they were not preparations for a triglyph frieze. Approximations to the regulæ are found in Minoan building.

The Cornice, the chief part of which is a corona or crowning member, finds its prototype in the overhanging eaves of a roof.

At the Parthenon, as every student of old architecture knows, the inter-columniations next the angles are narrower than the others, and thus the triglyphs are brought close up to the corners of the entablature. This fact is so obvious that it is usually given as the only reason for the lessened inter-column spaces. From Penrose's measures, however, it may be seen that the third metope from each corner is not exactly over the centre of the second column by an inch or two. It is not pushed outwards by so much to help equalise the spacing of the columns, but rather drawn inwards away from the angle. The primary intention of the adjustment at the Parthenon was evidently to strengthen the angle and shorten the excessive length of those epistyle blocks which ran on to the corners of the entablature. These blocks had to be nearly 3 ft. longer than if, like the normal ones, they extended only to the centre of the argle columns. Obtaining and handling these big blocks must have been one of the key problems of the structure. They were, indeed, the chief corner-stones of the Temple. The lessened inter-columniation was not an "æsthetic" refinement, it was a practical expedient of building The angle columns are about an inch longer in diameter than the others.

Acroteria.—On the apex of each of the pediments was a large acroterion, and at the lower angles were others. The central acroteria were large compositions of open work of acanthus leaves, branching stems, and palmettes, pierced in great marble slabs. As restored by Dr. Praschneker from many small fragments, they seem to have been 8 or 9 ft. high. He sorted out of the fragments two slightly different patterns for the east and west pediments (*Sculptures of the Parthenon*, 1910). Such great acroteria were traditional, and extravagantly large ones also existed at Ægina, from which Furtwängler put together restorations, which I have seen at Munich. These gable ornaments doubtless had some semi-sacred office, and they were probably descendants of the horns of consecration found in Minoan buildings. The acroteria of the Parthenon were probably gilt, as were those at Olympia. Dr. Praschneker thought that some of the fragments should be referred to those at the bottom angles of the pediments. There are ancient references to gilt urns on the pediment, and these he would put on either side of one of the principal central acroteria. I doubt if any of the fragments necessarily belonged to the lower angles, and unless this is certain it seems more probable that the gilt urns would be placed, like others at Olympia, on the lower angles of the pediment. At the four lower angles of the Parthenon pediments are (or were) level stones, with a sinking in each about 2½ ft. square and 5 in. deep. These seem suitable for square bases under circular objects.

Wilkins, more than a century ago, suggested that the lower acroteria were probably vases. "The temple at Olympia, we are informed by Pausanias, had vases of gilt metal at each termination of the pediment and a Victory on the summit. . . . It does not seem improbable that the acroteria [at the Parthenon] might have been vases. They might have had some allusion to the prize in the games at the Panathenaic festival. It is not improbable that the Parthenon was alluded to in a fragment of Callimachus . . . the vases he speaks of were on the summit of the temple. . . . Vases are represented in ancient paintings upon buildings."

Having in mind the systematic use of gilt metal throughout the Parthenon and the array of bronze shields on the epistyle, I am inclined to accept bronze vases as being the most probable acroteria at the lower angles of the pediments The close resemblances between the Parthenon and the temple at Olympia is evidence in the same direction; so, also, is the fact that the fixing cavities seem to have been *square*.

Dr. Praschneker's restoration of the central acroteria seems too fragile for practical work, but it may not be doubted that they were of the type which he has recovered. The slabs from which they were cut would have been about 7 or 8 in. thick. A part of a main stem at the Museum is about 4 in. in diameter; it is elaborately fluted and wrapped round by an acanthus leaf.

Lions' Heads and Antefixæ.—At the four angles of the building the upper mouldings of the pediments were returned a short distance along the flanks, and in these special places projected boldly carved lions' heads. They may appear to have been non-functional imitations of gutter spouts, and in the *Museum Guide* they are said to be treated in a manner appropriate to "purely decorative" pieces of sculpture. Again, in the last edition, 1925, we are told: "In its original intention the lion's head may be supposed to have been meant to serve as a gargoyle for the pediment; but on the Parthenon it performed no duty." Similar heads were found at the earlier Doric temple at Ægina, so they were traditional and not merely a "decoration" invented for the Parthenon. At the Parthenon the eagerly staring lions' heads turn their gaze a little in the diagonal directions from the four angles of the building, as if watching, and that was their supposed office. It may not be doubted, from the evidence of many other monuments, that their primary purpose was to be apotropaic and to guard against the approach of evil influences. One of the tombs from Xanthus in the Museum has four such lions' heads projecting in an accidental manner from a sculptured subject, with which they have nothing to do. Other Lycian tombs illustrated in Benndorf's work on the Trysa monument have four lions looking out diagonally.

Along the flank of the Parthenon, over the cornice or stone eaves, were set a series of carved stones like antefixæ, but here they had not the function of terminating the covering pieces of the roofing slabs. These pseudo-antefixæ consist of two volutes at the base, with spreading petal-like forms between. Wilkins says that in his day such a composition was "commonly called the Grecian lotus." This is a very good name, and it

Fig. 5.

may not be doubted that such antefixæ were regarded as "lily-work." At the Parthenon they were semi-sacred symbols and apotropaic It was for this same reason that they were commonly carved on gravestones. Indeed, the primary purpose of what we call ornament was to ward off evil and confer ceremonial purity; even great pedimental sculptures, in their origin, had such a purpose. What we call "ornament" brought ancient buildings good luck: now the luck has changed.† These "antefixæ" at the Parthenon (Fig. 5) may be said to be exactly like those found on many grave slabs, as, for instance, on an archaic *stele* in Naples Museum (Fig. 6).

At the Museum is a large part of one of the original "antefixæ," as well as a cast of another, more complete. Both of these are

Fig. 6.

set up with level beds and vertical faces, but surely they were inclined, the beds following the roof slope. The small circles which form the eyes of the volutes were probably gilt. The small forms between the volutes and their bases were plain tongues or spurs, not ornamental leaves, as in restorations (Fig. 5).

In a suggested restoration of the roof tiling by Woods, among his papers at the British Museum, similar flower forms are shown along the ridge. On the other hand, Penrose speaks of plain saddle pieces here.

In this short examination of details of the structure we have seen that all was contrived according to tradition, by direct structural means; there were little adjustments and refinements, but there was nothing that we may call original design. Everything seems to have been conditioned by custom and ritual and by common building methods; the result cannot have been thought of as mysteriously "architectural" or "æsthetic," but only as sacred and sound.

Correction.—The scholarship on which Penrose travelled was the Wort's Endowment, not Week's, as in my last chapter.

A Combined Water-Tower and Tank.

Some twenty new designs for a water-tower have been on view at the rooms of the Institution of Structural Engineers, at 10, Upper Belgrave Street, which have been submitted for the Brenforce Travelling Scholarship, value £300. The first place is taken by J. Blackett, of Newport, Monmouthshire, the second by S. H. Suthers, of Kenton, Middlesex, and the third by E. Williams, London. Of the three, the second design is the most satisfactory from an architectural point of view. It is treated with square projections and masses, and has a considerable batten in the outline. The design shows a cafe and conveniences on the entrance ground floor. The staircase goes up the centre of the tower, giving access to a public balcony at the summit. From the point of view of plan we presume the design placed first found most favour. The stairs go up at one side of the tower and the water-tank occupies the whole upper part, with a balcony round it. A mistake in the exterior treatment is, we think, in the form of the four projecting pieces, which are too heavily treated. The third placed design hardly bears out the promise of the elevation when seen in perspective. There are two amongst the other designs which deserve some special commendation for their architectural treatment, those by E. M. Ellerton and W. R. Benwell.

† Wilkins says that in the Erechtheum inscription *anthemion* (flower) is the name of volute capitals. In any case, the antefix like ornament on gravestones or roofs was a lily-flower.

THE ARCHITECTURAL ASSOCIATION

PRIZE DISTRIBUTION.

Mr. Gilbert H. Jenkins (President) occupied the chair at the annual prize distribution of the Architectural Association Schools on Friday, July 1, when the prizes were distributed by Sir Aston Webb, P.P.R.A.

In opening the proceedings, Mr. Gilbert H. Jenkins said they were there to celebrate the conclusion of another year of the work of the A.A. Schools. This was the eightieth year in which the Architectural Association had interested itself in architectural education, and this year they had been most successful in the number of studentships and awards gained by students of the A.A Schools. It had from that point of view been a most exceptional year. A.A. students had won the R.I.B.A. Tite Prize, the Victory Scholarship (and three honourable mentions), the Owen Jones Studentship, the Pugin Studentship, the Henry Saxon Snell Prize, the Alfred Bossom Travelling Studentship, the Grisell Prize, the Godwin Bursary, and the Royal Institute Bronze Medal. Since then the Prix de Rome had been awarded to a student of the A.A. Schools. The schools had travelled a long way since in 1847 twenty-four students put their heads together in an effort to improve architectural education. Then for some years the Association ran a voluntary system of education, and in 1855 approached the Royal Institute of British Architects with the suggestion that a voluntary examination in architecture be instituted in order to raise the standard of education. As a result, the class at the A.A., which was simply a class in design with lectures once a fortnight, was extended to cover the whole field of architectural education. In the year 1877 the R.I.B.A. decided to make examination compulsory for the Associateship of the Institute and it was from then that the efforts of the A.A. to found a large architectural school dated. In 1881 the first examination was held and there were between 200 and 300 members of the Association. To-day there were over 200 students alone and the school was the largest in England; the A.A. Schools were now so large that they had as many students as the whole of the rest of the architectural schools in the country combined. As a consequence, the premises had shown signs that they were inadequate for the large number of students, and the Council was happy to state that the schools were now in process of enlargement so as to provide ample accommodation for both the students and the members. It was hoped that at the beginning of the New Year they would have some really fine premises, and that their excellent staff and masters would not be hampered in their work. One other thing they were celebrating that day, and that was the Diamond Jubilee of Sir Aston Webb's membership of the Association. Sir Aston Webb was president of the Association more than half a century ago. Sir Aston was there almost against the wishes of his doctor, and they would appreciate how much they owed to him for being present to give away the prizes.

Sir Aston Webb then distributed the prizes to the successful students, and in the course of a few words expressing his pleasure at being present, said the occasion would be one of the happiest recollections of his life. Their president had told them that it was eighty years since the Association was started—it was also almost eighty years since he had started. From almost as soon as he could recollect he had taken the greatest interest in the Association, and had the greatest affection for it. He remembered its very early days, when a few members worked hard for its success, and he rejoiced to see the extraordinary success that it had achieved—a success due entirely to the work of the Association itself and its members and not to the support of any other body. He would also like to say a word for the staff of the schools. At the present time the teaching staff was as good or better than the schools had ever possessed, and that was saying a good deal. He was interested to hear that the premises were to be enlarged. He thanked them very much for the honour they had done him in asking him to distribute the prizes, and could assure them that the memory would abide with him for the remainder of his life.

Mr. W. J. Tapper (President-elect of the Royal Institute of British Architects), in proposing a vote of thanks to Sir Aston Webb, said Sir Aston was a friend of them all at the Architectural Association, and it was a very easy matter to thank him, and also to associate with him the name of Lady Webb, who was also present. He was sure, also, they would all like to congratulate Sir Aston on his latest honour, conferred upon him by the Royal Society. To the students he would say that it was not the prize that really mattered, but the work done in order to win it. Those who had not been fortunate enough to win prizes should not be disheartened, but work all the harder; in due time he was quite sure they would receive their reward in the shape of a prize of a different sort. The A.A. Schools had a really great record, and had produced many architects of renown. Great architects gave freely of their services to the schools in the early days when architectural education was not generally considered to be of any great importance, and when the majority of architects received a very happy-go-lucky education. There was no co-ordination of the schools as was done to-day by the R.I.B.A. and the Board of Architectural Education, and in that connection he would like to say that the organisation of the Board of Architectural Education was in a great measure due to Mr. Maurice Webb, who had given a great deal of thought and time to the matter. On the question of architectural education, he would like to lay stress on the value of the study of old buildings, the measuring and sketching and making mental notes of old cottages and churches and monumental buildings. That kind of work was invaluable not only to young students, but to men of his own age. On every opportunity he went away with his book and pencil and rule, with the greatest advantage to himself. Travelling studentships were invaluable, for the experience to be obtained from travelling was a tremendous help apart from architectural education; it broadened the mind. Nowadays there were plenty of travelling facilities, and they were all the better for it. He thought most of them would agree that there was little definite expression of a twentieth-century architecture in the sense that the period was expressed in all the previous centuries up to the eighteenth century. Any architect could date an old building correctly within a few years, but he doubted very much whether future generations would be able to date the buildings now being erected. He believed that was due to the fact that the schools had not taught broadly on the same lines. They should value tremendously all traditional architecture, and all architectural students should study the buildings of past ages: there was still plenty of room for individuality based on tradition.

Mr. Howard Robertson, in seconding the vote of thanks, expressed the pleasure of the staff and students at the presence of Sir Aston Webb and the president of the Royal Institute of British Architects. The fact that the president-elect of the R.I.B.A. should, he said, come to the A.A. on such an occasion was a matter for great encouragement, as it implied that the Institute kept a fatherly eye on the things the Association was doing. Practically all the support they received came from within the profession, and that was a very good thing for them, because if they did not keep up to standard they would very soon be criticised. In regard to the prize-giving, he would like to mention that the winning of the Rome Prize by Mr. Cummings that year reflected a great deal of honour on the A.A. Schools. In the past they had not been fortunate in their participation in the Rome Competition and for the past few years only a few A.A. students had entered for it. That was very unfortunate, because it was a very valuable prize to any student, young or old. But this prize had not been a popular one amongst the A.A. students, largely because of an idea that it was awarded on a rather archæological basis, whereas at that school they had to a large extent been following the idea of the problem and its solution as opposed to any question of style in architecture. But now all that had been adjusted in such a way that they all felt satisfied that the competition was one that brought out the best work. It was therefore gratifying to know that an A.A. student, with a very modern design, had won the prize that led to a study of classic architecture. It showed a change in architectural thought and in the manner of judging students' competitions. It showed that there was a greater freedom, and that was a great encouragement to the students. A flexible system of judging was certainly the best incentive for competitors. On account of Mr. Cummings' success in the Rome Prize he was *hors concours* for the fifth-year prizes. The three prize-winners in the fifth year were so equal that there was nothing much to choose between them; had not Mr. Cummings put himself out of the running by winning the Prix de Rome he would have been bracketed with the others.

The vote of thanks was carried with acclamation.

Following is a list of the scholarships and prizes, 1927:—

First Year Course.—"Howard Colls" Travelling Studentship (value £15 15s.), A. G. Gibson; 2nd prize, books (value £5 5s.), Miss J. G. Ledeboer; scholarship tenable for one year in the second-year course, Miss C. Dillon; honourable mention, D. R. Stark.

Second Year Course.—A.A. Travelling Studentship (value £26 5s.), M. H. Egan; 2nd prize, books (value £10 10s.), G. R. Linfield; scholarship tenable for one year in third-year course (value £75 12s.), R. D. Scott; honourable mentions, Miss B. J. Read and D. Booth.

Third Year Course.—Holloway Scholarship, tenable for two years (value £300), S. E. T. Cusdin A.A. Travelling Studentship (value £31 10s.), J. C. Rose; 2nd prize, books (value £10 10s.), J. A. Ritchie; "Walter Lawrence" Scholarship, tenable for one year in fourth-year course (value £50 8s.), D. R. Burles; honourable mentions, E. J. Carter, E. Playne, H. H McWilliams, and A. H. Girard.

Fourth Year Course.—R.I.B.A. "Henry Jarvis" Scholarship (value £50), R. W. Lloyd; scholarship tenable for one year in fifth-year course (value £50 8s.), R. F. Jordan; prize for general progress (value £10 10s.), L. P. Williams.

Fifth Year Course.—"Henry Florence" Travelling Studentship (value £50), J. H. Breakwell; A.A. Travelling Studentship (value £50), W. R. Brinton; "Alec Stanhope Forbes" Prize for the best colour work during the year, books (value £5), E. B. Cumine; honourable mentions, R. P. Cummings, J. V. Hamilton and H. M. R. Drury.

The following students have qualified for the diploma, subject to completion of six months' office experience:—F. B. Armstrong, J. H. Breakwell, W. R. Brinton, C. Crickmay, E. B. Cumine, H. M. R. Drury, J. V. Hamilton, H. Kelham, Miss M. Rigg, W. V. Trubshawe and L. Varcoe.

Medal presented annually by the Société des Architectes Diplomés par le Gouvernement, Paris, to the best diploma student of the year: J. H. Breakwell.

THE REGISTRATION BILL IN PARLIAMENT

When the Select Committee of the House of Commons, presided over by Sir Clement Kinloch-Cooke met again on June 28 to consider the Architects' Registration Bill, the first witnesses called were Mr. W. G. Percy, of the Faculty of Architects and Surveyors, and Mr. H. B. Whitfield, general secretary of the Faculty.

The witnesses submitted a précis of evidence, which it is understood was in the following terms:—

The Faculty has from the commencement expressed complete sympathy towards, and support of, the principle of compulsory registration of architects, *subject to adequate representation and safeguards for all architects*, whether members of the Royal Institute of British Architects or of other architectural bodies; and also for the architect who is at present a member of no organised body.

While the Faculty admits and appreciates the invaluable services rendered to the profession by the Royal Institute of British Architects in raising the status of the profession, and that it is therefore quite proper that that Institute, as the oldest and most prominent architectural body in the country, should play the leading part in the promulgation of the system of registration and in the administration of that system, yet at the same time the Faculty feels strongly that due regard should be given to the claims of newer architectural bodies, and every possible safeguard introduced into the Bill to protect the interests of the large number of practitioners who, for various reasons (in many cases purely financial) are outside the privileged confines of the Institute.

It should be borne in mind that, particularly in small provincial towns, the practice of architecture and that of surveying are frequently combined, and it is such practitioners, who could not in any case afford the luxury of membership of two professional bodies (such as the R.I.B.A. and the Surveyors' Institution), that the Faculty of Architects and Surveyors is intended to assist.

It was in consequence of the complete and autocratic control of the profession by the Institute which would have been conferred by the Bill as originally drafted that the Faculty felt compelled to oppose it strongly; and our criticisms were embodied in a printed pamphlet, copies of which were immediately circulated to all members of Parliament. In this connection it only remains to be stated that the R.I.B.A. Registration Committee shortly afterwards asked for copies of this criticism, and that when the final draft Bill was introduced into the House of Commons the objections raised by the Faculty had to a large extent been met by the introduction of suitable safeguards, in the form of the representative Admission Committee, the representative Board of Architectural Education, the Discipline Committee (and the prescribed right of the practitioner to appear before that Committee in his own defence *before* expulsion from the Register), together with the proviso that all regulations issued by the Council should have the prior sanction of the Privy Council. The Faculty wishes to urge strongly the adoption of certain further amendments which have now been put forward to the Select Committee by the Institute at the Faculty's instance. These amendments are embodied in the list now before the Committee.

The adoption of these amendments would meet all the expressed objections of the Faculty to the Bill, but at the same time it is suggested that the following points are worthy of the Committee's consideration:—

Clause 7 (2).

The Discipline Committee to include a representative of the Faculty of Architects and Surveyors, or alternatively that in cases where a member of the Faculty is appearing before that Committee a representative of the Executive Council of the Faculty should be temporarily co-opted.

Clause 5 (2).

While the Faculty appreciates the right of the Institute to a larger representation on this Committee than any other individual professional body, it feels that its proportion of members should not be so high as 50 per cent. of the entire personnel. It is suggested that an independent chairman should be included, and that the number of R.I.B.A. representatives should be reduced by, say, three members, and that these should be substituted by a "leaven" of three entirely independent individuals.

The Faculty shares with the Royal Institute of British Architects the feeling that by the amendment of the word "architect" to "registered architect" the object of the Bill will to a large extent be nullified, and it would urge strongly that the measure be made compulsory. With regard to the question of registration fees, it is hoped that the Committee will ensure that such fees (if any) are kept at a minimum, in order that the small practitioner may be in the same position to take advantage of the register as the man with an extensive practice.

With regard to the amendments proposed by the Incorporated Association of Architects and Surveyors, the Faculty has the following comments to make:—

Clause 2, *page* 1, *and suggested schedule.*

The Faculty, in view of the safeguards already introduced or proposed to be introduced into the Bill to protect the interests of architects belonging to Societies other than the Royal Institute of British Architects, sees no objection to the actual administration of the register (subject to such safeguards) by that Institute, as being the oldest and numerically strongest architectural organisation, but should the Committee adopt the principle of a representative Council, the Faculty would press for representation on such a Council.

Clause 5, *page* 2, *lines* 40 and 41.

The Faculty considers such amendment unnecessary, as practising members of the R.I.B.A. and of the Incorporated Association are presumably *bona-fide* architects and would be covered by the clause as it stands. If, however, the Committee agree to the acceptance on the register of all members of the Institute and architect members of the Incorporated Association *en bloc*, the Faculty would strongly urge that architect members of the Faculty be similarly treated.

Clause 5, *page* 3, *line* 16.

The Faculty suggests that this amendment is unnecessary, provision being already made in the Bill for the recognition of examinations of outside bodies as a qualification for admission to the register where such examinations are approved by the Board of Architectural Education.

The Chairman asked witness whether he would like to outline any of the Faculty's objections to the Bill, because he (the Chairman) thought that on the whole witness was in favour of the Bill subject to certain amendments.

The witness said his Faculty were in favour of the principles of the Bill—that was to say, the registration of architects.

Col. Moore: As the Bill stands, you entirely support it?

Mr. Whitfield: Yes.

Mr. A. E. Sockett, Senior Reader of the Faculty, who was also present, said there was one reservation they desired to make with regard to education.

Sir A. Hopkinson: May we take it that your principal amendments are now embodied in the Bill?

Mr. Whitfield: That is so.

Mr. Gardner: How many members have you?

Mr. Sockett: 5,050. Approximately 300 are architects.

In reply to another question, witness said they were not formed as an Association only to put up a fight against the Bill.

The Chairman: What were you formed for?

The witness: As a professional centre.

Did you not say just now that you were formed to fight the Bill?

The witness: One of the objects of any professional centre is to make sure there is no legislation detrimental to its members so far as they can avoid such legislation. It is therefore their duty to look into such registration Bills as the present.

The witness then went on to refer to details of the Faculty's scheme of education.

Sir Murdoch Macdonald said, arising out of one of witness's remarks, that he would like to know the definition of an architect.

The witness referred him to a book entitled "Theory and Elements of Architecture," and quoted the following definition: "A builder who desires the universal in his work."

Mr. Lindley: The definition is very indefinite.

Evidence was then given by Sir Charles Allom, on behalf of himself and others similarly situated. He submitted a précis of evidence, which it is understood was in the following terms:—

Sir Charles Allom carries on business as senior partner in the firm of White, Allom and Co., decorative designers and architects. By reason of his being a member of a contracting firm as well as being an architect, he is debarred from becoming an Associate or Fellow of the Royal Institute of British Architects, in spite of having practised architecture continuously for a great number of years. There are other decorative designers in the same position as Sir Charles Allom, who, like him, are seriously affected by the Bill, even if amended as at present proposed.

The public will attach importance to the term "registered architect," and Sir Charles and those associated with him desire to come within the provisions of the Bill and to become registered architects. His submission is that there are a number of decorative experts at least equal to the very best architects in the kingdom, and it is unfair to them to refuse an amendment to Clause 5 (c) of the Bill making it clear that persons who have practised as an architect in conjunction with the carrying on of another profession or business should have the right to be registered under the Bill.

The Chairman: Your main objection is that you are not included in Section "B"?

The witness: the word "*bona-fide*" is the question. The addition I wish to make is to qualify the expression. The R.I.B.A. naturally objects to my carrying out work on my own, and it would be very unfair if I were in any way barred by them from practising.

Mr. W. Ernest Lord, of the firm of W. Turner, Lord and Co., 20, Mount Street, W.1, was the next witness. He said he appeared in support of the amendment proposed to Clause 5 (1) (c)—viz., the addition at the end of that clause of the words "either exclusively or in connection with, or as part of his ordinary business."

Witness submitted a précis of evidence which it is understood asserted that the promoters of the Bill were seeking power to undermine the position which was held by witness's firm and others. He therefore contended that in doing so they were acting *ultra vires* to the accepted practice and cus-

tom of the country, and were seeking to prejudice men who by their conduct and work ought not to be placed in any inferior position to members of the Institute. If Clause 5 was amended as suggested, the objections raised would be considerably modified.

At the conclusion of this evidence the Committee rose.

The Select Committee sat again next day, when the first witness was Mr. Alfred Herbert Dykes, Hon. Secretary of the Association of Consulting Engineers.

The witness submitted a précis of evidence which was in the following terms:—

The Association of Consulting Engineers was Incorporated in 1913 to associate together for the purpose of co-operation and mutual advantage and consultation Consulting Engineers as defined in the Articles of Association, and to give the legislature, public bodies and others facilities for conferring with and ascertaining the collective views of consulting engineers.

Whilst some members are engaged principally on a comparatively small number of very large and important schemes of docks, harbours, drainage or electric power supply, the practice of other members comprises a very much larger number of smaller works in connection with the engineering equipment of large public buildings, factories, etc. It is inevitable that a civil engineer whose practice involves the carrying out of such structural work as that usually implied by the term "Civil Engineering" is, and must be, frequently called upon to carry out minor works which are undoubtedly of an architectural nature or are on the border line. It is found, for instance, that members of the Association engaged on water and sewage schemes frequently have to design buildings in connection with these works, such as valve towers, machinery houses, pumping stations, caretakers' cottages and similar works. Other members, again, who specialise in steel constructional work and reinforced concrete are perfectly competent to supply details of a structural engineering nature in connection with any building. Again, it frequently happens that consulting engineers engaged upon the design of electricity power stations are asked to undertake the complete work, including the building surrounding the machinery of the power station.

In other cases where the architectural appearance is not so important, it frequently happens that the consulting engineer takes full responsibility for the undertaking, and carries out the design of the buildings in his own offices. It is evident, therefore, that any consulting engineer who has hitherto been accustomed to carry out buildings and architectural work (usually of a simple description) as part of, or in connection with, other schemes of a civil engineering nature, will, if clause 12 of the proposed Architects' (Registration) Bill is passed in its present form, be in a position analogous to that of an unqualified or unregistered medical practitioner.

The majority of practising Civil Consulting Engineers (using the term in its narrower sense) would object to add to their statement of qualifications the words "registered architect," even if eligible for admission to the Register. A somewhat similar situation occurs among architects, some of whom have been adequately trained and are quite competent and experienced in the design of steel structural work. With such experience and training they are perfectly competent themselves to design the details of a structural engineering nature in connection with an architectural building. Some architects, in fact, do this work; others employ engineering specialists to do the work for them, and some get the work done by manufacturing or contracting firms. In the former case no one could reasonably suggest that a competent architect is exceeding his rightful duties or that it is necessary for him to obtain and use professionally a specific engineering qualification before he can apply his knowledge and talents to problems of structural engineering. The crucial test in the interest of the public should be: "Is the man competent to carry out the work which he undertakes?" My Association have no objection whatever to the Registration of Architects as such, but they do object to any attempt to prevent qualified consulting engineers carrying out civil engineering work because it may be deemed to be of an architectural character. Although the work of architects and consulting engineers overlaps in many directions, their functions are essentially different, the one being more particularly engaged in applying the principles of art to beautifying human dwellings and structures whilst the function of the engineer is more particularly to apply the principles of science in order to add to the power and productivity of man and to his material comfort and well being.

There is thus an unlimited field of work for both, and what is required is greater co-operation between these professions and more readiness on both sides to call in professional help in all cases where the original expert, whether architect or engineer, is not fully competent himself to deal with all portions of the work making up the undertaking under consideration.

Examined by members of the Committee, the witness said that the particular clause to which his Association objected was Clause 12.

The Chairman then showed the witness the amended Bill, and asked him whether the amendments made to the clause covered the points of objection.

The witness replied that the objections were met to a considerable extent. The objection to the Bill in its original form was that a large number of their members in the course of practice as consulting engineers had to do structural work on buildings in connection with docks, electrical power stations, and so on, and although it was the general custom if any special architectural features were required, to associate an architect with the work, there were occasions when the engineers carried out the work themselves.

Sir A. Hopkinson: You wish to charge in the ordinary way for work done which is in the nature of architectural work? Subject to that, do you see no objection to the Bill as amended?—I would like to glance through it first.

The Chairman: Any other alterations would be in your favour. They are consequential.

Mr. Hirst: Will the Bill prejudice relations between yourselves and the Royal Institute or improve them?—I do not think it makes much difference. The Bill nowhere defines what is architectural work or what are the duties of an architect. Architects often include in their bills of expenditure of work on a building a great proportion of what may be engineering work. We object to that. Large sums are often included for electric lighting, power motors, ventilating and heating, although some of the leading architects associate an engineer with them in that work.

Is it your view that the Bill would be improved by a specific definition of what is an architect?—I think it would help considerably.

I understood that your real objection was confined to Clause 12, and that when you saw the amended Bill you were quite happy about it.—That altered it a good deal.

Is it your wish that a definition of architect should be included?—It is our wish, but we recognise it is exceedingly difficult to do so. What one really wants to get is something that means that if a man is a registered architect he is only registered to carry out work for which he is fully qualified, and not to carry out work for which he is not fully qualified.

Sir. A. Hopkinson: Would it not be an advantage to any profession to have the people in it more carefully trained?—I think so.

You find that the entrance to your own profession is bettered through having a carefully organised institution?—Yes.

Professor Arthur Beresford Pite, F.R.I.B.A., was the next witness. In a precis of evidence, the witness said the qualifying examinations for registration under the Bill were not specified, but it could be assumed that they would follow the precedents established by the existing examinations for admission to the R.I.B.A. These examinations and the educational course that had come into existence dealing with the syllabus were replacing the old apprenticeship system, which had fallen into disfavour in recent years. The examinations were designed to establish a level of professional status in education and assumed a public school education of about Fifth Form standard as a preliminary qualification. Thus the elementary education standard had to be supplemented by advanced education, a foreign language being required, etc. This was a bar to easy entrance to architectural education proper. His experience for many years, on the one hand, in the cases of talented art students at the Royal College of Art and, on the other, among students of the L.C.C. School of Building, indicated that if architecture was regarded as a gentleman's profession demanding general education rather than a practical occupation dealing with the building crafts, the lower rungs of the ladder were missing. Educationally, the art of architecture was the art of building. Building was concerned primarily with handicrafts. A much-needed reform would be the opening of courses of architectural education for builders—i.e., to building students. The high fees charged in the schools recognised by the R.I.B.A. were a difficulty in the way of reform. All the vital styles of architecture originated in the building crafts and their traditions. Architecture as a learned profession only dated from the Renaissance of classical studies, and from that time onward the building crafts lost their artistic vitality. The recognition by legislation of a registered qualification for architects should be conditioned by the requirement that the examination should deal only with the essentials of architectural education. These might be described as (1) sound construction, (2) practical acquaintance with the arts and crafts of building. In his judgment it would be unsafe to admit questions of taste or design into a legalised examination. The judgment or bias of the one or two examiners who in practice would have to decide such matters and the necessarily rapid examination test could not provide a fair criterion of a candidate's architectural power.

In reply to a question, the witness said he wanted to urge the importance of a greater practical acquaintance with the arts and crafts. He added that the well-trained builder had the fundamental qualification for an architect. It would be a hardship if one could only be registered as an architect after passing the test of personal opinions in matters of taste. He was a little afraid of Parliament interfering with artistic taste.

The Chairman: It would be rather a mistake, in your view, to recommend any interference with taste in architecture and that we must decide it on the question of architecture alone, apart from taste?—Yes.

Sir A. Hopkinson: Some of us read your letter in "The Times" with interest. You have read the amended Bill and seen the alterations to Clauses 11 and 12?—I was here when Major Barnes made these suggestions on behalf of the promoters.

Mr. Tasker: Do I understand you to say that the present method of examinations is not ideal?—Yes.

But I think you will agree that that was always the case. You are more concerned with the practical side, and you suggest that it has been more divorced from the artistic side in recent years?—I would say divorced from the educational side rather than from the artistic side.

I gather that in your experience the tendency is to shut out the poor man, although he might be a genius?—That is because the education is in the hands of a

professional body which has professional ideals.

You desire to give encouragement to genius irrespective of surroundings or birth?—Yes.

In reply to another question, witness said there was no difficulty in students working in an office in the daytime and attending classes at night.

Col. Moore: To your knowledge are there any boys who were in poor circumstances now members of the Royal Institute?—Yes; one was elected at the last election.

Mr. Gardner: I gather your idea is that architectural pupils should go to evening classes for theory. Do you approve of such extended hours for students?

The Witness: What age?

Say about 16 or 17. Do you say they ought to spend the day in an office and the evening at a school?—Yes, I do.

Mr. Lindley: Do you think it desirable to detail the subjects of the qualifying examinations?—I do not; but the nature of these examinations bears upon the fact that Parliament is asked to make the examinations the test of registration.

Replying to another question by Mr. Lindley, the witness said he should be sorry to distinguish between the theoretical and the practical. A combination of both was necessary. Unless a man had the educational status to begin with he could not get into the Royal Institute

Proceeding, the witness said he did not think the Bill would be advantageous either to the community or to the profession. It would not be advantageous to the community because it applied only to a group, that was to say, the architects, and the community was not able to test their special qualities as architects. It was likely to be inimical to architects if it made architecture a theoretical rather than a practical handicraft.

Asked for his views of the way of overcoming the difficulty of the fees charged for the training of architects, the witness said the way was to take the power out of the hands of the Institute and give it to the Board of Education. If it was desired that architectural education should be as free as possible it should be placed on the same basis as a technical rate-aided school. In his view the class of training would not suffer.

The Chairman: Major Barnes did not quite agree with your views.

The Witness: And I did not quite agree with Major Barnes's views.

Col. Moore: If the Royal Institute were to recognise the Council schools that would meet the point?

The Witness: Then the difficulty would be met.

The Committee adjourned.

PROGRESS OF GREATER LONDON HOUSING

The figures in the following table, presented at the meeting on June 28 of the L.C.C., show the numbers of houses and flats provided in Greater London in each of the seven years, subsequent to 1919 by (1) local authorities, (2) housing trusts and public utility societies, and (3) private enterprise:—

Year.	Houses and flats provided by.						
	Local authorities.						
	London County Council.	City Corp. and metropolitan borough councils.	Outer London local authorities.	Total.	Housing trusts and public utility societies.	Private enterprise (houses of *all classes*).	Total number of houses and flats.
1920... ...	268	169	712	1,149	59	1,434	2,642
1921... ...	851	2,059	6,799	9,709	312	2,906	12,927
1922... ...	5,497	2,096	4,465	12,058	530	4,319	16,907
1923... ...	1,132	525	825	2,482	208	7,578	10,268
1924... ...	1,443	360	444	2,247	173	15,021	17,441
1925... ...	2,016	805	1,065	3,886	251	19,404	23,541
1926... ...	4,669	898	2,735	8,302	466	24,729	33,497
Total ...	15,876	6,912	17,045	39,833	1,999	75,391	117,223

The total number (33,497) of houses of all classes provided in 1926 is much higher, says the Report, than in any of the preceding years; for local authorities alone (8,302) the figure is higher than in any year except 1921 and 1922. Of the 8,302 houses provided by local authorities in Greater London in 1926, more than one-half (4,669) were provided by the Council to meet the needs of the County of London only. As regards the outer London local authorities (85 in number), it will be seen that altogether, over the whole period, they have provided little more than the number of houses provided by the Council; whilst in the last three years they have provided only 4,244 houses, as compared with 8,128 by the Council, that is, little more than one-half. In 1921 and 1922 the outer London authorities made great efforts by schemes under the Housing, Town Planning, etc., Act, 1919, to meet the requirements; in later years under the Housing, etc., Act, 1923, and the Housing (Financial Provisions) Act, 1924, there has been a diminution in the extent of their housing operations. Moreover, in regard to houses sanctioned and remaining to be built, the aggregate of the outer London local authorities is only about one-half of the number sanctioned for erection by the Council.

TILBURY'S TOWN-PLANNING SCHEME

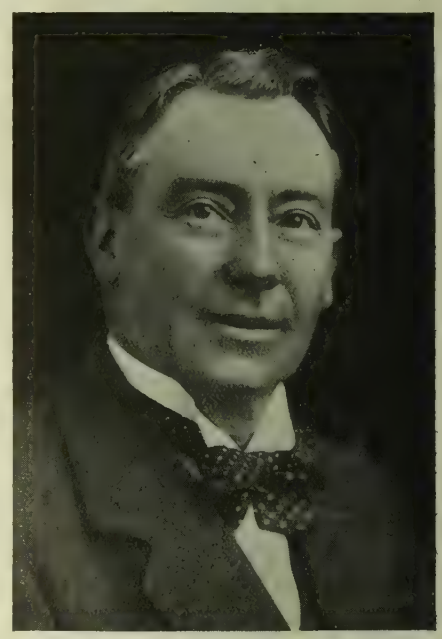
On June 22 Sir Kingsley Wood visited Tilbury and paid a visit of inspection to the town's civic development scheme. He, together with the local member, Mr. H. W. Looker, M.P., and Captain Watson, were shown around by Mr. S. A. Hill-Willis, M.Inst.C.E.I., M.T.P.I., the engineer in charge of the scheme.

Town-planning developments have been undertaken on an extensive scale by the Urban District Council of Tilbury, where thought for the future is the keynote of these schemes. With a population of 17,000, Tilbury has an area of 1,855 acres. Situated in an advantageous Thames-side position, the town is now an extremely important division of the Port of London, both for passengers and cargo, but this degree of importance must be eclipsed in the future, for present developments indicate that Tilbury will, in the near future, become one of the most active shipping centres on the Thames.

To provide adequate road communication between London and Tilbury, an ambitious scheme of highway improvement has been planned and is now in an advanced stage of progress. This undertaking is the London-Tilbury road scheme, which includes the Barking by-pass, bridge and viaduct.

An instance of the up-to-date methods adopted for municipal undertakings in Tilbury is afforded by the fact that there are several miles of concrete roads in the town, while many houses have been provided under the old Housing Acts, in addition to the one and a half million sterling town-planning scheme upon which the Council are now embarked. The town has an improved system of lighting, and much has been accomplished to prevent flooding, while there is a large-capacity tidal outfall works.

The cost of the Tilbury Urban Council's town-planning scheme is £1,509,185, and the entire project was prepared by Mr. S. A. Hill-Willis, the engineer to the Council, in conjunction with Mr. S. A. W. Buckner, the clerk of the Council. In connection with the design of the cinema and new hotel on Civic-square, Major H. Oliver, L.R.I.B.A., Verulam Buildings, Gray's Inn-square, W.C.1, was associated, but Messrs. Adshead and Ramsey, FF.R.I.B.A., designed the Georgian elevations to the Civic-square. In 1917 an experimental section was undertaken, and the reinforced concrete foundations for roads, and the sewers, of a special design by Mr. Hill-Willis, on the scheme proper were commenced in May, 1920. The number of houses provided for in the scheme is 1,670.



SOCIETIES AND INSTITUTIONS

R.I.B.A. STATUTORY EXAMINATIONS.

The R.I.B.A. Statutory Examinations for the office of District Surveyor under the London Building Acts, or Building Surveyor under Local Authorities, will be held at the R.I.B.A., London, on October 19, 20, and 21, 1927. Applications for admission to the Examinations, accompanied by a fee of £3 3s., must be received at the R.I.B.A. not later than Monday, October 3, 1927. Full particulars of the Examinations and application forms can be obtained from the Secretary, R.I.B.A.

SOUTH WALES INSTITUTE

Mr. Charles S. Thomas, F.R.I.B.A. (of the firm of Messrs. C. S. Thomas and Herbert Jones, Swansea), has been elected

Mr. Charles Samuel Thomas.

President—The South Wales Institute of Architects.

the new President of this Institute. Mr. Thomas was educated at the Grammar School, Swansea, and articled to Messrs. J. P. Jones and Rowlands, of Swansea and Cardiff. After completing his articles he joined the late Mr. W. W. Williams, of Swansea, as chief assistant, continuing with him until his death in 1902. He began to practise in 1902, and was appointed architect to several school boards in the Swansea district. He also carried out a number of chapels in the Swansea Valley. In 1908 he was joined by Mr. J. Herbert Jones, F.R.I.B.A., with whom he is still associated in practice. Mr. Thomas was for several years a member of the Swansea Rural District Council and Swansea Board of Guardians, and is a past-chairman of the Western branch of the South Wales Institute of Architects.

THE WEEK IN PARLIAMENT

Westminster, *Wednesday.*

Housing Progress.

On a vote for the salaries and expenses of the Ministry of Health, Mr. Chamberlain referred to housing progress, and said that in the five years preceding the war the average number of houses built in this country was about 61,000. In 1925 it was 137,000; in 1926 it rose to 173,000; and in 1927 to 217,000. That was really an astonishing and prodigious effort, which could not be paralleled in any other country in the world, and it showed that the conditions which had been provided by the Government had acted as the most efficient stimulus to the building industry which could be conceived. The number of houses thus added to the common pool was so great that, as it proceeded, it would be felt through every class of the population, and he felt confident that they were approaching the time when much more active progress would be made in the improvement of slum conditions.

But there was another aspect of the housing question which was not so satisfactory. He was very much concerned about the cost of the new houses, which appeared to him to be far too high. The problem was to see how the cost was going to be reduced. There were two ways of doing that. One concerned the size of the houses. There was very little doubt that the rents which had to be charged to the bulk of the new houses now being built were inflicting a very great strain on the resources of those who were paying them, while they made it absolutely impossible for many others to obtain the accommodation which they desired in a new house, because it was altogether beyond their means. He, personally, was not in favour of lowering the standard of housing, but it was no use blinking at facts, and while it was very easy to be eloquent about the difference between the houses occupied by the rich or the poor, as a matter of fact it was possible to divide the population by a sharp line into two categories of that kind. There was every possible gradation between the rich and the poor, and each category must adapt its methods of life to its means.

He would be glad to be able to record that public appreciation of the value of town-planning seemed to be generally increasing. Local authorities and the public generally were realising that careful provision in the method of development of any given area was a real and practical economy. At present some 2,700,000 acres were covered by town-planning and regional-planning schemes of various kinds. The development of regional planning was of the greatest importance, and he was glad to think it was working so rapidly and smoothly.

There had been a good deal of anxiety about the future of London squares, not unnaturally in view of what had happened in a number of cases. Some time ago the London County Council passed a resolution asking the Government to make an inquiry into the best means of preserving the squares. The Government accepted the view of the L.C.C. and proposed to set up a Royal Commission. He hoped before long to be able to announce the names of the Commissioners and the terms of reference.

Later in the debate, Sir K. Wood, Parliamentary Secretary to the Ministry of Health, said that in addition to the 217,000 houses erected during the last twelve months, arrangements had been definitely made for 160,000 new houses which were either under construction or definitely arranged for, on June 1. Therefore, there was no need for any anxiety that the number of houses for the approaching year would be less than the number for the last twelve months. His experience had been that the higher the subsidy the higher the cost of the house. To-day they were starting on a policy of a gradual reduction of the subsidy, and that was undoubtedly one of the means by which they would get cheaper houses. Subsidies were just as vicious in connection with housing as with any other industry.

The Director of Works.

Captain Crookshank asked the Under-Secretary of State for the Home Department, as representing the First Commissioner of Works, whether he proposed to reduce the staff of his department, in view of the fact that it was thought possible for one of his senior officials to accept an outside contract while employed on full-time work in his department.

Captain Hacking said that it had been decided to abolish the post of Director of Works on the retirement of Sir F. Baines from the Service on or about September 1 next.

Town-Planning Schemes.

Sir John Power asked the Minister of Health what steps were being taken to ensure suitable town-planning, including the provision of adequate sanitation, in rural areas adjoining large towns in which extensive building was taking place.

Mr. Chamberlain said that town-planning schemes were in course of preparation for the whole or parts of 127 rural districts, either by the rural district councils themselves or by neighbouring authorities, and he was encouraging other local authorities to take similar action, where needed, by promoting joint town-planning committees of neighbouring authorities to consider the town-planning needs of their areas. Provision for sanitation was usually made under the general law, apart from town-planning schemes.

Progress in North Wales.

Mr. Chamberlain informed Sir R. Thomas that the number of houses completed with State assistance in North Wales during the period January 1, 1926, to March 31, 1927, was 1,546. Statistics of the number of houses completed without State assistance were obtained half-yearly, and the number completed in North Wales during the period of 13 months ended March 31, 1927, was 1,634.

The Kent Coalfield.

Sir R. Thomas asked the Minister of Health what information he had regarding the present stage of development of the Kent coalfield; to what extent it would be possible to avoid the nuisance of industrial smoke in this area; and whether there were in force such stipulations regarding town-planning as would prevent the creation of housing conditions similar to those prevailing in the older coalfields.

Mr. Chamberlain said that his information was that three mines were working and one being sunk. He understood that electricity was likely to be extensively used in the working of the mines, and that the risk of smoke nuisance would thus be much reduced. Provision was being made to ensure that the housing and other development was in accordance with town-planning conditions.

Imported Doors.

Sir P. Cunliffe-Lister, President of the Board of Trade, informed Mr. W. Hurst that the following statement showed the declared value of the total imports into the United Kingdom of builders' woodwork (window-frames, doors, etc.) consigned from the United States, Sweden and the Netherlands, respectively, in each of the years specified :—

Years.	Consigned from U.S.	Sweden.	Netherlands.
	£	£	£
1913 ...	39,898	71,435	3,231
1919 ...	14,000	121,970	51,274
1920 ...	26,921	215,277	1,297
1921 ...	162,943	182,193	1,815
1922 ...	48,771	141,464	8,194
1923 ...	123,239	188,895	12,085
1924 ...	234,130	309,176	34,700
1925 ...	558,641	335,601	55,739
1926 ...	880,554	343,834	79,136

The official description in 1913 and 1919 of the imports shown above was "House Frames, Fittings and Joiners' Work." Prior to April 1st, 1923, imports into the Irish Free State were included in the figures.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting!—Ed.

Artificial Stone.

[Reply to "Freshman," June 24.]

Sir,—Artificial stone sub-contracts are generally included as P.C. sums in bills of quantities, the quantities for which are more often than not taken off by the tendering firms from the drawings. Their method in works of a general character is to cube up the amount of cast stone and price it at a flat rate per foot cube, arrived at by experience, as covering all labours involved. To take off exact quantities would involve measuring and describing each type of mould required as a joinery item, the cubes of concrete required, and the superficial area of facing.

Surveyor.

Work in Oak.

[Reply to "Oak," June 24.]

Sir,—In treating furniture that has been attacked by worm, I have found that a good soaking in paraffin actually drives the worm out of the worm holes and renders the wood immune from further attack. For fixed joinery, I have no doubt that a thorough spraying with paraffin would have the same effect. Personally I should have suspected the foreign oak rather than the English oak, since the spreading of the pest from the outside to the inside work is not likely to have been a rapid process. Drastic.

Plague of Ants.

[Reply to "Hereward," June 24.]

Sir,—I have had a very similar trouble, and have tried every remedy that has been suggested, or that has suggested itself to me, but without success. All that I have been able to do is to drive the armies away on to a new front, but never to exterminate them. I came across a very good precaution against them the other day in a newly-erected house. The unpleasant part of the ant plague is the way they commit suicide in the food, and if the larder can be protected against them, a very great step forward has been made. In the case I am quoting, the floor of the larder was surrounded by a half-round white glazed channel, through which running water was maintained. This actually had the effect of keeping the food shelves quite free of the pest. Palliative.

Road Charges.

[Reply to "Roads," July 1.]

Sir,—I am very much obliged for your correspondent's explanation of my difficulty. I am, however, still ignorant of whether there is any appeal against an apportionment of road charges as assessed by the surveyor. I note that the liability is according to road frontage, both front and side if it so occurs, and in such proportion as is settled by the surveyor. It is clear that in most cases it would be unduly onerous upon the owner of the corner site if he were called upon to pay full rate for both frontages. Is it a fact that there is no redress if the surveyor so assesses it? Householder.

Ultra-Violet Rays.

[Reply to "Corona," July 1.]

Sir,—Ordinary glass absorbs the ultra-violet rays of sunlight, so that these rays would become absorbed by the glass of an ordinary mirror on the light passing through the glass to the reflecting surface on the back of same. Lux.

Lime for Plastering.

[Reply to "Puzzled," July 1.]

Sir,—If the facts are as stated by your correspondent, the only possible solution of the mystery is that the lime used is not pure, but has some sand in it.

What Else?

THE BUILDING TRADE

THE LAW OF FIXTURES.—XI

By W. T. CRESWELL, Barrister-at-Law; L.R.I.B.A.; Associate (late Fellow) of the Surveyors' Institution; &c.

Rating of Fixtures.

Personal Chattels.

For some ten centuries past or longer it has been the duty of each parish to provide for its own poor. The present law for providing the necessary funds is founded on the Poor Relief Act of 1601. It is the law of rating, lands and buildings being "assessed" according to their annual value, at a rate of so much in the pound, levied generally on individual occupiers, so that the sum of the amounts so levied shall cover the estimated cost of such relief, etc. In determining this value there must be taken into account with each property all articles annexed to it, although they be mere personal chattels, as enhancing the value of the land, etc., for rating purposes.

In R. v. Darlington (1795), 6 Term Rep. 468, it was held, that stock-in-trade, if it be the property of the person in possession and production, is rateable to the poor. Also in R. v. Ambleside (1812), 16 East 380, stock-in-trade was held rateable to the poor, notwithstanding it had not previously been rated in the parish. Again, in R. v. Lumsdaine (1839), 2 P. and D. 219, it was held that stock-in-trade yielding profit was rateable for relief of the poor under the Act of 1601 (supra).

In a very early case, it was held that an advanced rate might be levied on a house because it had standing in it, although in no way annexed, a billiard table. This ruling would not hold good now, however, unless the billiard table was *fixed* to the house. For generally all movable furniture is excluded for rating purposes, excepting any item intended to be used permanently, and essential for the purposes for which the premises are adapted, as, for instance, the billiard table if it be placed in a billiard hall and is not exclusively for the use of the occupier and his friends. In this instance, whether the article is a fixture or not, it is rateable.

Though totally unoccupied premises are not rateable, the presence of any movable furniture will always be taken as showing an *intention* to occupy the premises, and will bring it within rateability.

In Southend v. White (1901), 67 J.P.7, where a lock-up shop on the pier had been used during the summer season, but, before the winter season set in, all stock had been removed, only certain shelves and mirrors being left in the shop, which was then locked up and otherwise unoccupied, it was held, that the shop continued to be liable for rating during the period it was thus left locked up.

It must be remembered that to constitute what is known as "rateable occupation," there must be "use and enjoyment," which is, or is capable of being, beneficial and of value, though not necessarily yielding any profit to the occupier. An occupier need not necessarily have any estate in the land occupied, and yet be rateable. On the other hand, mere possession is not rateable occupation, so long as the premises are left empty. Again, there may be occupation without any right, as, for instance, occupation of land and premises without the consent, or against the will of, the owner, or if the owner is a person not known, and no rent is paid by the occupier. All occupiers are rateable, because they have the benefits of occupation.

No existing Statute gives a legal definition of "beneficial occupation," though it has to some extent been defined in the rulings given in certain cases in the Courts, e.g., in R. v. St. Pancras (1877), 2 Q.B.D. at page 588, as follows:—"Occupation includes possession as its primary element. . . . Legal possession does not by itself constitute an occupation. The owner of a vacant house is in possession, and may maintain trespass against anyone who invades it; but so long as he leaves it vacant he is not rateable for it as an occupier. If, however, he furnishes it, and keeps it ready for habitation, whenever he pleases to go to it, he is an occupier, though he may not reside in it one day in a year. On the other hand, a person who, without having any title, takes actual possession of a house or piece of land, whether by leave of the owner or against his will, is the occupier of it"—and is therefore rateable.

Machinery.

Generally, the equipment of any hereditament with machinery and plant (even though some of it is unattached to the freehold, and would not pass with a demise of the hereditament) must be taken into account as enhancing the value of the hereditament for rating purposes. It matters not whether the value of the machinery is obtained by taking a percentage of the capital value of the hereditament for it, or by making an estimate of its rental value. Cranes, steam-engines, shears, and other heavy machinery attached to the freehold and essential to the business carried on within, even though they be capable of being detached as easily and with as little injury to the freehold as are other tenants' trade fixtures (the latter being usually valued for purchase by incoming from outgoing tenants) are to be included in the value of the freehold for rating purposes. (See Allan v. Liverpool Overseers, 1874, 30 L.T. 93, and R. v. Southampton Docks Co., 1851, 14 Q.B. 587.) So a steelyard, a cotton carding machine, steam engines, machinery in lace-works, ironworks and shipbuilding yards, and machinery used for dock purposes, and in connection with railway premises, lead chambers for the manufacture of sulphuric acid, retorts, gasholders, floating pontoons, blast-furnaces, have all, at various times, been held to be rateable, whether movable or not, as counting to enhance the value of the premises in which they were placed.

In Tyne Boiler Works v. Overseers of Longbenton (1886), 18 Q.B.D. 81, it was held that in estimating the rateable value of premises used as a manufactory, machinery and plant placed therein, as a means of making the premises fit for the purposes of the work to be carried on in the manufactory, were to be taken into account as enhancing the value of the hereditament, although such machinery and plant remained personal property, and were not *physically* attached to the premises.

In Kirby v. Hunslet Assessment Committee (1906), A.C. 43, a principle was laid down the application of which has, however, not been determined. Here *tenant's* machinery was placed in a factory and used therein for the business of the factory; none of the machinery was attached to the freehold. It was held that, whether affixed to the freehold or not, it may be taken into consideration so as to increase the amount in assessing the factory to the poor rate.

Mode of Assessment of Fixtures, Machinery, etc.

Theoretically, it is not correct to assess fixtures, machinery, etc., as rateable distinct from the premises in which they are placed. The premises should be assessed according to the combined value. (See R. v. Guest, 1838, 7 Ald. and E. 951.) In practice, however, it is usual to find out the value of these articles and add it to the value of the premises, first making an inventory of such fixtures, machinery, etc., and then calculating rental value the owner would be willing to charge the hypothetical tenant for the use of them. The rent would be based upon such a rate of interest, as will provide an annual sinking fund (i.e., an annual sum which must be invested for the purpose of redeeming the capital value) required to replace worn-out articles, machinery, etc., as may be desired by the owner.

In Smith (S.) and Sons (Motor Accessories), Ltd. v. Willesden Union Assessment Committee (1919), 89 L.J. K.B. 137, it was held, that the rateable value of premises used as a factory, equipped with machinery for use in connection with the hereditament, should be measured by the rent which a hypothetical tenant would be willing to give, and a hypothetical landlord be willing to take, for the right to occupy the buildings and to use the machinery; it being assumed that the hypothetical landlord provided both building and machinery.

The Poor Rate is now embodied in the General rate, and in so far as plant and machinery is rateable, the Case Law above referred to is superseded by the Rating and Valuation Act, 1925; but the Act does not apply to the Metropolis, only to England and Wales. The Third Schedule of the Act provides that certain classes of plant and machinery shall be treated as forming part of the rateable hereditament, and shall be included in the general valuation of the premises and pay rates in full; while other classes of plant and machinery are to be excluded from that valuation. The following types of machinery are to be taken into account in valuing any hereditament occupied for trade purposes, other than any hereditament the value of which is ascertained by reference to the accounts, receipts or profits of the undertaking carried on therein, viz., machinery and plant used mainly for generating, etc., power, heating, cooling, lighting, draining, ventilating, or supplying water to the hereditament, or protecting it from fire; lifts, railway and tramway lines, and any plant or machinery of the nature of a building, including gas-holders, blast-furnaces, coke ovens, tar-distilling plant, cupolas, and water towers with tanks.

Broadly speaking, the Act includes in rating, machinery which forms part of the hereditament or is "of the nature of a building or structure," and excludes from rating "process machinery," loose tools, and plant.

The various classes of machinery defined and detailed in a list and approved by the Minister of Health will be substituted for the Third Schedule above referred to; and any occupier affected may (under Section 24 of the Act) demand particulars in writing from the rating authority or assessment committee concerned, stating what machinery and plant have been deemed part of the hereditament. Further, if any question arises before an assessment committee, or before Quarter Sessions, as to whether any particular machinery or plant falls within the approved list, it may be referred, by consent of the parties, to one of a special panel of referees, now formed, whose decision is final.

British Standard Specifications for Paints, Etc.

The British Engineering Standards Association has just issued eight new British standard specifications for blanc fixe, lead chromes, Prussian blue, carbon black, bone black, vegetable black, lamp black and mineral black. They contain clauses regulating the composition, together with standard reception tests, for the purchase of these materials, together with appendices giving methods of carrying out the tests. Copies of these eight new specifications (Nos. 281/288) can be obtained from the B.E.S.A. Publications Department, 28, Victoria Street, London, S.W.1, price 2s. 2d. each, post free.

THE TRADE UNIONS AND TRADE DISPUTES BILL

In Committee.

On the 13th ult. the Committee reached Clause 8 (2) of the Trade Unions and Trade Disputes Bill, which contains the definition of the expression "strike" as meaning "the cessation of work by a body of persons employed acting in combination, or a concerted refusal, or a refusal under a common understanding of any number of persons who are, or have been, employed to continue to work or to accept employment." This clause was passed unamended, but on the motion of the Government a definition of the expression "lock out" was added as meaning "the closing of a place of employment or the suspension of work, or the refusal by an employer to continue to employ any number of persons employed by him in consequence of a dispute, done with a view to compelling those persons, or to aid another employer in compelling persons employed by him to accept terms or conditions of or affecting employment." The Solicitor-General, in moving this addition to the clause, said that it was taken word for word from an amendment on the paper in the names of Mr. Clynes and Mr. A. Henderson. It has to be borne in mind that these definitions of "strike" and "lock out" do not involve either of them being illegal; their illegality will only arise when strikes or lockouts are engaged in with objects rendered illegal by the clauses of the Bill, notably clause 1.

During the discussion on the definition of the expression "strike" an attempt was made by Mr. A. Henderson to alter the definition of a "trade union" in the Trade Union Act, 1913, section 3, and also to insert it in clause 4 of this Bill with a view, as it was alleged, to securing equality as regards the political funds between employers' organisations and trade unions. The Attorney-General pointed out that clause 4 of the Bill applied equally to every union, whether it was a trade union of employers or workmen, but the proposed definition would include associations of employers which had not any of the statutory objects which constituted a trade union.

To avoid misapprehension it may be well to point out that the Bill contains no definition of what is a trade union; to ascertain that, the Trade Union Act, 1871, as amended by the Trade Union Act (Amendment) Act, 1876, has to be consulted. The joint effect of those Acts is to define a trade union as "Any combination, whether temporary or permanent, for regulating the relations between workmen and masters or between workmen and workmen or between masters and masters, or for imposing restrictive conditions on the conduct of any trade or business whether such combination would or would not, if the principal Act had not been passed, have been deemed to be an unlawful combination by reason of some or more of its purposes being in restraint of trade; Provided that this Act" (that is the principal Act of 1871) shall not affect (1) Any agreement between partners as to their own business, (2) any agreement between an employer and those employed by him as to such employment, (3) any agreement in consideration of the sale of the goodwill of a business or of instruction in any profession or handicraft. In the Trade Disputes Act, 1906, this definition was adopted, but declared to include any such combination, "notwithstanding that such combination may be a branch of a union." The Trade Union Act, 1913, which gave political powers, defined a "Trade Union" "for the purposes of the Trade Union Acts, 1871 to 1906, and this Act means any combination, whether temporary or permanent, the principal objects of which are under its constitution statutory objects." These statutory objects are defined in section 16 of the Trade Union Act (Amendment) Act, 1876.

An amendment was proposed by Sir Henry Slesser which would define the word "calculated" as used in the Bill as meaning "wilfully and maliciously intended," i.e., as applied to coercion of the Government, etc., but this amendment was defeated, the Attorney-General explaining that the meaning of the expression "calculate" as used in the Bill as applied to clause 1 would be that a strike, apart from other qualifications, must be one that was intended by its inevitable results to coerce the Government. An amendment moved with the object of defining the word "coercion" was also defeated.

The definition of "trade or industry" in section 1 subsection (3) was the subject of discussion, and an amendment was moved to make it include "any trades or industries associated together in the production or handling of any common product." The mover of this amendment referred to national bodies covering industries within which were separate unions (dustmen, lightermen, stevedores, warehousemen, carmen, coal-tippers, and trimmers were instanced), and asked what would happen in the case of an industry which embraced a number of crafts. The Attorney-General is reported as saying that if any number of workpeople were striking against a reduction of wages or an increase in hours, that would be a legitimate strike however many industries were involved, because the strike would be in furtherance of a trade dispute, and the amendment was defeated.

From the brief report of this answer it appears that a difficulty may occur in enforcing section 1 of the Bill by which a strike is illegal which has any object other than or in addition to the furtherance of a trade dispute within the trade or industry in which the strikers are engaged which is designed or calculated to coerce the Government. Supposing disputes to be raised as regards wages or hours which are not genuine disputes but represent impossible demands put forward to cover a strike, the ulterior object aimed at, viz., an attempt to coerce the Government, may be exceedingly difficult of proof; the genuineness of the trade dispute seems to lie at the root of the whole matter but is excessively difficult to define. In many industries strikes have occurred on wages and hours where it has been very difficult for the public to decide whether the demands were reasonable or fantastic, but under the Bill it appears that this question may have to be determined by the Courts before the provisions of the Bill can be put in force.

This really concluded the consideration of the Bill as it stands, but an amendment was moved adding a conciliation scheme on the Canadian model, which the Government was unable to accept as a part of this Bill, on two grounds, as stated by the Minister of Labour, firstly, because they did not wish to go farther than was absolutely necessary in this Bill in preventing the right to strike, and secondly, because they were not assured that the Canadian system would prove practicable in this country without change, but an inquiry by a Committee into this scheme apart from this Bill was offered by the Government. We shall deal with this scheme in a separate article.

Report and Third Reading.

The Bill passed its third reading, further amendments or promises of amendment having been made during the report stage. The Bill has been immensely improved during its passage through the House of Commons, and there can be little doubt that any cases of real grievance were removed. The Parliamentary Labour Party in their efforts to damage the Bill in the eyes of their constituents have sometimes gone a little too far and proved the necessity for the Bill; thus Mr. Snowden at the third reading, having characterised it as a piece of class legislation, in his peroration is reported as having said. "It was the duty of the community to ensure fair conditions, and if the community would not do that the community must suffer. If the community would not remove the cause of strikes, then the community must suffer the hardships, the strikes. Governments were the representatives of the community, and therefore the community was right to coerce the Government to compel them to deal with industrial grievances." The Government must be grateful to Mr. Snowden for having thus at the last moment provided them with an apologia for the Bill. Throughout the debates on this measure the Opposition have tended to confuse trade unionists with the community as a whole and Mr. Snowden again does so in this passage. Some 12 millions, at the outside, of a population of 45 millions, if they allege they have a grievance, are to hold up the 33 millions until their grievances are remedied, this being what was attempted last year. Not one half of the 12 millions were probably in favour of the general strike, and the nation was supposed to accept a new Government of some 6 million trade unionists, or less, a condition no Government worthy of the name could accept, unless their leadership was of that character admitted by some members of the Opposition to prevail in trade union circles, viz., "not follow my leader," but follow the men. When a clause was inserted in the Bill, exempting the rank-and-file from its penal provisions, it was asserted that the leaders were in the hands of the men, but it is a significant fact that the general strike was called by the General Council of the Trade Union Congress.

The community, as distinguished from the comparatively small body of trade unionists, is alive to the disastrous consequences of a general strike and is still suffering from its effects; they see that it ruins the trade of the country, and is as bad for the working section of the community as for everyone else, and they expected that this would be recognised by the trade union leaders.

A most important amendment was introduced by the Government on the report stage, which appears not to have received the notice which it deserves. The Attorney-General undertook to insert a clause which would provide that no proceeding should be taken against anyone under Clause 1 without the fiat of the Attorney-General.

Exception was taken to the use of the word "calculated" as regards coercion of the Government, and here a promise was given on behalf of the Government that in the House of Lords an amendment would be introduced which would have the effect of interpreting the expression as "of which the natural result will be" or "which will probably result in" coercion of the Government.

The Opposition cannot complain that the Bill has been carried without any regard to legitimate criticism. Every reasonable suggestion has been carefully considered, and amendments have been introduced to meet specific causes of complaint. As regards the strike clauses, the object of the Bill is now abuntantly clear it is intended simply to safeguard the community, and, unless the community is again threatened by the trade union section, there is no reason why those clauses of the Bill when it becomes a statute should ever be put in force at all.

Building Workers' Conference.

The National Federation of Building Trades Operatives has ended its annual conference at Aberdeen.

Mr. Thomas Barron (Glasgow) was re-elected president and Mr. George Elmer (London) was appointed vice-president. The Emergency Committee was constituted as follows: Messrs. H. McPherson (Glasgow), D. Merson (Manchester), A. Gill (Leeds), J. Welsh (Middlesbrough), W. Pickles (Manchester), and L. Macdonald (London). Norwich was selected as the place of the next conference.

NEW BUILDINGS IN LONDON

Aldwych.—Building.—A recommendation has been approved by the London County Council to lease sites, with frontages to Aldwych to the east and west of Bush House, to the Bush House, Ltd.

Bermondsey. — Station. — The London County Council are to erect a fire station at the corner of Wolseley-street and Jacob-street, Dockhead. The plans have been prepared by the Chief Architect to the Council.

Croydon.—Alterations.—Alterations are to be made to the entrance to Shirley Schools, Wickham-road, for the Bermondsey Board of Guardians. Messrs. Newman and Newman, St. Thomas-chambers, Railway Approach, S.E.1, are the architects. Tenders are now being invited.

Croydon.—Shops.—Further extensions to Messrs. Allders' premises at North End, Croydon, are being carried out by their own building department. Messrs. Young & Co., 6, Queen Anne's-gate, Westminster, are supplying the constructional steelwork.

Enfield.—Houses.—The Urban District Council are inviting tenders for the erection of 244 houses on a site adjacent to Albany-Park, Enfield Highway. The plans have been prepared by Mr. H. R. Crabb, surveyor.

Goodmayes.—Church.—The foundation stones of the Goodmayes Congregational Church, which is being erected in Goodmayes Green-lane, has been laid. The work is being executed by Messrs. Henry Knight & Son, of 16, Bruce-grove, Tottenham, under contract for £8,557, under the supervision of the architects, Messrs. George Baines & Son, FF.R.I.B.A., 121, Victoria-street, S.W.1.

Hornsey.—School. — Messrs Galbraith Bros., Ltd., of Camberwell, S.E.5, are the builders for the new Council school to be erected at Muswell-hill. The school is to be known as the "Coldfall School" and is for the Hornsey Borough Council. The tender price is £27,926

Kensington.—Housing.—The consent of the London County Council has been given, subject to the consent of the Minister of Health, for the freehold of the land, about 8 acres in extent in St. Quintin-park, Kensington, with a frontage to Dalgarno-gardens, to be sold for £15,000 to the Sutton Dwellings Trust for the erection of working-class dwellings.

Kentish Town-road.—Rebuilding.—The St. Pancras Borough Council recommend that the Superintending Architect of the London County Council be informed that the Borough Council are prepared to approve of the proposal to rebuild the premises, 241, Kentish Town-road.

Lambeth.—Garages.—Messrs. Payne and Norman, builders, of 324, Clapham-road, S.W.9, are to erect garages at 117, Dorset-road.

Roehampton.—Hall.—The Churchwardens of St. Margaret's, Putney, are purchasing a site from the London County Council for the erection of a parish hall. The site is on the L.C.C. Roehampton estate.

Strand.—Hotel.—The London County Council recommend that the Grand Hotel, Northumberland-avenue, be sold for £300,000 to the Gordon Hotels, Ltd.

Tower-hill.—Memorial —A new memorial is to be erected on Tower-hill for the Imperial War Graves Commission. The memorial is for the missing dead of the Mercantile Marine. Tenders are now being invited.

Westminster.—Hotel.—The co-operative movement has formed a society to be known as the Hotel Co-operative Society, Ltd., to finance the erection of a new hotel, club, and restaurant in Artillery-road, Westminster.

Wimbledon.—Extensions.—Belmont Hall, Wimbledon Common, has now been purchased by the governing body of Southlands Training College and the Wesleyan Education Committee. The present mansion is to be enlarged by the erection of a dining hall to accommodate 160 students. Plans have also been prepared for two additional blocks of bedroom studies.

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

Following is a list of abbreviations:—Borough Surveyor, B.S.; Borough Engineer, B.E.; District Surveyor, D.S.; Clerk, C.; Town Clerk, T.C.; County Engineer, C.E.; County Surveyor, C.S.; County Architect, C.A.; Surveyor, S.; Engineer, E.; Borough Architect, B.A.; Architect, A.

Potter; 16 lock-up garages and office on land rear of High-st., F. G. Searle, per J. E. Lund; 10 houses and 4 garages on Chatham-rd., J. H. Howard; 6 lock-up garages on Tarring-rd., J. F. Collier.—T.C. received sanction to £8,622 in connection with pier pavilion.

YORK.—City Council recommend that the convenience for ladies be constructed underground in St. Sampson's-sq., and have instructed city engineer to prepare plans.

PLUMBING TRADES NATIONAL APPRENTICESHIP COUNCIL

A MEETING of this Council was held at 81, Gower-street, London, W.C., on June 15, with Mr. Ernest Lesser (Ministry of Labour) in the chair. As the result of further correspondence with the City and Guilds of London Institute regarding the proposal to limit the award of the Lead Manufacturers' Association Prizes to candidates who were under 21 years of age at the time of taking the Final Examination, it was resolved that these prizes should for the present continue to be awarded on the existing basis. It was mentioned that a deputation representative of the plumbing trade was about to suggest to the Board of Education the desirability of setting up an Intermediate Examination. Encouraging reports were submitted as to the progress of the scheme in North-east Lancashire and on the North-east Coast. Mr. Thacker reported that in the former district it had been decided that all plumbing apprentices under 18 years of age must become indentured under the National Scheme within three months. Mr. Hoey had been instrumental in arousing much interest and enthusiasm for the Scheme.

On the North-east Coast it was reported that there were 140 apprentices in the employ of 54 employers. A report had also been received from the West Riding of Yorkshire. Success had not yet attended the efforts made to inaugurate the Scheme in the Cardiff district, but it was hoped that when the acute trade depression resulting from the coal strike had passed away, a further attempt would have more fruitful results.

A similar report was received from the Derby district, where Mr. Thacker had addressed a meeting of employers. The opinion was expressed that it might be better to work for the formation of an Area Council, with headquarters at Leicester, rather than at Derby or Nottingham, and it was finally resolved to endeavour to secure the good offices of Mr. Skellington, of Leicester, in the matter.

Kelly's Directory of Merchants, Manufacturers and Shippers of the World.

This Directory, of which we have received the 1927 edition, contains a list of the names of merchants, manufacturers and shippers throughout the world. It combines all the characteristics of an English publication with those of a universal commercial directory, which will be intelligible to readers, whatsoever their nationality may be. All data can be consulted in any language. The Directory begins with an alphabetical index of all the countries and towns given in it. After the name of each country and town is given the number of the page on which the information relating to that country or town will be found. Next follows the general index in English of the various industries and products. Under each of these "trade headings" is given an alphabetical list of the places in the different countries where such industry or trade is carried on, and following this will be found in different languages a series of indices to trades and industries. By means of these vocabularies a user of the Directory knowing any of these languages is enabled to identify the headings given in the general index in English. The Directory is divided in the following manner:—Vol. 1, Europe, Asia, Africa, America (Central, North and South) and the West Indies. Vol. 2, Great Britain and her Colonies, Possessions and Overseas Dominions. The British section, instead of being divided into towns as the sections relating to other countries are, is divided into three parts: Provinces (i.e., England, Scotland and Wales), London (i.e., the London Postal District), and Ireland; each part contains first the alphabetical list of firms and then their classification under the trade headings. The Directory (Vols. 1 and 2) may be obtained from Messrs. Kelly's Directories, Ltd., 186, Strand, W.C., price 64s., post free.

Frensham Pond Saved.

From a letter addressed to *The Times* from Mr. Aubrey T. Lawrence, it is seen that at Frensham the Great Pond has, for the time being, been saved from the proximity of a sewage farm. The Alton Rural Council have decided not to proceed with their portion of the scheme, and there is no likelihood, it is understood, of the Farnham Council persisting alone in their portion.

THE SCOTTISH BUILDER

NEW BUILDINGS IN SCOTLAND

Grangemouth.—Houses.—The Dean of Guild Court has sanctioned the erection of 56 houses in the new housing area, and 12 in Kelvin-street, in the Old Town, for the Corporation.

Dundee.—Buildings.—Plans and sections of the following proposed new buildings, etc., have been lodged at the office of the City Engineer :—

Albert-street.—Alterations for the Commercial Bank of Scotland.

Brook-street, Broughty Ferry.—Alterations and additions for the Dundee Eastern Co-op. Society, Ltd. Mr. G. Jamieson, architect, 20, Whitehall-street.

Strathmore-avenue.—House and restaurant for Mr. Nicola Soave. Messrs. Gordon and Scrimgeour, architects, 39, High-street.

Glasgow.—Housing.—Contracts amounting to over £144,000 have been approved by the Corporation Housing Committee for various works in connection with the construction of the second section of the housing scheme at Balernock.

Edinburgh.—Buildings.—The Edinburgh University Court has received permission of the Dean of Guild Court to proceed with the erection of the new Zoology Department at West Mains-road. Permission to make alterations at 51-54, George-square, has also been granted to the University.

Other warrants granted were:—

Governors of Fettes Trust—boarding-house at Fettes College;

Roman Catholic Church Trustees—addition at St. Peter's R.C. Church, Falcon-avenue;

Leith Provident Co-operative Society—store, cloakroom, and other accommodation at Bangor-road, Leith.

West Perthshire. — Reconstruction. — An important scheme for the reconstruction of the Trossachs-road is being proposed by the West Perthshire District Committee. This scheme is estimated to cost £32,000.

OBITUARY

Thomas Purves Marwick.

We regret to record the death of Mr. Thomas Purves Marwick, F.R.I.B.A., who died at Edinburgh on Sunday last. The son of an Orcadian, he himself was brought up and educated in Edinburgh, and there carried on for many years a large and successful business as architect and valuator. He was recognised as one of the foremost experts in Scotland in connection with references relating to disturbance for compulsory acquisition of property and all matters relating thereto and to questions of rating. He gave ungrudging service to the promotion of the Edinburgh A.A., of which he was a member, and he held the office of President of the Incorporation of Architects in Scotland from 1922-24. Holding the degrees F.S.I., F.S.A., he was Ashpitel Prizeman in 1882 and Institute Medallist in 1884. He took a keen interest in all matters relating to the improvement of the city from an architectural, æsthetic, and sanitary point of view, and his services in this way were ungrudgingly rendered and highly appreciated. He was a man of much culture and wide reading, broad sympathies and warm-hearted. In all social questions he was always ready with wise advice and assistance.

The death has taken place of Mr. Haddon Anderson Bower, 31, Queen's-road, an Aberdeen granite merchant.

Housing Progress in Scotland.

The following figures show the progress that has been made in State-aided housing schemes in Scotland to May 31, 1927 :—

	Completed.	Under Construction.
1919 Act	25,542 ...	8
Private Subsidy Schemes (1919 Additional Powers Act) ...	2,324 ...	—
Slum Clearance Schemes	5,400 ...	2,357
1923 Act :—		
By Local Authorities	3,433 ...	519
By Private Enterprise	9,820 ...	2,927
1924 Act :—		
By Local Authorities	9,286 ...	12,999
By Private Enterprise	270 ...	191
Demonstration Houses	17 ...	—
	56,092 ...	19,001

Culloden House to be Sold.

Culloden House, which has for many years belonged to the family of Forbes of Culloden, has been placed in the hands of the agents, for sale in September. In 1745 the property belonged to Duncan Forbes, Lord President of the Court of Session, and he, having been forced to retreat, Prince Charlie occupied the house previous to the Battle of Culloden. In addition to the bedroom in which the Prince slept, there are interesting relics of his visit, and the actual battlefield is but a mile distant.

New Scottish Schools.

The Scottish Building and Monumental Workers' Association have decided to approach the Glasgow Education Authority to urge the expedition of the schemes for the building of twelve new schools and additions to existing schools. It is also proposed to urge the authority, when placing the contracts, to stipulate for the use of stone in the construction of the buildings. The Union state that a large number of members are unemployed, and that an improvement in trade would follow if the Education Authority would proceed with their contemplated building plans.

BUILDING TRADE WAGES IN SCOTLAND.*

The following are the present rates of wages in the building trade in the principal towns of Scotland. Every endeavour is made to ensure accuracy, but we cannot be responsible for errors that may occur :—

British Artists' Exhibitions.

The fifth exhibition of British artists' work under Sir Joseph Duveen's scheme will open in mid-September at the Bradford City Art Gallery. Forms of entry for this exhibition will be sent to all artists whose work has been accepted for previous exhibitions, and artists who have not previously submitted their work are invited to write for particulars to the secretary, British Artists' Exhibitions, 7, Garrick-street, London, W.C.2.

* All these applications are now in the stage in which opposition to the grant of Patents upon them may be made.

TRADE NEWS

The Incorporated London Academy of Music.

Considerable reconstruction has been carried out to the premises in Harrington-road, S.W., of this Institution—referred to in our notes of this week. The building has been fitted throughout with central heating by Messrs. Rosser & Russell: electric lighting by Troughton & Young; a new floor by the Kleine Patent Flooring Syndicate, while other reconstruction work has been carried out by Messrs. Smith & Donovan.

Travelling Exhibit of Boilers.

The travelling exhibit of the National Radiator Company, Ltd., of Hull, fitted with a working installation of the "Ideal" Cookanheat and "Ideal" Classic radiators, will demonstrate as follows:—July 11, Market Ground, Wilmslow; July 12, opposite Station Clock, Altrincham; July 13, Castle Yard, Market-place, Stockport; July 14, 15, in front of Palatine Cinema and Café, and 16, Palatine-road, Withington (at tram terminus), Manchester.

The Westminster Bank, Ltd.

The directors of Westminster Bank Ltd., have declared an interim dividend of 10 per cent. for the half-year ended June 30 on the £20 shares, and the maximum dividend of 6¼ per cent. on the £1 shares for the same period.

The dividends, 10s. per share and 1s. 3d. per share respectively (both less income tax), will be payable on August 2.

The Waygood-Otis Sports.

The eighteenth annual sports and garden party of Messrs. Waygood-Otis, Ltd., were held on their picturesque club ground at Orchard Way, Elmers End. The various events were confined to club members and their children, and a lengthy programme was carried through in prompt manner. G. R. Maryon was the principal winner, as during the afternoon he carried off premier honours in four events. He also retained the "H. C. Walker" Cup presented as a challenge trophy for the highest individual points for wins or places during the meeting.

Several fancy events and children's races were included on the programme, and following the presentation of prizes by Mrs. D. W. R. Green, dancing on the lawn was enjoyed to the accompaniment of music by the Southern Military Band.

Paints and Varnishes.

Messrs. Goodlass, Wall & Co., Ltd., of Liverpool, have opened a large depot, we are informed, at 238-240, Whitechapel-road, E., where large stocks of their paints, colours and varnishes will be held for prompt London and district delivery.

Greenwich Health Week.

The Greenwich Borough Council, through the officials of the Public Health Department, have arranged a very comprehensive exhibition of sanitation and hygienic interest, at the Municipal Buildings, Royal Hill, from July 5 to 9, and in view of the attention that is now being given to the preservation of old buildings, which, although often beautiful, are frequently damp. It is interesting to find here a very complete set of models showing the practical application to such purposes of the "Pudlo" brand cement waterproofing powder. The sanitary inspectors of the borough have found it possible to save many buildings that had been scheduled for demolition, because of their dampness, by applying renderings of sand and cement, waterproofed by the addition of "Pudlo" brand powder.

Compo Flooring.

In the description of the Friends' House, Euston-road, published in THE BUILDER for June 24, Messrs. Adamsez, Ltd., the sanitary engineers, of Scotswood-on-Tyne, were quoted as responsible for the compo floors. This was in error, as this firm do not handle such material, manufacturing only sanitary fittings.

TENDERS

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXXIII. No. 4406. JULY 15, 1927.

ART AND THE ARTISAN

IT was this title—not that of "Art and the Craftsman"—that Professor Östberg chose last November when he gave an address at University College, Dublin. The distinction has a valuable moral. It is precisely this sense of art in the artisan that has given to modern Sweden its racial idiom in brick, joint, iron, and paint. Here with us, the flickering light of applied art in industry was kept burning in the studio, but not in the shop. Valiant spirits, such as Morris and Crane, stimulated the Art Workers' Guild and laid the foundations of a possible English craft school to-day, but, in spite of its original intention, the movement has not permeated through the vast middle-class direct to the man with the tool. He has become and he remains a tradesman, possibly as good a tradesman as can be found, but he has forgotten that his trade was ever a craft, and so he has lost the artistic verve which still lingers in the walls of mediæval cathedrals, cottages, and even old barns.

It is idle to seek for a scapegoat; in the economic mill we find employer, trade union, and the ill-equipped board-school product equally ground down to the grim necessity of specialised labour, to competing restrictions rather than to widening opportunities, and the life-blood of craft work has almost run dry. Architects must take their share of the blame. They have certainly, both individually and as a body, identified themselves with the studio movement towards better craftsmanship; on the whole they have tried to persuade clients to support those firms that create conscientious work; but they have accepted the limitation that only a few firms can undertake such work, and these firms are certainly not staffed by people that Östberg would call "artisans." In such an aristocratic atmosphere fads and fashions tend to flourish, the air is quickly exhausted, and wayward moods rather than broad tendencies prevail; as one result we get the specialised "art product" detached, withdrawn from modern life. Clearly if the architect is to help towards a more normal mating between man and workmanship he must seek other fields, where meetings between the two sides can be planned naturally, and where a marriage of affection and not of expediency will result.

This is not to suggest the withdrawal of subscriptions to existing craft guilds, since there has probably never been a moment when their efficiency was greater nor their need more urgent, but it does mean taking the trouble personally to find out what has been done and is being done, and of using every effort to convert the present platonic interest in handcraft to more active account.

The two most fertile agencies at the moment are probably those connected with the Art in Industry Association and the Rural Industries Bureau—the one the voluntary product of important producing firms, the other the child of the State, sponsored by the Board of Agriculture. Of the two the first is more generally known to architects and its efforts should be supported whenever possible, while the second is so modest concerning its activities that it has lost considerable propaganda virtue through not blowing its own trumpet. The Rural Industries Bureau, with its headquarters at 26, Eccleston-street, Pimlico, was established at the instigation of the Board of Agriculture and is at present maintained by grants from the Development Fund, its special function being to give information and advice to inquirers on various country trades and crafts. Based upon a comprehensive survey, a list of existing industries has been drawn up and special stress is laid on standard and output. By means of admirable pamphlets, reinforced by local and travelling exhibitions, interest is stimulated and a more effective output encouraged, while the Bureau is in constant touch with market and trade conditions.

The work of the Bureau thus tends not only to develop the skill of special craftsmen who may become absorbed, say, by firms in the Art in Industry Association, but it serves to re-introduce a sense of folk-craft and local character. It provides a mine of information on where to get materials, where trained workmen are to be discovered; it gives advice on outfit, bookkeeping, management, and marketing. Introduced by the offices of the Bureau, a keen young smith and a keen architect could embark on a variety of experimental fittings which would cost the client little more than he would have to pay for other goods. But if the union is to be fruitful the architect should encourage the workman to think for himself. However well rendered on the drawing board, iron craft-work can only come to life on the anvil, and it is there that its final form should be decided. In the paucity of creative work the architect, especially if conscientious, has formed the habit of deciding his own details, of saying "do this as I draw it," not of inspiring a general idea and then letting the worker express himself through his own tool in his own medium. This defect has allowed much punctilious work to sink into mediocrity; it is safe, not creative.

Even in regions yet untouched by outside organisation, the architect who cares about it can find time, especially on a small job, to interest the men working and to identify them personally with the final result. It is not enough for him to point with an umbrella in order to demonstrate to the foreman how the jointing is to be finished; he should know the men who are going to do it and talk to them himself. A good mason will soon become more interested in mixing his bricks than he has previously been in matching them. A mechanically treated wash or plaster rendering may detract from a good design, while there are places where the official "four coats oil," applied as evenly as on a porcelain bathfinish, is inappropriate and toneless. The technical skill of a master painter is as remarkable as his ignorance and non-appreciation of colour so often is. If indeed he had once enjoyed pure colour his life among the stereotyped "safe shades" beloved of the English race would have long since proved beyond his endurance; but, given an interest and a fair scope, that same workman is almost certain to respond. Simple effects of applied line in ordinary distemper, if introduced discreetly, should lead him to a pleasant confidence and satisfaction in freehand; the stencil line beside it will appear illbred. Even a half-hour spent in conversation with a "lettering writer" might induce that expert to prefer what is good and hence, indirectly, to influence the taste of those employing him.

These are only suggestions offered at random, but they may lead to the discovery of many better ways of awakening the craft spirit in the artisan. The architect should realise, first, that until more artisans are craftsmen, architecture must fall short of the architect's ideal and, secondly, that craftwork can only possess distinction and human character when the workman has been infused with the beginnings of imagination.

NOTES

The Liverpool Cenotaph.

We regret to find some misapprehension of the motives actuating those who have raised the question of the public exhibition of a model of the proposed Liverpool Cenotaph. Mr. Maurice Webb, in a letter to the *Liverpool Post*, speaks of "the present agitation to abandon the scheme altogether." This is an entire misconception of the motives of the so-called "agitation." All that has been desired is an opportunity for the public to judge of the effect of the model *in situ*. There has been no claim to disregard the assessor's decision as to Mr. Budden's able design. Mr. Budden's brother architects will, we are sure, desire nothing better than that the design shall be worthily carried out, either on the selected site, or a more suitable one if such there be. Their only request is that the public may judge of the effect of the model on the site selected.

The Fine Arts Commission.

The two latest appointments to the Royal Fine Arts Commission will be widely approved by those who hope to see the best results from expert and sympathetic counsel. Mr. Adshead, whose ability as an architect, a professor of architecture, and a town-planning exponent, provides a real equipment for catholicity of vision, and Sir Giles Scott, whose outstanding success at Liverpool, and whose versatility of design in other ways, promiseb road and generous views on Art, are just two of the best who could have been asked to give their services to the Commission.

The Parking of Cars.

It must have occurred to many of us that the parking of cars is one of the problems awaiting solution for the street authorities. The continuous line of cars round St. James's Square, Lincoln's Inn Fields, and other places, show that the bestowal of cars during business hours has become a problem which will have to be seriously dealt with. It has been often suggested that the owners of cars are not taking their full share of the burdens of taxation, whilst the railway companies whose revenue is affected by the conti- all- extending use of cars are called to pay local rates for their town y stations, though it is to the pres railways and stations that the pros of towns is so much indebted. Al the garage has become an item of widely extended revenue, and in its efficient development and control lies one of the factors for the adequate amenity of our towns.

Post-War Building in France.

The study of post-war architecture in the war areas of France, in the case of cities such as Soissons, which suffered so much destruction, enables us to form an estimate of the contribution which our own time is able to make towards the beauty of cities. And it is in many ways far from reassuring. Where the buildings of earlier periods no longer exist, we can measure the value of what is around us, free from adventitious attractions. It is noticeable how like earlier forms any tradition in regard to design influences the building. We may see instances of a carefully-designed building in the Gothic manner, but the tradition out of which it grew no longer existing, the result is quite conventional. On the other hand the shop buildings of the streets and the villas reveal the modern excesses of individualism which dominate so much to-day. France, like all of Europe, suffers from the licence of a half-educated democracy, enjoying a freedom it does not yet use well. Without the tie of tradition or efficiently directed education to restrain its outlook, novelty and self-assertion replace the graver forms of building and the repose which belongs to them. Yet we must hope that this is no less temporary in spirit than in actual form and that the foundations are being laid for something better.

The Time Factor in Architecture.

There is virtue in going slow and delay is better than raw haste, and we have to be careful of too easy acquiescence in the arguments which would seek to convince us that it is only a question of mental swiftness, or otherwise, variable in different individuals, as to the time building takes. That, in fact, it is not true the time issue is important in building. When we hear of a large cinema erected in seventeen weeks—which, to the sceptic of this new time philosophy, is only too apparent—are we to believe that the architect had a brain able to work swiftly, or that he was in the hands of an all pervading commercialism requiring booking office returns at the earliest possible moment. Time, it appears to us, is precisely the commodity we most abuse in our haste for results; and it would be much better not thus to deceive ourselves, seeing that the time element is an essential requirement of fine building, and that if we would build well, the time necessary to it cannot be disregarded.

The Scottish National War Memorial: Detail of Roof and Figure of St. Michael.

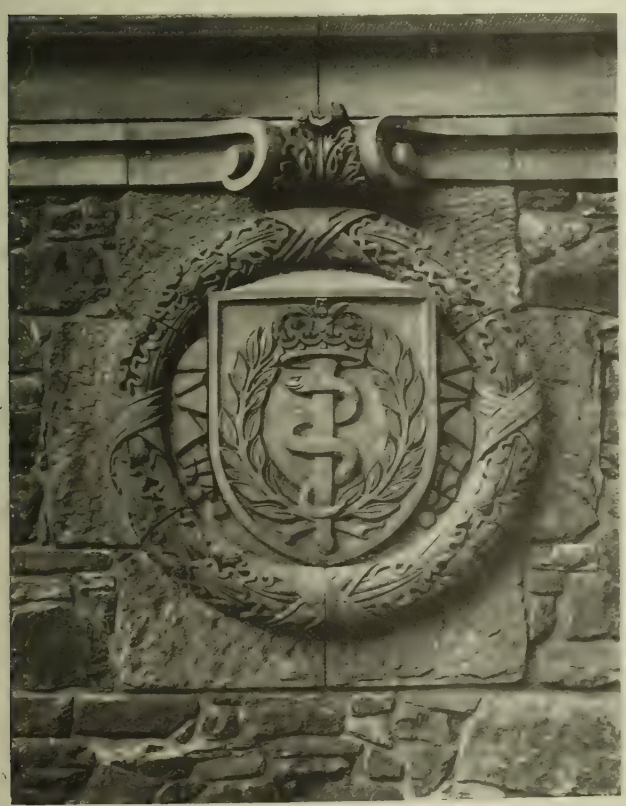
(*See pcg* 84.)

Control in Ireland

Mr. Horace T. O'Rourke, City Architect of Dublin, in a letter to *The Irish Times*, emphasizes the lamentable position in which the Rathmines Urban District Council finds itself. Rathmines is a suburb of Dublin, and Mr. O'Rourke remarks that "hardly anything which may happen on Rathmines Road in the future can make matters worse." On all sides are newly erected architectural monstrosities and what might have formed a fine and dignified approach to the City has become a second-rate Edgware Road. The Chairman of the Council has recently pointed out that there exists no direct statutory authority to prevent the æsthetic beauty of the area from being ruined. *The Irish Times*, in a leading article, deplores that the City of Dublin is the most glaring example that the town-planner could find, perhaps in all Europe, of the evils that come from neglect of his art in these days of rapid urban growth.

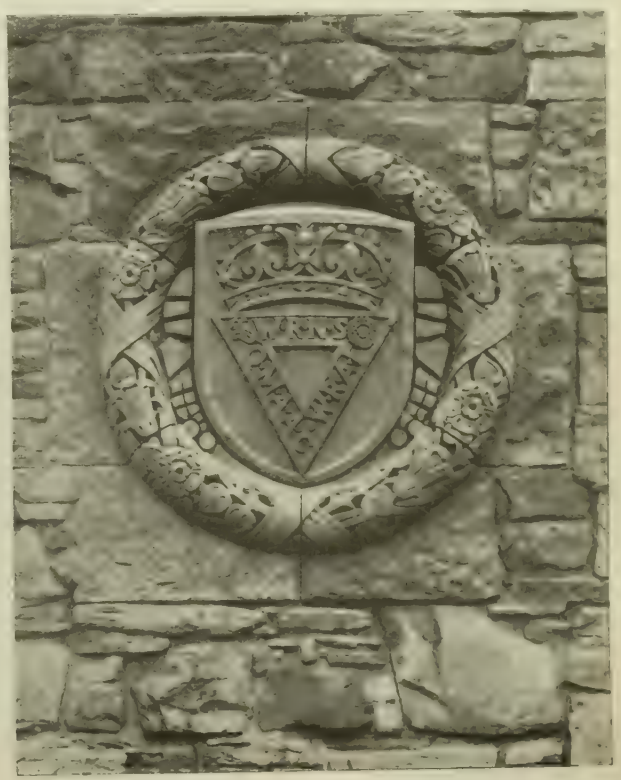
Dublin.

While we would hesitate to say that Dublin is as bad as that (being too strongly conscious of our own shortcomings) yet there exist in that city glaring examples of vandalism. A huge corrugated iron and cement garage has recently been erected in the middle of the open space that was once the historic Donnybrook Green; the beautiful canal banks and the Rotunda are disfigured with hoardings and chaotic advertisements; the tramway chimneys belch smoke in vast quantities. In spite of the magnificent work of the City Commissioners, much statutory control of a comprehensive character is required if the city is to be brought up to continental standards. A small country, young in self-government, may well have the power, the initiative, and the vision to institute such drastic and much-needed reforms. The movement in Ireland for organising, planning and controlling the æsthetics of the Free State capital will be followed with interest here.



The Scottish National War Memorial: Tunnellers' Plaque.

866,000 Houses.



Mr. Chamberlain's statement that 866,000 houses were erected in England and Wales between the beginning of 1919 and the end of March, 1927, shows how tremendous an effort has been made to deal with this problem. We should like, were it possible, to divide this number into two, showing how many of the above are houses and bungalows of which we may be proud, and how many represent a further disfigurement to our unfortunate country. We could possibly say, with a reasonable approach to accuracy, that half a million are devoid of any architectural quality, and that half of these are definite eyesores. It is the weakness of statistics that they indicate quantity but not quality. But we may at least congratulate ourselves that, although private enterprise is still woefully backward, the average of design is better.

"Architecture."

Of primary interest amongst the various contributions to the current number of *Architecture* is an article from the pen of Mr. R. Pape Cow on "The Parliament Building at Helsinki." This building, by Messrs. Borg, Siren and Aberg, is one of the most impressive of recent continental works, and Mr. Cowl writes authoritatively on the subject. There is a further notable contribution to the series on Architectural Criticism, entitled, "Theories and Etiquette," and other contributions are on "Form in Architecture," and "Blanc-de-Chine" pottery figures. Numerous illustrations include views of Mr. Basil Oliver's work at "Croach's," Sevenoaks, of Messrs. Richardson & Gill's Memorial Hall at University College and Sir Herbert Baker's Memorial Cloister at Winchester College.

GENERAL NEWS

Professional Announcements.

Mr. T. D. Atkinson and Mr. C. W. Long announce that their partnership agreement terminated in September of last year and will not be renewed. The practice will be continued by Mr. C. W. Long under the title of Messrs. Atkinson and Long.

Mr. Arthur F. Usher, F.R.I.B.A., and Mr. Joseph Hill, F.R.I.B.A., who are the partners in the firm of Messrs. Yetts, Sturdy & Usher, have removed their offices from 115, Moorgate, E.C. 2, to 34, Gordon-square, W.C. 1 (Telephone: Museum 0467); and Messrs. Lowry & Woodhouse have removed from 33, St. James's-street, to No. 15, Dean's-yard, S.W. 1 (Telephone: Victoria 5987).

Edwin Austin Abbey Memorial Scholarships.

Mr. George Raymond Carpenter, a student at the Beckenham School of Art, has been elected to a Minor Scholarship of £125 per annum under this scheme.

The Tylers' and Bricklayers' Company.

It will be of interest to our readers to learn that Mr. H. Greville Montgomery, Hon. A.R.I.B.A., has been installed as Master of the Tylers' and Bricklayers' Company for the ensuing year.

Sculptors' Medal.

The Royal Society of British Sculptors have awarded their medal "for the best work of the year by a British sculptor in any way exhibited to the public in London," to Mr. Gilbert Ledward, F.R.B.S., for his Guards' Memorial, near the Horse Guards Parade.

Fine Art Commission.

The King has appointed Sir Giles Gilbert Scott, R.A., and Professor S. D. Adshead to be members of the Royal Fine Art Commission to fill the vacancies caused by the retirement of Mr. J. A. Gotch and Mr. P. S. Worthington.

Engineer's Estate.

Sir James Kemnal, F.R.S.E., M.I.M.E., M.I.N.A., M.I.E.E., of Kemnal Manor, Chislehurst, and of Sandbanks, Poole, who died on February 8, aged 62, left unsettled property of the gross value of £452,726, with net personalty £438,495.

Honour for Sir Aston Webb.

The Albert Medal of the Royal Society of Arts, instituted in 1864 to commemorate the Prince Consort's presidency of the Society from 1843 to 1863 has been formally presented by the Duke of Connaught, the president of the Society, at his home, Clarence House, St. James's to Sir Aston Webb "for distinguished services to architecture."

Mr. W. A. Knowles.

Mr. W. A. Knowles, who has died at Ballycastle, at the age of 96, was a pioneer in Irish archæology. He was a Fellow of the Royal Society of Antiquaries and of the Royal Anthropological Society of Ireland, and a member of the Royal Irish Academy.

Mr. Charles E. Deacon.

We regret to record the death of Mr. Charles E. Deacon, F.R.I.B.A. Mr. Deacon was an authority on Gothic craftsmanship and detail, and having completed his articles with Sir James Picton, set up on his own account. He built several churches, amongst them being St. Dunstan's, Liverpool; St. Columba's, Egremont; and St. Stephen's, Prenton, while he also executed many commissions for the Liverpool School Board and Cheshire County Council and Birkenhead Education Committees.

The Honours List.

In connection with the recent tour of Australasia made by the Duke and Duchess of York, we note that the following distinctions have been conferred:—

C.M.G.

Mr. John Smith Murdoch, F.R.I.B.A., Director-General of Works and Chief Architect, Department of Works and Railways, Commonwealth of Australia.

O.B.E. (Civil Division).

Mr. Henry Maitland Rolland, Architect to the Federal Capital Commission.

Birmingham Town-Planning Exhibition.

Mr. Neville Chamberlain, M.P., Minister of Health, suggested as a practical problem for consideration the possibility of founding new cities to take the overflow from some of the old ones in declaring open a Regional and Town-Planning Exhibition and Conference held in Birmingham Town Hall. "I rather hope," he said, "that a conference of this kind will not part without giving some serious attention to the possibility of founding new cities, built on a definite plan, limited to a definite size, and making use of the experience and the knowledge that we have of the mistakes that have been committed in the past. I have no doubt in my own mind that the multiplication of what are known as garden cities would go a long way towards solving those costly problems which every industrial town in this country has to face to-day—the problem of the slums, and the problem of how to find housing accommodation for people within a reasonable distance of their work."

One was almost in despair, Mr. Chamberlain proceeded, when considering the overcrowded slums and dwellings in cities like London, Birmingham, Leeds, or Manchester. The problem seemed almost insoluble; and, indeed, the only really satisfactory solution would be, if it were possible, to take into the country not only the people but the work in which the people were engaged. The difficulty was to get a start. It was impossible to persuade a manufacturer to build a factory in the country if there was nowhere for his workpeople to live. On the other hand, it was very hard to induce people to build houses in the country unless they were quite sure that there was going to be work for them to do.

The Scottish National War Memorial: Detail of Figure of Valour.

(*See page* 84.)

COMPETITION NEWS

COMPETITIONS OPEN.

University Buildings, Western Australia. To cost £150,000. *Premiums*: £400, £300, £200. Open to British subjects or citizens of U.S.A. Assessors: Professor Leslie Wilkinson, F.R.I.B.A., Mr. A. R. L. Wright, L.R.I.B.A., President Royal Institute of Architects of Western Australia, and Member of University Senate Apply Agent-General for Western Australia, "Savoy House," 115–116, Strand, London, W.C.2, or Australian Trade Commission, 44, Whitehall-street, New York, U.S.A.	Particulars published in "Builder." Sending in date.
	Jan. 14 .. Aug. 23

The League of Nations' Conference Hall, Geneva.

We learn that the plans submitted for this competition are now on view in the Election Hall, at Geneva, and in an annexe constructed close by, daily (including Sundays) from 9 a.m. to noon, and from 2 p.m. to 6 p.m., until July 24.

Proposed Public Hall Competition, Chagford, Devon.

The Competitions Committee of the R.I.B.A. call the attention of members to the fact that the conditions of the above competition are not in accordance with the Regulations of the R.I.B.A. The Competitions Committee are in negotiation with the promoters in the hope of securing an amendment. In the meantime, members are advised to take no part in the competition.

Wimbledon's Municipal Buildings.

The Wimbledon Corporation invite designs in competition for a new Town Hall and Municipal Buildings, proposed to be erected on a site in the Broadway, Wimbledon. Mr. H. V. Ashley, F.R.I.B.A., is assessor, and premiums of £200, £150 and £75 are offered. Conditions of the competition may be obtained upon deposit of £2 2s. (returnable) from Mr. Herbert Emerson Smith, LL.B., Town Clerk, on and after July 20.

Designs are to be received on or before November 30.

An Essay Competition.

With a view of giving architectural students an opportunity of seeing some well-known French towns, and at the same time impressing upon them the uses of copper as a roofing material, the Association of Architects, Surveyors, and Technical Assistants, 26, Buckingham-gate, Westminster, S.W., are organising, in conjunction with Messrs. Ewart & Son, Ltd., of 346-350, Euston-road, N.W. 1, a competition in connection with their tour to Chartres, Orleans, and the Chateaux of the Loire, in September. The subject of the competition is entitled:—"The Historic, Æsthetic, and Economic Use of Copper as a Roofing Material," and the authors of the seven best essays will be invited to join the party as guests—that is, they will take part in the tour exactly as the other members, but all railway fares, hotel expenses, etc., will be paid, with the exception, of course, of the usual personal expenses.

An Architect's Distinction.

Mr. Thomas Adams, F.S.I., P.P.T.P.I., Hon.Memb.Inst.M. & C.E., senior member of the firm of Adams, Thompson & Fry, town-planning consultants and architects of London and New York, has been elected an Honorary Member of the American Institute of Architects for service to the ideals of the architectural profession. Mr. Adams is associated with his partners as consultant on the regional plan of New York and its environs (5,528 square miles) and on regional and town plans of large parts of the London Home Counties.

The Scottish National War Memorial : Entrance to Shrine.
Sir Robert Lorimer, A.R.A., F.R.I.B.A., Architect.

THE SCOTTISH NATIONAL WAR MEMORIAL

Designed by Sir ROBERT LORIMER, A.R.A., R.S.A., F.R.I.B.A.

THE INTERIOR.

"Good architecture is masterly structure with adequate workmanship; the highest architecture is likely to have fit sculpture and painting integrally bound up with it."—Lethaby.

Within this Shrine Peace and Beauty are enthroned. The first impression on entering the Hall of Honour from the porch is one of enchantment at the jewel-like beauty of the stained glass. The subtle interlacing of the primary and complementary colours is so perfectly done that we get an impression of unity and balance which is not surpassed even at Chartres and York. The delicacy and evenness of the pattern of design is so perfectly handled that the plane of the windows is undisturbed. When we think of Renold's windows at Oxford with their pictorial absurdities we must congratulate ourselves that at last we have emerged from the decadence of the Victorian era.

We cannot here deal with the individual windows and their story and detail, but the simplicity of the leading which recalls some of the best work at St. Cross, Winchester, and the Eve spinning panel at Martham Church, Norfolk, give that traditional touch which justifies the use of modern subjects and makes this pictorial record of the Great War of such immense historical value.

Dr. Douglas Strachan has been inspired by his theme and has solved that hitherto considered impossible problem of depicting the history of our time in stained glass.

The wrought-iron entrance gates which enclose the apsidal Shrine are fine in lines and masterly in craftsmanship. Mr. Thomas Hadden is to be congratulated on the technique of this work. In the design we see faint echoes of the south choir aisle gates at Beverley, the gates at Winchester Castle, Traquair House and Donibristle. Seen through this grille the glass, altar, steel casket, processional frieze and soaring shafts of the vaulting are united into one pattern, in which the play of light and colour interlace and blend into one charming whole. This frieze was the work of Messrs. Singer, of Frome, being the only work not done in Scotland. The altar is of a green Belgian marble with a base of Ailsa Craig granite and with its four weeping angels by Mrs. Meredith is a most distinguished piece of work. Behind the altar the processional frieze is most effective, and forms a decorative background, which sets off the simplicity and beauty of proportion of the altar. The play of colour and tone seems all blended together by the light from the windows.

The detail of the mouldings of the shafts, bases and vaulting is somewhat purer and more gothic than in the exterior work and that in the Hall of Honour. Here we have faint echoes of the work at Coldingham, Tynemouth, West Walton and Warmington.

The scabbled ashlar of the whole interior gives a texture which binds the whole together, and the treatment of the jointing which is recessed in the pointing gives a pattern and sense of scale to the whole.

Our first impression on entering the Hall of Honour is one of disappointment that the vault is in concrete. It seems an alien note with its single coffer in each bay in three simple square-edged sinkings. It seems out of scale and lacking in detail, but continued examination gives us the clue to this treatment. The walls are of a warm sandstone from Swinton quarry, and it soon becomes obvious that had this vault been panelled in small coffers like the lintels over the bays of the hall it would have proved distracting from the panelled walls which contain the various memorials to the regiments.

In our last article we stated that the arches dividing the various bays were of stone, but this is not the case—the whole vault is in concrete. This simplicity of treatment of the vault adds to the richness of the regimental memorials. The capitals are carved, the craftsman being Mr. Thomas Beattie. The panels in each bay are surrounded with moulded architraves kneed out at the spring and the base. The altars in each bay are bay-shaped and heavily moulded with a Scotch corbel feeling in the section. The regimental badges, crests and shields which were designed by Mr. John R. Sutherland, are richly coloured and echo the colour of the glass, thus preserving that unity of colour and tone which is so essential in interior decoration.

The large lettering which runs round the whole frieze of the order in the Hall of Honour is simple in character, and although we should have liked to see it treated more delicately, it may be that as it records the great engagements and battle-fronts of the war it is well that it should be emphasised as it is.

In the East Chapel we find the memorials to the Artillery and Engineers by Mr. Alex. Carrick, described in our last issue, and illustrate this. Here also is the Yeomanry memorial by Mr. Jackson, who is also responsible for the figure-work on the outside and inside of the Shrine arch and all the lettering. Here also is the panel of a Highlander, which is the memorial for the London, Liverpool and Tyneside Scottish. This panel is by Mrs. Meredith Williams.

In the West Chapel we have a masterly panel by Mrs. Meredith Williams to the R.A.M.C. Two stretcher-bearers carry a wounded soldier, who is being carefully tended by two nurses. It is a vigorous and appealing piece of work. Opposite this we find another panel, which is the women's memorial.

On the altar of each bay to the various regiments will be placed a book bound in red leather with a metal crest of the regiment on the front cover. These books contain the names of all the men of the regiment who fell or died as the result of the war. Space forbids of any further details, but the care, time and research which must have been spent to perfect this memorial with all its details must have been enormous.

It is earnestly hoped that a record will be made of all the craftsmen who took part in this work. In this connection, we desire to amend some statements made in our first article last week. The St. Michael figure was modelled, not by Mr. Jackson, but by Mrs. Meredith Williams; the King and the Queen have presented the steel casket in which will be enclosed the golden book, containing the names of the hundred thousand men who fell in the war, and lastly, the time taken to complete the memorial has been three years and not five.

To Mr. J. Cordiner, the clerk of works, who has supervised the work and interpreted the wishes and designs of Sir Robert, no ordinary praise is due. The controlling of so many varied types of workmen and craftsmen so that each was ready with his work at the moment it was wanted must have required most skilful organisation.

The great lesson of this national Shrine is that we are now approaching a time when the arts in Britain can express the history of our time in something like real terms of art. Scotland has indeed honoured her dead.

The Symbolism of the Memorial.

The North Barracks, which form the north side of Crown Square, were built in 1755 from the designs of Charles Tarrant. The south front was altered and the interior remodelled about 1870 from the designs of Robert Billings, who also added the bartisans at the corners and the cupola.

The old barrack, which was a three-story tenement, was gutted. The main walls were as far as possible retained. All the windows were built up and the chimneys and other domestic features removed. The building thus cleared was formed into a Hall of Honour.

The subject of the seven windows in the apse or Shrine is "The Warring Element in the Destiny of Man" rather than war, as in this form the nobler qualities and emotions evoked by war can be recorded without the possibility of appearing to glorify war itself. The form and dimensions of the apse rendered it desirable that the idea embodied in the subject scheme should culminate in the central window (No. 4), and the subject-matter therefore has been planned in three sections or window groups.

Windows Nos. 1 and 2 represent the beginnings of strife, tyranny and crime; of which, as a generally understood and accepted symbol, the slaying of Abel forms the subject of the main composition. Two small compositions at the base of these windows typify Faith (the Sacrifice of Isaac) and the beginnings of Order (Moses, the law-giver). The figures at the top of the windows represent the Days of Creation with the signs of the Zodiac under their feet.

Windows 6 and 7 on the wall opposite are based on Revelation, and symbolise the "Overthrow of Tyranny." Enthroned Ruthlessness is represented in window No. 7, Enslaved Mankind in No. 6; the Four Horsemen of the Apocalypse and the Angels of the Viols in both windows, the Rider of the White Horse, symbols of spiritual triumphs at the top of No. 6, his followers in the corresponding position in No. 7.

At the base of window 6, "The Souls under the Altar"—the cry for Revenge; at the base of No. 7, the souls guided upwards in peace.

Windows, 3, 4 and 5.—"Praise," the central window being a symbol of the Spirit praised. The Crucifixion in this window No. 4, typifies Triumph through Suffering and Self-sacrifice; the hands and feet are freed from the Cross, it is Resurrection, Ascension, not Death; the cross set amid figures of the Four Elements, representing the road by which triumph has been reached. At the foot of the cross Bellona dies against the knees of Peace, where East and West unite. At the top of the window the Eternal Spirit. Windows 3 and 5 represent Praise; man rededicating himself to Service; Shepherd, Reaper and Warrior, with Philosophy and Art, in No. 3; the craftsman with Science and Leadership in No. 5; these backed by emerald figures of Hope, Courage, Justice and Patience. At the top of both windows the Elders with outstretched arms uncrown before the Figure in the central window At the base of No. 3, Galgacus and Wallace, with modern defenders of freedom; in No. 5, Bruce and Alexander III. with other figures.

The Four South Windows in the Hall of Honour, form the complement of the four larger windows in the hall representing War "At the Front." "War as it manifested itself at home" is represented by the smaller windows, thereby making the entire series a complete presentation (within the technical limits set by lighting requirements) of the War as a whole.

The sculptured representations of the "Seven Planets" in the spandrils over the windows in the Scottish National War Memorial Shrine are, in subject intent, an extension of the subject matter employed in the windows below. The latter culminates (at the tops) in the "Days of Creation" and the "Angels of the Apocalypse"; and the sculptured medallions immediately above symbolise the Heavenly bodies, and more particularly, the influences which from earliest times, man has supposed the Sun, Moon, Mars, Mercury, Jupiter, Venus and Saturn, to exercise on his destiny.

Saint Michael is in many respects the noblest of all existent symbols. Compared with the Archangel Raphael engaged in kindly acts as Guardian Angel of all humanity, Michael is a judge; remote and austere: but his is an austerity that thrills rather than chills; and the remoteness only serves to add lofty radiance to his majesty. There is infinite tenderness in his might.

THE SEVENTH ANNUAL MEETING OF THE FRANCO-BRITISH UNION OF ARCHITECTS

BY H. P. CART DE LAFONTAINE.

The annual meeting of the Franco-British Union of Architects takes place in England and France alternately. Last year the British members were the hosts at Canterbury, and this year the meeting was in Paris, and our French committee arranged an excellent programme. The only pity was that so many of those who had intended to take part were prevented either (as in the case of the Vice-President elect, Mr. E. Guy Dawber, A.R.A.), through illness, or for other reasons.

However, the party which met in Paris included Sir Reginald Blomfield, R.A. (President), Messrs. P. Cart de Lafontaine (Secretary-General), Arthur J. Davis (Hon. Sec., British Section), Robert Atkinson, W. H. Ansell, L. de Soissons, P. D. Hepworth, A. N. Prentice, and one *invité*, Sir Theodore Chambers, K.B.E.

The first item on the programme was the reception of the visitors by the President and Council of the Société des Architectes Diplômés. M. Legros (vice-president and president elect of the Union) made a short speech of welcome, and, after the interchange of greetings, the party went on to the *Salon des Artistes Décorateurs*. Here we found much to admire, much which was frankly hideous, and a good deal which was of considerable interest. By general agreement the two best things in the exhibition were a delicate ensemble for an entrance door in grey and silver; stone, armour bright wrought-iron and glass by Monsieur Lalique, and an effective door in wrought-iron with an excellent bit of masonry design by Monsieur Marrast.

In the afternoon the two official meetings of the Bureau and the general meeting were held at the rooms of the S.A.D.G., when the formal business was dispatched with more than usual expedition as the two meetings were, so to speak, telescoped into one.

Monsieur Legros was unanimously elected president for the ensuing session. Mr. E. Guy Dawber, A.R.A., P.R.I.B.A., was likewise unanimously elected vice-president. In addition it was decided that a telegram should be sent him expressing the regrets of the members present at his inability to attend, with good wishes for a speedy restoration to health.

A discussion of some interest took place on the subject of international competitions. This followed a statement by Monsieur Defrasse, chairman of the special joint committee, which was appointed some time ago to consider the working of the existing regulations and to report on any desirable amendments, etc.

Two reports were presented. The view of the British section of the special committee (Sir J. W. Simpson, S. D. Adshead, H. V. Lanchester, and Arthur J. Davis, hon. sec.) was that until agreement had been reached as to the disciplinary measures to be taken to ensure that no member of a recognised French or British architectural society should take part in a "banned" international competition, no useful purpose could be served in considering amendments to the existing regulations themselves.

The French section of the committee were unable to accept this proposition because, in the *Code Guadet*, which is the accepted rule for professional conduct in France, there is no reference to international competitions. It would, therefore, be necessary first to secure the agreement of the various French societies, such as the Société Centrale, the S.A.D.G., and the Fédération des Architectes Français, to a revision of the Code.

Monsieur Defrasse suggested as a first step in this direction . . . a referendum should be taken to ascertain the views of French members of the Franco-British Union of Architects. If the result was favourable the matter could then be considered by the general body of French architects in due course.

After some further discussion it was agreed that the whole question should be referred back to the special committee for further consideration.

On the conclusion of the meeting members were carried off by their hosts to inspect two buildings in course of erection, and spent some time observing the various special methods of construction in use in France. These were very fully explained by MM. de St. Maurice and Bluysen, the architects of the two buildings we visited.

Afterwards our party was entertained to a welcome tea by Monsieur and Madame de Saint Maurice in their charming apartment, and members subsequently fixed up various appointments for the evening's entertainment.

On Tuesday an early start was made for Fontainebleau and the Chateau de Vaux. A really perfect day made the drive very agreeable, and M. d'Esparbes, the curator, who has a pretty wit, proved a most entertaining guide (assisted by Monsieur Bray, the *architecte en chef*) to the palace of Fontainebleau.

About midday our party adjourned to the Savoy Hotel for the official lunch of the Union, at which we were the guests of the French committee. Faithful to our traditions there were no set speeches or formal toasts, but at the conclusion of the meal M. Legros proposed the health of the British visitors, coupled with the name of Sir Reginald Blomfield, who replied with a few words of thanks to our hosts for their hospitality and the excellent programme arranged for our entertainment.

From Fontainebleau a short run brought us to Vaux le Vicomte, a fine example of the work of Le Vau, standing in a great formal garden and surrounded by a moat.

Here we were received by Monsieur Sommier and his charming wife, and assembled in the great elliptical hall which is the main feature of the garden front. Monsieur Sommier gave us a brief history of the building, which is probably too well known to need repetition, after which we spent a pleasant hour visiting the gardens.

Wednesday was a day of official functions: first we visited the Elysée, in company with members of the *Bureau* of the Société des Architectes Diplômés. Monsieur Legros, president of that Society and of the Union, presented Sir Reginald Blomfield to Monsieur Doumergue, and Sir Reginald introduced the British architects, while Monsieur Legros performed a similar office for his French colleagues.

Monsieur Doumergue, addressing the British members, said it gave him particular pleasure to welcome them as architects of the *entente cordiale* and representatives of the great nation he had recently visited. He had been particularly impressed, during his visit to England, with the beauty of the countryside and the charm of the cottages and houses, in which comfort and convenience were combined with architectural charm.

A brief visit to the State apartments, the Salle du Conseil and the Ballroom terminated with the inevitable photograph, taken on the terrace, and followed later by an ambushed assault by the Press photographers on the departure of the visitors.

During the afternoon, members were entertained to tea by the *Accueil Franco Britannique*, at the house of M. and Mme. Bouwens de Boijen. Among those present at this function were the Marchioness of Crewe, the Comte de Fleury, Mr. J. R. Cahill, of the British Embassy, and Mrs. Cahill, the Baronne de Laumont, and the Baronne de La Grange. A number of old French songs were sung by Madame Margerite Herleroy, of the Opera.

The day concluded with the great banquet and celebrating the fiftieth anniversary of the foundation of the Société des Architectes Diplômes, which took place at the Union Interallié: the event was also remarkable for a thunderstorm of more than usual severity. A wit of our party congratulated our hosts on providing not only such munificent hospitality, but also a celestial Royal salute and a fine display of fireworks. Judging from the many friends we met, the banquet must have been attended by nearly every architect of note in France; some, indeed, having come from Alsace and other distant provincial centres to be present. Among the official guests were Monsieur Herriot, who presided; His Excellency the Marquis of Crewe; the Roumanian Ambassador; Monsieur Roussel le Roy, representing the Minister for Foreign Affairs; Monsieur Paul Leon; *Directeur des Beaux Arts*, etc.

At the conclusion of the banquet, Monsieur Legros gave the toasts of the President of the French Republic and of His Majesty King George and the Royal Family of Great Britain.

He then rose to propose the toast of the S.A.D.G., and referred in some detail to its many activities, not least among which was represented by the Franco-British Union of Architects. In the name of the Society, he extended to His Excellency the Ambassador of Great Britain, and especially to Sir Reginald Blomfield, the retiring president, Cart de Lafontaine, the energetic secretary-general, and those members who were with them that evening, a very cordial welcome. M. Legros went on to refer to the generous assistance given by the U.S.A. members of their Society, to their appreciation of the presence of the Roumanian Ambassador, to the action which had been taken to protect the title of "architect," which would, he hoped, shortly be sanctioned by the Chamber of Deputies, to the cordial relations which existed between their members and the builders, and various other matters of local interest.

Monsieur Lacoste (Belgium) briefly returned thanks on behalf of the visitors, and the proceedings concluded by a fine speech by Monsieur Herriot, Minister for Public Instruction and Fine Arts.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

Liverpool Cenotaph.

Sir,—A letter appeared in the *Liverpool Daily Post and Mercury* on Monday last, over the signature of Mr. Maurice E. Webb, in which he refers to the endeavour, as he calls it, to upset the award of the assessor in the Cenotaph competition. "Having failed in this," he says "there is now an agitation to prevent the Cenotaph being erected at all." On what authority does Mr. Webb make these statements? No architect to my knowledge has tried to upset the award; indeed it has been stated again and again that those who are doubtful as to the suitability of the site are desirous of seeing the Cenotaph erected, but not in front of St. George's Hall. The Liverpool architects made that quite clear in their memorial to the Lord Mayor. All they ask for is that a full-size model shall be erected on the site and allowed to remain for a month before the work is proceeded with. Surely Mr. Webb does not object to such caution. He must realise that if a mistake is made it will be disastrous to St. George's Hall, the Cenotaph, the designer, the assessor, and the committee. Then why not experiment with a model? Mr. Webb can rest assured that if St. George's Hall is saved the architects of Liverpool, and indeed Great Britain, will whole-heartedly support the award and rejoice in the erection of Professor Budden's design on a suitable site.

Liverpool. Taliesin Rees.

THE L.C.C. HOUSING WORK AT BECONTREE.

In our last issue we published some interesting figures relating to recent housing progress in the country, and quoted Mr. Neville Chamberlain's remarks in the House of Commons, showing that in the year 1925 the total number of houses built was 137,000; in 1926, 173,000; and in 1927 as many as 217,000. [See also article on p. 101.] As he said, this truly prodigious effort could not be paralleled in any other country in the world, and is a tribute to the efforts and enthusiasm of the housing authorities, as well as their architects and builders. All municipal bodies have contributed to this result, and a review of the housing work of the L.C.C. since 1919 shows that their contribution towards the alleviation of the shortage of houses within the County of London has been most substantial and satisfactory. Since 1919, new accommodation in cottages alone has been provided for over 100,000 persons, and we believe that this number will be increased by the end of the present year by a further 20,000. Of the ten cottage estates, covering a total area of 4,300 acres, development of which has been undertaken, five are practically completed, and work on the remainder is rapidly proceeding. As a matter of fact, about 120 houses are being completed and occupied every week. On these cottage estates alone, the Council has, since the war, erected over 17,000 cottages and flats, or some five times as many as were erected before, and this statement does not take into consideration what has been done for the re-housing of persons displaced by the clearance and abolition of unhealthy areas. The chief work of the Council has been carried out at Becontree, situated near Barking, Essex, where over half of the completed dwellings have been erected. The extent of the Council's operations on this estate may thus be realised, and this week we give some illustrations showing the character of the work, as well as a plan from which can be gathered the determined manner in which the problem has been handled, but owing to the conditions of financial stringencies in 1921, the original proposals for the development of the estate by the provision of 24,000 houses, with a housing capacity of about 120,000 persons, all to be completed in five years, has not been realised within the period. Results indicate the practical way in which the Council set about the task, and the skill and capacity of those engaged in the design, supervision and erection of the buildings. Some 10,000 houses are actually completed, and over 4,000 are in course of erection.

Anyone acquainted with the site before it was dealt with will appreciate the fact that the erection of the buildings is only part of the work of development which has taken place. When the Council acquired the site, the land, which was very flat and uninteresting, and had few natural amenities to commend it, was used mainly as market gardens, and the few existing roads were of an indifferent character. The preliminary work in connection with the preparation of the lay-out necessitated a great deal of negotiations with various authorities controlling different interests—the Essex County Council, and local district councils, for instance, who had to be consulted as to education facilities, commercial developments, erection of public buildings, sewage disposal, and other services relating to local government or connected with the erection of a new town, measuring, as it does, about 2½ miles from north to south, and 2 miles from east to west. A visit to the estate to-day by anyone who remembers it as it was in 1919 would be a revelation. On the northern and south-eastern portions of the estate are thousands of well-planned houses laid out on garden city lines, the underlying aim in the erection of which has been the avoidance of monotony, not only in the design of the houses but in the treatment of the roads, bearing in mind, of course, the importance of economy. Houses are of different types and many blocks are set back to break the continuous line which has characterised much of the building work laid out before the war, while the planting of trees and private hedges has added to the pleasant appearance of the roads. Upwards of 70 miles of new roads have been constructed, some of which are 100 ft. in width, and certain of these form part of the Ministry of Transport road-scheme for the eastern area of London. Twenty miles of temporary railway track were laid down to facilitate the transport of building materials. A complete jetty, to be connected to the estate by an approach road, has been built at the side of the Thames for water-borne materials. Shopping centres have been created by the Council and by private enterprise, while new omnibus services have been started, and a new railway station provided, with the intention to provide additional railway facilities in the near future. Open belts of land have been retained on the west and south sides of the estate which are kept free of houses, and the reservation of some 150 acres in the centre of the estate for a park. One of the difficulties with which the Council had to contend from the very start of the development of the estate was the shortage of skilled craftsmen in the building industry. For this reason, alternative methods of house construction were not only considered, but thousands of houses have been built in various forms of concrete construction. Coloured rough cast has also been used with good effect on some of the houses to relieve the monotony generally associated with rows of concrete dwellings. Another means of coping with the shortage of skilled labour led to the importation and building of nineteen experimental houses of Scandinavian construction, while at the same time the Council erected an experimental block of four timber-framed houses, designed by Mr. G. Topham Forrest, the architect to the Council, the type being evolved as a result of his visit to America on behalf of the Council in 1924. A number of houses of this type have been, and are being, built at Becontree and other estates. It may be mentioned, in conclusion, that six sections of the estate, comprising nearly 8,000 houses, are completed, while work on four more sections is well advanced, 2,000 houses being occupied, and 4,300 now in course of erection.

The contractors for this estate are Messrs. C. J. Wills & Sons, Ltd., public works contractors, and the administration of the contract on behalf of the L.C.C. is in the hands of Sir George Humphreys, K.B.E., the Administrator of the Council's Housing Development Schemes. Amongst the sub-contractors are:—Slating, Roberts, Adlard & Co., Ltd.; plastering, W. J. Wheeler & Sons. Mr. G. Topham Forrest, F.R.S.E., F.R.I.B.A., the Architect to the Council, is responsible for the lay-out plans and for the building plans.

Lancaster Royal Grammar School.

The proposed new buildings on the Plantation Site have a frontage to East-road of 330 ft., and are planned to accommodate 305 students, principally on two floors. The ground floor contains the entrance hall, assembly hall, No. 4 classrooms, physics laboratory, chemical laboratory, preparation room and store, masters' room, and cloakroom and lavatory. On the first floor are No. 6 classrooms, art room and store, memorial library, book store and caretaker, and gallery to hall. In the basement are the heating chamber and conveniences, etc. The style of architecture adopted is of the Tudor period, to be in keeping with the existing school, the walls being faced with broken coursed square random rubble, and the roof slated with Coniston green slates. The architect is Mr. Stephen Wilkinson, A.I.C., F.R.I.B.A., architect to the Lancashire County Council. The work has commenced, the contractors being Messrs. Thompson and Morris, of Lancaster.

Scottish National War Memorial.

We publish this week a number of illustrations of the interior of this memorial, the exterior views of which we showed last week. A further article describing the memorial will be found on page 84.

The Leas Cliff Hall, Folkestone.

We give illustrations of this pavilion which was opened on Wednesday by Prince Henry. A description of the work will be found on page 96.

Smoke Abatement.

The Public Health (Smoke Abatement) Act, 1926, which has now come into force, extends and brings up to date the provisions relating to smoke nuisances contained in the Public Health, 1875, and the Public Health (London) Act, 1891.

The sections of those Acts which make it an offence to emit "black smoke" in such quantity as to be a nuisance have been amended by including smoke which is not "black smoke." The definition of "smoke" will now include soot, ash, grit, and gritty particles. In proceedings for sending out smoke other than black smoke, however, it will be a defence to show that the best practicable means have been used to prevent the nuisance, "having regard to the cost and to local conditions and circumstances." The penalties for causing smoke nuisances have been greatly increased. The overriding powers of the Minister of Health will also cause local authorities to see that their arrangements with regard to the abatement of smoke nuisances are in working order and that their powers to make by-laws on this subject are carried out. At the request of the Minister, county councils and local authorities must furnish to him a report of their proceedings as to the abatement of smoke nuisances. A ship habitually used as a sea-going ship escapes the provisions of the Act, which, moreover, does not apply to Scotland or Northern Ireland.

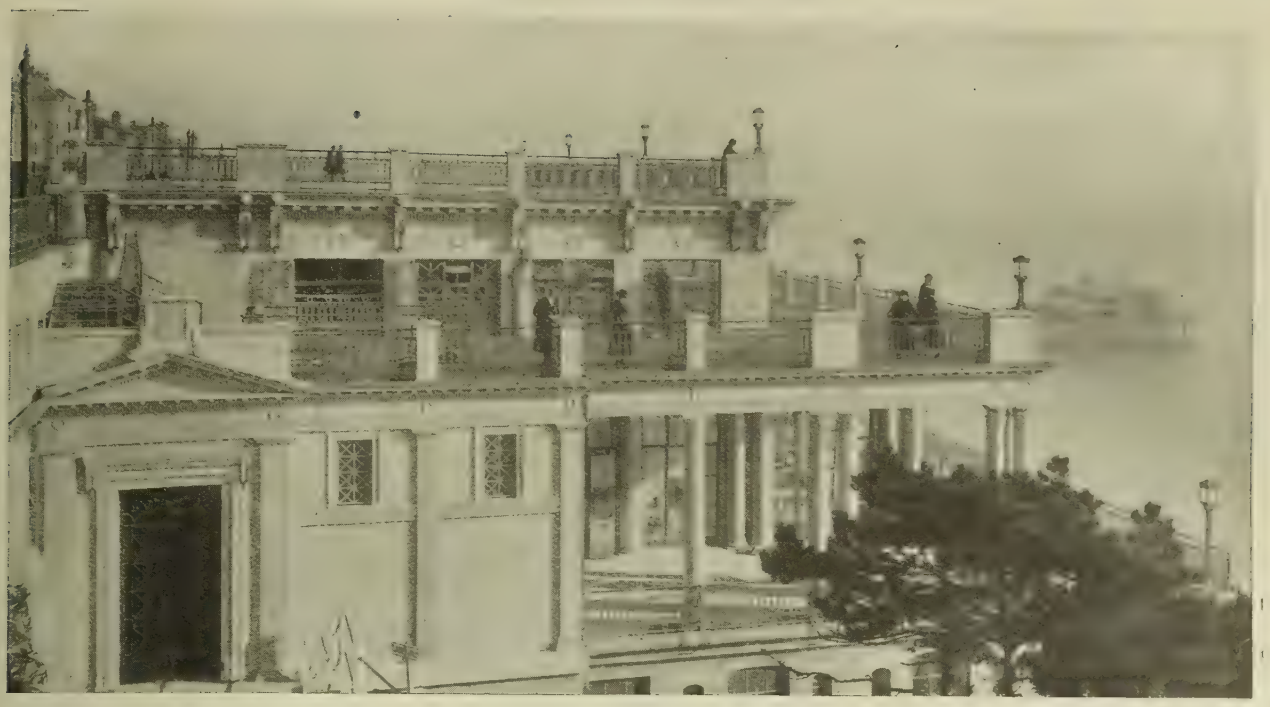

Fig. 1.—End View.

LEAS CLIFF HALL, FOLKESTONE

This recent and important addition to the already numerous amenities of Folkestone is constructed on the Leas, and comprises, as well as a large concert hall and band pavilion, a promenade, balconies, shelters, tea-rooms, and other conveniences. The structural material is almost wholly reinforced concrete, the consulting engineers for which were Messrs. Considere Constructions, Ltd., of Westminster, S.W. 1.

The external facing material is white faience work, and the architectural treatment it has received is very suitable indeed to its position and environment. This may be seen from Fig. 1, which gives an external view of the work. The principal idea in designing this work was to have as many balconies as possible, so that the public could hear music and at the same time be out of doors and enjoy unrivalled views of the English Channel, shipping, French coast, etc.

The two balconies, as will be seen, are both covered for wet weather, and the main hall windows open entirely so that the hall can be thrown completely open. The external windows are of metal, and these have been treated with a zinc spray finish to prevent rusting, which is an important question at seaside places.

The main hall, which has accommodation for 1,500 people, is provided with a dance-hall. Synchronising clocks have been fitted throughout, and telephone communication is installed between the various rooms.

Large subscription rooms, for reading, writing, etc., together with a silence room, are provided on the middle floor, while on the mezzanine floor are retiring rooms for artists, bandsmen, etc. The central heating is low pressure with oil-fired boilers. Heavy crude oil is employed, and this is pumped down from the road above.

The principal feature structurally is the main cantilevered balcony, with a clear projection of 17 ft., which extends the whole length of the building. Beneath this is a smaller balcony which traverses a portion of the façade, Fig. 2.

Fig. 3 shows a typical transverse section through the building. This illustration shows clearly the constructional arrange-

Fig. 2—Front View.

Leas Cliff Hall, Folkestone. Mr. John L. Seaton Dahl, F.R.I.B.A., Architect.

ments and the cantilever balconies referred to.

It was obviously desirable, so far as possible, to keep the dead weight of the front portion of the structure as small as possible. Several means were adopted to this end, one being the use of hollow or trough flooring of reinforced concrete for the main balcony and adjacent pavilion. These floors, although spanning about 20 ft. between beams, were of minimum dead weight, and possess excellent sound-resisting qualities. The underside of the floors were provided in all cases with plaster ceilings formed on expanded metal, the latter being attached to the rib soffits in the usual manner.

The building has taken two years to complete, and the cost, including furniture, amounts to about £30,000. The opening ceremony was performed by H.R.H. Prince Henry on July 13. The architect for the work is Mr. John L. Seaton Dahl, F.R.I.B.A., and the general contractors Messrs. Godden & Son, of Ashford, Kent.

UNIVERSITY OF LIVERPOOL

The conferment of degrees awarded by the University of Liverpool took place on Saturday afternoon in St George's Hall, in the presence of a large attendance of members of the University congregation and of the general public, and under the chairmanship of the Chancellor, Lord Derby. The Degree of Master of Arts (*honoris causa*) was conferred upon Alexandre Theodorer, Horace Fleming, and Robert Thomas Jones; that of Master of Sciences (*honoris causa*) upon Charles Panzetta Chatwin; that of Masters of Engineering (*honoris causa*) upon Sterry Paines Fillman; and the Degree of Master of Architecture (*honoris causa*) upon Robert Atkinson, Director of Education, the Architectural Association.

Mr. Atkinson was presented to the Chancellor (Lord Derby) in the following terms :—

"Robert Atkinson is a man who practises what he preaches; he teaches architecture and is himself an architect. The school of the Architectural Association over which he presides has had a powerful influence both here and in the Scandinavian countries : to them he has directed the attention of English students, from them he has attracted many visitors to examine our own architecture. His work is studied with admiring criticism and critical admiration by representatives of other schools. In especial his rebuilding of a section of O'Connell-street in Dublin has arrested their regard and won their praise. Some architects, the experts say, are free and romantic, and some severe and classical; the man in the street knows them as good or bad, and he has no doubt where to place the artist whom we desire to honour.

During the course of the day, Mr. H. Gordon Selfridge opened the annual exhibition of architectural drawings by the Liverpool School of Architecture at the Walker Art Gallery. The Lord Mayor, Mr. F. C. Bowring, presided.

Mr. Gordon Selfridge, in opening the exhibition, said architecture, to his mind, was the most beautiful of all arts, because it had such great utilitarian value as well as beauty.

That a building must be permanent, and must be looked upon by so many people, implied an obligation upon the owner, and, through him, as his adviser, the architect. He would like to see the architects of this country decline to accept commissions for any edifice, structure, or building which, in their knowledge of the laws of architecture, was inconsistent with those laws. For this purpose architects could band themselves into a strong committee, as it were, which would be recognised by everyone in the country. Just as a man who was ill placed himself in the hands of his doctor, so the client of a skilful architect should place himself in the hands of the latter. A building could be made really beautiful at only a comparatively small additional cost.

The following are the July examination lists at the school of architecture :—

Faculty of Arts.

Degree of B.Arch.

Fifth Examination (exempted from final, R.I.B.A.) : Honours in Architectural Design : Class I.—Heal, R. G. Class II.—Davies, E. F.; Mackenzie, K. R. Honours in Architectural Construction : Class II.—Hall, G. A. V.; Ridge, G. A. Ordinary Degree.—Aspland, A.

Fourth Examination.—Davies, E. F.; Docking, S. J.; Heal, R. G.; McKenzie, K. R.; Powell, H. H.

Third Examination (exempted from Intermediate, R.I.B.A.).—Bodhiprasad, N.; Eden, W. A.; Freeman, P. G.; Wilkinson, H. H.; Williams, R. A.; Wright, L.

Second Examination.—Archer, Hilary; Fairclough, A. B. R.; Harper, D. R.; Haywood, Nancie B.; Holford, W. G.; Hutton, C. W.; Marks, Joyce; Meldon, A. G. P.; Nelson, J. O.; Stephenson, G.

First Examination.—Baird, Margaret; Best, A. M.; Gardner-Medwin, R. J.; Goodacre, N. W.; Lunn, N. S.; Miles, Marjorie; Mitchell, N. B.; Mitchell, T. N.; Roberts, R. E.; Rossell, R. E.; Thornely, Ethel M.; Winston, D.; Worsnip, J. V.

Diploma in Architecture.

Fifth Examination : Distinction in Architectural Design.—Lewis, O. G.; Stout, H. B. Ordinary Diploma.—Cotton, A. C.; Dobie, W. H. G.; Haynes, T. C.; Metcalfe, J. G.; Sumner, B. A.

Fourth Examination.—Cotton, A. C.; Dobie, W. H. G.; Haynes, T. C.; Hughes, J. L.; MacGillivray, I. D.; Parry, H. T.; Stout, H. B.

Third Examination.—Ashworth, A. T.; Brown, C. S.; Burrows, A. C.; Cowin, J. N.; Crabtree, W.; Hearnden, E. G.; Holt, A. N.; Kelly, S. W.; Knowles, H. J.; Lightfoot, B. St. C.; Murray, E.; Plant, W. G.; Poulton, D.; Segar-Owen, G. J. S.

Second Examination.—Archibald, R. M.; Fairless, C. L.; Furbur, E. R.; Griffith, R. G.; Hughes, J.; Inglis, J. B.; Kenyon, G.; Morter, P. S. P.; O'Flynn, E. P.; Owen, H.; Woods, H. J.; Wright, J. H.

First Examination.—Banister, H.; Bevan, H. L.; Frankenthal, J. J.; Jackson, R. J. L.; Kelly, R. H.; Mukhtar, A.; Peace, F. N.; Richardson, Rachel J.; Rowley, C. J.; Shennan, W. M.; Sheridan, J. G. R.; Stirrup, G.; Weerasinghe, O. F.

The following is the list of prizes awarded in the School of Architecture.

Holt Travelling Scholarship.—P. G. Freeman (third year student).

Anthony Minoprio Prize.—P. G. Freeman (third year student).

Holland and Hannen and Cubitt's Prizes for Working Drawings.—1st prize, W. G. Plant (third year student); 2nd prize, G. A. V. Hall (fifth year student).

John Rankin Prizes.—J. B. Maxwell (fifth year student); A. Owen (fourth year student).

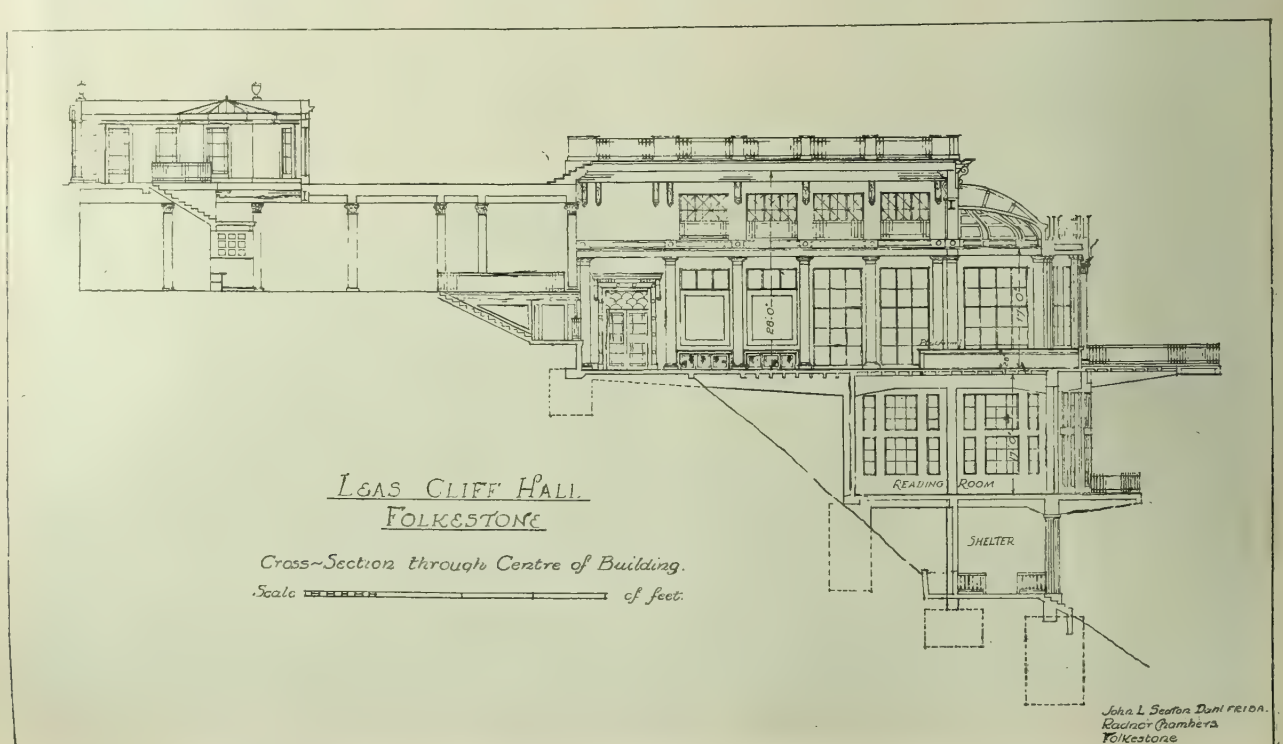

Fig. 3.—**Leas Cliff Hall, Folkestone.** Mr. John L. Seaton Dahl, F.R.I.B.A., Architect.

THE REGISTRATION BILL IN PARLIAMENT

When the Select Committee of the House of Commons presided over by Sir Clement Kinloch Cooke resumed their examination of the Architects Registration Bill on Tuesday, July 5, evidence was given by Mr. A. V. Alexander, M.P., Secretary of the Parliamentary Committee of the Co-operative Congress.

Witness submitted the following precis of evidence :—

This evidence is submitted on behalf of the Parliamentary Committee of the Co-operative Congress, which speaks for the whole of the Co-operative Movement of Great Britain and Ireland. The Co-operative Movement is composed of over 5,300,000 members, it engages in all classes of business, and the turnover is approximately £200,000,000 per annual retail and £100,000,000 per annum wholesale and productive.

The extent of the business of the Co-operative Movement and its steady growth necessitates a great amount of architectural work being done, and it is necessary in dealing with a Bill in connection with architects to ensure that nothing may transpire as a result of the Bill which would interfere in a prejudicial manner with that department of co-operative activity.

It should be explained that each co-operative society in the country is completely autonomous in the management of its own affairs, and there is, therefore, no compulsion placed upon any society to employ co-operative architects. A large number of the societies do, however, obtain their architectural services from the architects' departments of the Co-operative Wholesale Society of England and Wales and the Scottish Co-operative Wholesale Society. The principal service rendered by these departments is, of course, the architectural work in connection with co-operative business premises—shops, bakeries, warehouses, dairies, factories, and, in many cases, meeting halls. In addition to the architectural work of the co-operative wholesale societies a small number of local societies have an architects' department of their own.

In the view of the Parliamentary Committee of the Co-operative Congress it is essential that these activities should be safeguarded by including in any enactment a clear provision which will cover the right of a corporate body to carry on the business of an architect, provided it employs registered architects. I would point out that this is not a new principle in legislation, and a precedent may be found in the Poisons and Pharmacy Act of 1908. It is submitted to the Select Committee, therefore, that a new clause should be added to the Bill.

The Bill under consideration sets up a Council, with statutory authority to maintain a Register of Architects and the power to set up an Admission Committee and to prescribe qualifications for registration. It is submitted that it is essential that adequate representation should be given to working-class movements on the Board of Architectural Education, which will advise the above-named Council, and it is suggested that the first schedule should be amended by providing for representatives to be appointed by such bodies as the Union of Educational Institutions, the Workers' Educational Association, and the Central Education Committee of the Co-operative Union.

The Chairman : I see from your precis of evidence that you suggest a new clause somewhat on the lines of the Poisons and Pharmacy Act. You seem to have some doubt as to whether or not this Bill will mean that the architects' profession will be a close corporation?—Yes.

The Chairman : That, I think, we have clearly shown will not be the case. If we can show you that I take it you have no objection to the Bill? You think there might be a grave danger that the avenue to professional architecture will be made more difficult? If we can show to you that the Bill will not make it more difficult that will meet your case?—Especially if you provide the safeguards we desire.

The Chairman : Of course.

Capt. Wallace : I should like to ask you a question, Mr. Chairman. You said this Bill will not make architecture a close corporation. Is not that rather begging the whole question we are here to decide?

The Chairman : I will not say "clearly shown." I think I stated in my speech when I brought in the Bill that it was not the intention to make the architectural profession a close corporation.

Sir Murdoch Macdonald : What the fact is, is another matter?

The Chairman : That is so.

Capt. Wallace (to witness) : Have you taken legal advice that under the Bill it would be impossible for a corporate body to carry on its profession?—It is difficult to answer that exactly. What we have to bear in mind is our experience in connection with other professions. If the real intention of the promoters of the Bill is not to make a rigid close corporation but only to endeavour by registration to raise the status of architects what we submit is that if we undertake in the future to employ nothing but registered architects we shall feel more secure if we have a clause in the Bill.

Sir M. Macdonald : What do you mean in this sense by "close corporation"?—I am not a lawyer to give definitions nor even an eminent engineer like yourself, but we look at it from this point of view : that a professional occupation which has got statutory authority to control itself in a certain way so as to prevent open access to it is a close corporation. While the Bill as at present framed does not meet that definition of mine it might meet it in the next stage.

Sir M. Macdonald : Is not a close corporation a body whose members alone can statutorily claim fees?—Probably that would be a very good legal definition. What my committee fear is the second stage of progress unless we had reasonable safeguards. I am convinced in my own mind that architects would not, in 10 or 20 years' time, be satisfied with the present position.

Sir M. Macdonald : Do you object to this close corporation?—It all depends whether the admission to that body is adequate. I cannot see there is any fundamental objection to that condition provided access to the corporation is reasonably open. We do not want to do anything to lower the standard of the profession or prevent them from attaining a reasonable standard. All we wish to secure is that reasonable access shall be maintained. The advice of my solicitor is that if we secure the amendments submitted our position would be very much safeguarded.

Major Barnes was then re-examined.

The Chairman : You have read, I think, the evidence given to the committee, and we are going to ask you certain questions. We have had many witnesses and some of them, including Sir E. Turton, insisted on the retention of the proposed amendment to clause 20, which, as you know, exempts persons employed under a local authority. Do you think the retention of that amendment is necessary?

Witness : I have had an opportunity of looking at my answers when I was before the committee last, and I gather I was under a misapprehension as to the real effect of the amendment. Looking at it as I now see it there appears to me to be nothing in it that we can object to, because the effect of the amendment is to exempt local authorities from all the provisions of the Bill with the exception of that relating to titles. Reading Sir E. Turton's evidence and the precis prepared by the County Councils Association and other evidence they make it perfectly clear that they have no desire to use the term "registered architect" unless they are on the register. Therefore, speaking on behalf of the R.I.B.A., we are perfectly agreeable that the amendment proposed by the County Councils Association should be accepted.

The Chairman : Now about clause 5, subsection 1 (c). The Institution of Municipal and County Engineers and the Institute of Builders have suggested that an amendment should be made whereby men of mature years with the proper qualifications may have an opportunity of getting on to the register and an amendment was suggested.

Witness : We have considered that amendment and we are willing to accept it.

The Chairman then mentioned that certain witnesses had urged the desirability of defining in the Bill the expression of "bona-fide" and also of defining what is architecture.

Major Barnes said that no body had found a means of defining "bona-fides." It appeared to the promoters that it was a term which it would be impossible to define in the Bill. The term was used in a great many connections, and it was considered in relation to every connection in which it was used. They thought the only course to be followed was to construe it as it would be by the Admissions Committee, which was a completely representative body, and if their decision was questioned, then, of course, it would go before the Courts.

The Chairman : It has been suggested that the Council to be set up should be an independent body. Have you any objection to that?—Yes, that is a matter with which I dealt fully. We would very strongly ask the committee to take into the fullest account first of all precedent and, secondly, the facts of the situation. As to precedent, we have a very strong one in that of the Law Society and also the Royal College of Veterinary Surgeons. In both these cases, when registration was applied for, both these bodies occupied a dominating position and Parliament entrusted them with a register. On the facts, this committee has had an opportunity of discovering the nature of the other bodies in the country who can legitimately be asked to be associated with the Royal Institute on the General Architectural Council, and we submit that no case has been made that there exists at the present time any body with any claim of the least substance in it to be associated with the Royal Institute of British Architects. It is the only body to which the great responsibility of maintaining this register can be entrusted. It has considerable history, great traditions, and has discharged its responsibilities with honour and satisfaction. We feel that to impose upon it an association such as has been suggested would not be to treat the Royal Institute with the consideration to which it is entitled.

In reply to another question, Major Barnes said that the suggestion that the Institute of Builders should come on the General Council of architectural education was not justified by their own actions in the matter of education. They had set up what they called a system of building education, and they carried that out without seeking or offering any representation on their system to the Royal Institute. They had shown by that action that they thought the education of builders could be carried on in that way, and the Royal Institute did not disagree, but it did not lie in the mouth of the builders to come there and claim that they should be members of the General Architectural Council. The promoters had not had the slightest intimation from the Institute of Builders that they felt any dissatisfaction at all with their position on the board. The promoters were willing to be helpful, and they did not feel any resentment because the builders had not brought them into their system.

The Chairman then asked witness if the

promoters were prepared to accept the examinations of the surveyors for the purposes of the Bill.

Witness said he gathered that the two bodies concerned had not at the moment developed an examination system, and it would be quite open to both these bodies under the Bill when they developed their examinations to submit them to the Board of Architectural Education.

The Chairman : It was suggested that civil engineers might be prejudiced by the Bill

Major Barnes : I do not think there is much ground for apprehension. The Institution of Civil Engineers is an extraordinarily powerful body, and persons who employ them on the sort of work they do are very important persons. The work which is carried out is that of great public utility societies or by local authorities, and these are bodies who are not likely to draw false inferences from any legislation passed.

Replying to another question witness said the promoters agreed that the Institution of Civil Engineers should be placed on the same footing as the local authorities in the matter of exemption.

Witness was then asked several questions relating to architectural education. In reply to these he stated that one of the features of the architectural profession was that the young man got his chance by competition in quality. But the Institute set its face like a rock against any competition which was based on remuneration, that was to say, putting one architect against another in the matter of his fees. The Royal Institute thought that architects were better not engaged in auctioneering or house agent's business where questions of remuneration might arise. The Royal Institute felt strongly that the association of the architect and the builder was one which was open to gross irregularities.

The Chairman : Sir Charles Morgan suggested that the promoters could obtain their aim without legislation.

Witness : The short answer to that is that if we thought that we should not be here.

Sir M. Macdonald : The Institution of Civil Engineers have successfully attained their object without legislation.

Witness. I do not think so.

The Chairman : Now I come to a rather controversial point. It has been suggested there should be some definition of architecture in the Bill. Would it be possible to put a definition into the Bill?

Major Barnes : It would be quite possible to put in a definition, but it would be one that would create more difficulties than it would remove. You are dealing with a profession that fringes away into a sort of no-man's-land between architecture and engineering, and you cannot draw the boundary line. What does really happen now is that everybody has a sufficient idea of what an architect, engineer or builder is, and they go to one. To attempt to define a profession in this particular Act would be to attempt to do what has never been done in any other Act.

The Chairman : Professor Pite seemed to think that the poor boy was not sufficiently considered or thought of in the Bill.

Major Barnes said he would be surprised if there was any profession in Great Britain to which access was so open as the architectural profession. An examination had been made of the forms of the last 115 boys in Great Britain actually admitted as probationers of the R.I.B.A. and now preparing for the Intermediate Examination. Out of the 115, 29 were pupils at "Recognised Schools"; Elementary schools, 4; private schools, 1; secondary schools, 10; public schools, 14; total, 29.

These 29 represented the class which could afford relatively high fees, but even here there were four elementary school boys out of 29 and only 14 public school boys. Out of the remaining 86 from the 115 cases examined, five were educated at private schools, eight were educated at public schools. 17 were educated at secondary schools, while 56 began their education at council elementary schools. Taking the two classes together, 60, or more than half of the 115, were elementary school boys.

The committee then adjourned.

ROYAL INSTITUTE OF BRITISH ARCHITECTS

We take the following from the Notes from the Minutes of the Council Meeting for June 20, 1927 :—

The Statutory Control and Development of Rural England.—A comprehensive report on this subject, prepared by the Town-Planning and Housing Committee, was approved and forwarded to the Council for the Preservation of Rural England.

International Congresses.—In view of the agreement reached in Paris at a meeting of the Comité Central des Congrès Internationaux des Architectes, held on February 21, 1927, whereby it was unanimously agreed to dissolve the temporary organisation and revive the Comité Permanent International des Architectes as this existed in 1914, the Council approved the reconstitution of the British Section of the C.P.I.A. as previously existing, and agreed to nominate delegates to represent the R.I.B.A. at the forthcoming International Congress to be held at The Hague from August 28 to September 4, 1927.

The Preservation of Ancient Cottages.—Mr. O. P. Milne, F.R.I.B.A., was appointed to represent the R.I.B.A. on the Advisory Committee set up by the Royal Society of Arts to administer the scheme for the "Preservation of Ancient Cottages."

The British Engineering Standards Association.—It was agreed to renew the annual grant of £100 to the British Engineering Standards Association for the year 1927.

The Franco-British Union of Architects.—It was agreed to increase the annual grant to the Franco-British Union of Architects to £50 for the year 1927.

The University of Sheffield Court of Governors.—Mr. Robert Atkinson, F.R.I.B.A., was reappointed as the R.I.B.A. representative on the Court of Governors of Sheffield University for a further period of three years.

The Empire Forestry Association Governing Council.—Mr. H. D. Searles-Wood, F.R.I.B.A., was reappointed as the R.I.B.A. representative on the Governing Council of the Empire Forestry Association.

The National Association for the Prevention of Tuberculosis.—Mr. Sidney Kitson, F.R.I.B.A., was appointed as the R.I.B.A. delegate at the Thirteenth Annual Conference of the National Association for the Prevention of Tuberculosis held in London on June 30 and July 1 and 2.

The British Waterworks Association: Standing Committee on Water Regulations.—Mr. H. D. Searles-Wood, F.R.I.B.A., and Lt.-Col. P. A. Hopkins, L.R.I.B.A., were reappointed as the R.I.B.A. representatives on the Standing Committee on Water Regulations of the British Waterworks Association.

The Fellowship.—The Council, by a unanimous vote, elected the following architects to the Fellowship, under the powers defined in the Supplemental Charter of 1925 :—*Great Britain:* J. L. Ball (Birmingham), J. B. Nicol (Aberdeen), F. C. Mears (Edinburgh), M. H. Baillie Scott (London), Adrian Gilbert Scott (London). *Overseas:* A. S. Hook (President of the Institute of Architects of New South Wales), B. J. Waterhouse (Vice-President of the Institute of Architects of New South Wales), John Perry (President of the Cape Institute of Architects).

Studentship.—The following were elected Students of the R.I.B.A. :—Arthur Aspland (University of Liverpool), Herbert Bartholomew Evans (University of Liverpool), George Albert Victor Hall (University of Liverpool), John Henry Inglis Isherwood (University of Liverpool), Charles Edward Moore (University of Liverpool), William John Arthur Osburn (Architectural Association), Gwilym Arthur Ridge (University of Liverpool), Ralph Maynard Smith (Architectural Association), Bevis Sumner (University of Liverpool), David Isaac Taylor (Bombay School of Art).

THE ARCHITECTURE CLUB

The President, Mr. J. C. Squire, M.A., Hon. A.R.I.B.A., took the chair at the twelfth dinner of the Architecture Club, held at the Savoy Hotel, W.C., on Tuesday. Amongst those present were the Rt. Hon. Neville Chamberlain (Minister of Health), the Prince George of Russia, Sir Herbert Morgan, Mr. Walter Tapper, Sir Laurence Weaver, Professor S. D. Adshead, Messrs. R. Steuart Bowers, H. Chalton Bradshaw, Lt.-Col. H. Cart de Lafontaine, A. J. Davis, Edmund Dulac, John Gloag, Darcy Braddell, Oliver Hill, Ian MacAlister, Oswald P. Milne, G. L. Pepler, S. C. Ramsey, Professor C. H. Reilly, and J. H. Elder-Duncan the secretary.

The loyal toast having been honoured, the President opened a discussion on "Modern Suburban Architecture." He felt, he said, that he must assure his audience that they were not there to drink the health of suburban architecture because they liked it so much, but because they realised that there was nothing so much in need of help. He had been told by an architect friend that over 90 per cent. of buildings were put up without any help from an architect. All were convinced, he felt, that it was better that an architect should be coupled with a building than not, since buildings concerned not only those who lived in them, but those who had to pass them. We could not say with truth that we had made much impression on our time until we had brought about a change in the houses which had sprung up around our towns. One great problem we had to face was how to get at the people who put up the present mean little houses. As one went out of London, one found that every small village had, as it were, a scarlet fever of small villages and houses around it. He felt something ought to be done. In America builders had access to a kind of stock-book of plans and designs, which they could use upon payment of a small royalty. He was glad to see that the Council for the Preservation of Rural England was already at work saving portions of the countryside from despoliation.

The Rt. Hon. Neville Chamberlain, P.C., M.P., in responding, said that undoubtedly the face of the country was being changed from day to day. The first thing was to get public opinion raised to a sense of need for further steps, and to accept the idea of submitting to some control over individual caprice and will. The next thing was, if possible, to get into closer touch with the builders, who were to-day responsible for so much incongruous and inappropriate building, and induce them to make some arrangement with architects to supply them with plans—without the question of fees being made too prominent—which would exhibit the results of training and knowledge, instead of the freaks which were so irritating and destructive of the beauty of the English landscape.

Messrs. Michael Sadleir, R. G. Spiller and Sir Laurence Weaver, K.B.E., also spoke, and the proceedings then terminated.

The Thames Valley Preservation Scheme.

A conference at Reading discussed the question of the preservation of the natural beauties of the Thames Valley from Oxford to Staines, and resolved that a Thames Valley Committee be formed in affiliation with the Council for the Preservation of Rural England, as a means of facilitating co-operation between local authorities, joint town-planning committees, local societies, landowners, and others.

THE ROYAL SANITARY INSTITUTE CONGRESS, HASTINGS

The thirty-eighth Congress of this Institute, held at Hastings, under the presidency of the Rt. Hon. Sir William Joynson-Hicks, by invitation of the Town Council, was opened on Monday by the Right Worshipful the Mayor of Hastings. He extended a cordial welcome to the Institute members and the delegates present, and at the same time proffered his sincere wishes for a most successful meeting. Later the Mayor opened the Health Exhibition at Queen's-road.

The presidential address was read in the late afternoon by the President in the new White Rock Pavilion. Opening his paper, Sir William said that although the worst sanitary evils had gone, there were unhappily many slum conditions still existing. There were also special difficulties connected with the development of our urban civilisation calling for continuous effort. He would instance particularly the smoke difficulty. We had cleaned our streets, but we had still much to do in the way of cleaning our skies.

It was the great work of the Sanitary Institute to spread knowledge on these subjects, to educate public opinion, and to train the various officers who would act not merely with a view to detecting offences against the law, but with a view to giving skilled advice and help to all members of the public concerned. A sanitary inspector, like every other public inspector, had the duty not merely of finding fault, but of making positive suggestions as to how nuisances could be avoided and remedied. He was, in short, a public servant whose function was to help the public.

The improvements made in recent years in all standards of hygiene had, of course, been reflected in the raising of factory standards. As they knew, the Government were proposing next Session to ask Parliament to pass into law a new Factory Bill. Objection had been raised in some quarters that the present time—when trade and industry were suffering from serious handicaps—was inopportune for the introduction of a Bill placing new burdens on employers of labour. The Government were fully alive to the importance of this point of view, and he had been through the Bill again and again with a view to modifying those provisions which might press unduly upon employers. It was, however, twenty-six years since the last general factory law had been passed, and the Government felt that an amending statute ought no longer to be delayed. Although there had been in the interval since 1901 certain minor amending Bills and numerous codes of Regulations, factory law as a whole had not kept pace with the advance in scientific knowledge and with the general developments of industry, particularly with the development that had taken place since the war. The need for a standard of cleanliness in factories and work-places had, of course, been recognised for a long time, and in the more modern factories the standard was often high. Walls, floors, and ceilings were spick and span. But there were many other factories, particularly these in old buildings, where the standard of cleanliness was low. The factory standard of cleanliness was often very different from the domestic standard. In the domestic houses of our people where women were the rulers, the hidden dangers of dust and dirt and cobwebs were usually fully recognised. In many houses these foes were hunted with a rigour and a frequency which sometimes seemed to the mere man excessive. But in the factory—perhaps because the management of the factory had hitherto been regarded as a man's job—the standard was very different. There were still managers, he feared, who thought a factory was sufficiently clean if the dirt was not patently offensive. Often the danger to health that lurked in accumulations of dust and rubbish and refuse was not recognised.

In the present factory law there was no provision as to a standard of lighting, and although modern factories were usually built with large windows, and so constructed as to be admirably lit throughout, yet there were still many factories in which the light was very poor. The old view was that so long as there was enough light to do the work, this was enough. We were indebted to modern scientific research for a fuller recognition of the fact that light was a great tonic. To-day we recognised the health-giving properties of sunlight. We realised that light had a vital effect on our physique, on our nerves, and on our spirits. If the worker was under-supplied with the great tonic of light, his health and his spirits suffered, and his industrial efficiency was lessened. The provisions in the new Bill as to light would be, he was sure, not only beneficial to the worker, but also of economic advantage to the employer for whom he worked.

Similar considerations arose with regard to ventilation. The dangers from definitely noxious fumes and vapours, from carbon monoxide, and from bad air, had, of course, long been recognised. For some time, also, the dangers of particular types of dust had been realised, and various legislative provisions had been devised with a view to protecting the worker against these specific dangers. But latterly we had realised more fully the importance of ventilation in the wider sense. We have begun to realise the enormous importance of fresh air, and frequently changed air to the efficiency of the worker.

In the new Bill he was proposing, said the President, a further provision with regard to medical supervision. There were certain industries in which a more than average amount of sickness or a generally low standard of health was found to prevail, though there was nothing substantially dangerous or injurious in the processes carried on which could be precisely indicated and guarded against by specific precautions.

The aspects of the problem of public health were many and various. Some of his audience were more particularly interested in housing questions, others in the general questions of drainage and sanitation, others again in the purity of our food supplies and our water supplies. Some specialised on the problem of keeping our skies free from smoke, others on the purification of our rivers. Others again were interested in combating particular diseases. But all were working alike for the end described in the Institute's motto as "Salus generis humani"—the well-being of the human race.

Dr. Charles Porter, M.D., B.Sc., Medical Officer of Health of St. Marylebone, and Chairman of the Congress Committee, proposed a vote of thanks to Sir William. He was supported by Mr. G. P. Chrom, Chief M.O.H. for Copenhagen, who spoke on behalf of the delegates from foreign countries, Dr. B. P. B. Naidu, M.D., M.H., D.P.H., representing the Indian Government, who spoke on behalf of delegates from the Colonies and Dominions, and Alderman Watson Boves, J.P., on behalf of local government authorities in Great Britain.

Sir William briefly responded.

On Tuesday, members and delegates were entertained to breakfast at the Queen's Hotel by kind invitation of the National Temperance League, after which they proceeded to the various section meetings and conferences.

Mr. Lessel S. McKenzie, M.Inst.C.E., city engineer of Bristol, presided over the conference of engineers and surveyors held at the Holy Trinity Hall, Mary-street. In the course of his presidential address, Mr. McKenzie said that the enormous increase in motor traffic on the roads, added to the increased speed and weight, had necessitated entirely new methods of road construction. Surface tarring was the first palliative introduced to prevent the cloud of dust produced from the old waterbound roads making life a misery to pedestrians using the highways, and immediate relief was afforded, and the roads so treated were given an added length of life. This was followed by a very general use of tarmacadam, and later by bituminous roads of various forms of construction, and by concrete roads surface treated or covered with a wearing carpet of asphalt. Probably for really heavy traffic these two latter forms of construction held the field at the present time.

With regard to concrete roads, which he was convinced would make rapid progress in the future, more research work was needed, and while an excess of water in the mixing was to be deprecated, he was not at all sure that there was not danger in keeping it too dry. In regard to asphalt work he was inclined to favour a hot mixture; this was a simple matter in a large town with a central mixing plant, but was, of course, a different proposition in small and rural areas, and it had to be admitted that there were very successful cold mixtures on the market.

An enormous amount of very useful new road construction had been carried out with a view to providing work for large numbers of men unfortunately out of work, and this had been made possible by the financial assistance given from the Road Fund and by grants from the Unemployment Grants Committee. All deplored that the Chancellor of the Exchequer, owing to the straits into which he was driven to balance his Budget, should have found it necessary to make a further and very serious raid on the Road Fund, which was bound to cause a pause in these desirable and, in many cases, urgent works.

With regard to "Housing," which has involved municipal engineers in a very considerable amount of work, a good deal of courage and perseverance had been necessary; destructive, rather than constructive criticism, had been general; the cost of materials had been unnecessarily high and the output of the operatives had been disappointing considering the urgency of the problem. However, any unbiased person comparing the post-war housing schemes with the pre-war method of development would have to acknowledge that a great step forward had been made. The limitation of twelve houses to the acre and the set back of the houses had allowed the beneficial rays of the sun free access to the houses, and the provision of decent gardens had added a new interest to the occupiers and incidentally reduced the necessity for providing allotments.

Though it had been a costly undertaking, he was sure the nation would reap the benefit in the next generation or two in a more contented and healthy population.

Town planning was a comparatively new and difficult duty, to which many were now devoting considerable time. Although at first some landowners were inclined to be suspicious of the powers conferred by the Act they would soon realise the wisdom of the preparation of a plan in advance of development, and that it need not be inimical to their interests. The tendency now was to make a scheme as elastic as possible, only laying down the skeleton of the proposals on the map, omitting all the details, and preparing a set of regulations to be embodied in the scheme which would give the necessary control when development takes place. The problem of applying town planning powers to built-up areas was receiving the serious consideration of the Ministry of Health, but it was an exceedingly difficult task by reason of the many vested interests involved, and it was a moot point whether an amendment of the present Act could be made to meet the case. That there should be some such control was unquestionable.

Useful work was being done in many parts of the country in the preparation of regional plans, but unfortunately there was no statutory power behind these schemes. However, they had the great advantage of bringing the adjoining authorities together to consider in a broad way the best interests of the whole

district, and so gave them a much wider outlook in conducting their own affairs.

In regard to the disposal of sewage, the theory of harnessing biological forces and thereby effecting a great saving was interesting. From time to time new discoveries in the treatment of sewage were made, and the new discovery was hailed as the long-looked-for solution of the problem, but he was afraid these great hopes had not yet been realised. In Germany, at the Gross Zeiter Sewage Works, it was reported that a pure and highly explosive gas was being produced by the purification of sewage at two-fifths of the cost of coal gas. The surplus gas, after supplying the necessary power for the works, supplied 8,000 people with all the gas required for domestic purposes. Also at Emfort a net profit of £4,200 was stated to have been obtained last year by the production of sewer gas and the sludge reduced by 90 per cent. A small plant was operating near Bristol where a 6 b.h.p. gas engine ran continuously for a month on sewer gas. If by the simple process of forcing air into fresh sewage these results could be obtained there was certainly great hope for the future.

Papers on questions of interest were then read by various members, Major H. H. Harold, O.B.E., M.D., speaking on the "Role of Ammonia in the Purification of Water," Mr. A. P. I. Cotterell, M.Inst.C.E., F.S.I., on "The Treatment of Sludge," Messrs. A. S. Parsons, M.Inst.C.E., and H. Wilson, B.Sc., dealing with "The Activated Sludge Process," while Mr. E. J. Silcock, M.Inst.C.E., F.S.I., gave a "Description of a Small Sewage Farm." In the course of his paper on "The Treatment of Sludge," Mr. A. P. I. Cotterell said that the ultimate problem of sewage disposal might almost be said to have resolved itself into the problem of the treatment of the sludge. It was now possible to purify the liquid portion of sewage to any required degree, but without adequate treatment of the sludge no disposal works could be called complete. The chief methods of treatment were :—

(1) Pouring crude sewage over land or special material; (2) Spreading semi-liquid sludge over land; (3) Trenching; (4) Lagooning; (5) Drying on filters; (6) Septicization; (7) Digestion; (8) Yeast fermentation; (9) Activation; (10) Filter pressing; (11) Dumping at sea; (12) Burning; (13) Distillation; (14) Gasification; (15) Manufacture of fertilisers. The object of treatment was to so transform the noxious ingredients that they could become of use and service to humanity.

In all methods of treatment upon land or specially prepared surfaces the essential point was to bring the air into contact with the organic solids.

By digestion, carried out in one or more series of tanks, with an adequate allowance of time, sludge could be considerably reduced in bulk, and finally brought to a spadeable form upon drying filters. Activated sludge could be readily de-watered and dealt with in this way.

When dumped at sea the valuable constituents were not entirely lost, said the lecturer, since after digestion, they were probably used by fish life.

Pressing was less used, but abroad centrifuge and drying machines were being introduced. Gas production from digested sludge was a promising development, while sludge could also be used as a fertiliser, especially when fortified with other compounds. In conclusion the lecturer said that more scientific investigation was needed, particularly as regarded digestion which appeared to have some relation to the hydrogen-ion concentration of the sludge.

The meetings of sections and conferences were continued on Wednesday, when meetings on the question of "Hygiene in Industry," under the presidency of Major Isidore Salmon, C.B.E., and "Sanitary Inspectors," under the presidency of Mr. W. G. Kershaw, M.B.E., were held. In the course of his presidential address on "Hygiene in Industry," Major Salmon said that he would ask them to consider this question under two main headings, namely :—

(a) Personal hygiene as it applies to the worker.

(b) Factory hygiene as it applies to the production of food in the factory.

He did not propose to deal in any detail with the question of personal hygiene, because this was a subject which had occupied attention on more than one occasion. There were two methods of dealing with the problem of factory hygiene, namely, to have the service administered by the same authority which concerns itself with personal hygiene of the staff, and secondly, to have an entirely separate department which should supervise and develop the purely factory hygiene as it applied to plant, machinery, etc.

He would add one or two remarks on the question of factory disinfection. Unfortunately, in many cases, disinfectants were used as deodorants, and in fact many disinfectants were advertised as such and their makers based many of their claims on their deodorising properties. It seemed to be perfectly clear that this was most unsatisfactory, because the use of such a disinfectant covered up the effect of some bad condition which otherwise advertised itself to all and sundry by the disagreeable smell given off. Surely the correct method of dealing with such a thing was to remove the cause and not mask the effect. Consequently he would strongly urge that in the question of factory hygiene the use of disinfectants be carefully supervised, and that the indiscriminate use of them be condemned by all who were interested in the welfare of their workers, and in the quality, particularly in the case of foodstuffs, of the goods which they produced.

In many factories also, said the President, sufficient attention had not been paid to efficient ventilation. Ventilation had often been confused with the provision of strong currents of air, and while admittedly the problem of ventilation was a very difficult one, especially in large factories, he believed that much improvement in the general health of the workpeople would accrue if those responsible for designing factories would over-ventilate rather than under-ventilate.

Papers were then read upon "Industry and Disease," by Dr. Frank Shufflebotham, M.D., and on "Factory Legislation," by Mr. Rhys J. Davies, M.P. In this latter paper, Mr. Davies dealt with the medical examination of young persons for factory employment, and on the advisability of linking up the School Medical Service with the work of the Certifying Factory Surgeon and later with Panel Practice under the National Health Insurance Scheme. He emphasised, also, the desirability of establishing a complete industrial medical system.

He discussed fully the necessity of new standards of cleanliness, temperature, ventilation and lighting, and touched, also, upon the point as to whether the local or central authority should be granted additional powers in this connection and in relation to sanitation.

Welfare provisions relating to supply of drinking water, washing facilities, first-aid, accommodation for keeping and drying workers' clothing were subjects also dealt with in the course of the paper.

In the course of his presidential address on "Sanitary Inspectors," Mr. W. G. Kershaw said that the importance of the principles of local government to the British people was now agreed upon; but, whilst the principle was accepted, it had not worked out in practice in such a way as to give general satisfaction, or resulted in that effectiveness of administration which was desired. However good a system might be, much depended upon the ability, the training, and the position of those whose duty it was to translate it into action. It was also well known that some Councils had not only retarded, but in many cases prevented, the efficient administration of the statutes which it was their duty to see carried out. Parliament might propose, but the local authority could effectually dispose.

If all the various Public Health Acts had been put into operation in the past, England would be a cleaner, purer, and healthier country to-day than what it was. A very considerable part of the work of every sanitary inspector consisted in getting things put right which never should have been wrong.

In conclusion, the lecturer said that the importance of Public Health administration was such that it should once and for all be delivered from the influences of the ballot box as at present operated. It had been stated that many of the most competent citizens in every district would be willing to serve upon the local health authority but that they were unwilling to face the stress and turmoil of an election under present day conditions, and there was a great deal of truth in that contention.

Public opinion was ripe for a new era in the Public Health service, an era of enhanced efficiency and fruitfulness. The nation's hygienic and sanitary work must be entrusted to local authorities untrammelled by the incubus of vested interests and influences.

Local Commissioners of Health comprised of persons appointed by the Ministry of Health for their knowledge, fitness and ability to deal with the many complex questions and problems which modern conditions presented and co-ordinated with the local health officials would provide a scheme of administration by means of which the value of Public Health work would be immensely enhanced, and administrative officers would be encouraged to redouble their activities in the interests of the public whom they served.

Papers on various topics of sanitary interest were then read and the morning's proceedings closed. In the afternoon visits were paid to various sanatoria, hospitals, etc., while in the evening members and delegates attended a reception at the White Rock Pavilion by the Rt. Worshipful the Mayor of Hastings.

British Cold Storage and Ice Association.

This institution, founded in 1900, after over a quarter of a century of existence, has, at its annual meeting last month, changed its name to "The British Association of Refrigeration," as its representation of the industry of mechanical refrigeration and all its many applications has long extended beyond the cold stores and ice interests indicated in the old title. To the refrigerating industry of Great Britain belongs the great task of securing the fresh condition and the purity of a large proportion of the perishable food supplies of the nation which, before the institution of the amended Food Regulations, were often treated with chemical preservatives.

Welsh Housing in 1926.

We have received "The Welsh Housing and Development Year Book, 1927," being a Review of the Housing Situation in Wales for 1926, obtainable, price 2s., from the Welsh Housing and Development Association, 38, Charles-street, Cardiff. The book contains a number of informative and interesting articles on subjects of architecture and artistic interest. Mr. T. Alwyn Lloyd writes on the "Enjoyment of Architecture"; Mr. H. Avray Tipping on "The Saving of Old Cottages"; Professor Patrick Abercrombie on the "Preservation of Rural Wales," and Mr. H. M. Vaughan on "National Parks and Playing Fields." From the statement of State-assisted housing progress (p. 51), we see that up to December 31, 1926, out of 40,583 houses authorised by the Ministry of Health to be erected, 29,422 have been completed, and 5,069 were actually under construction.

CORRESPONDENCE

(*Continued from page* 85.)

Salaried Architects and Private Practice.

Sir,—I have to thank D. S. for his reply to my letter. As a minor prophet and specialist in diseases of the eye and nose he shows considerable ability. His opinions are of some value as he states that he is unconnected with any Government department, but as he also states that he does not know one Government architect intimately he can hardly be called an authority on this question. The present writer knows dozens. Among them are some of his dearest friends.

D. S. states that certain of my statements are "simply silly" and "will do me more harm than good." One does not write such letters for their own good but for other people's. I am not talking about a subject with which I am unacquainted. I know many able men in Government posts who are doing fine work, but that does not affect the principle underlying this question.

Take the case of the Ancient Monuments department of the Office of Works. Some members of this department talk and act as if to them alone the Almighty has imparted the secret of handling old buildings. They are not content to deal with the many buildings entrusted to their care, but undertake commissions outside their jurisdiction to save them (so they say) from unwise handling. This work is said to be done in an honorary capacity. It is easy to do work in an honorary capacity if the work they are paid for is neglected.

D. S. likes my word "seemingly." This word was inserted as a concession to the fact recognised by the present writer that other people have a right to a diverse point of view if they can substantiate that point of view by sound and logical arguments. D. S.'s arguments are neither sound nor logical. Mr. William Woodward gives clear and convincing reasons of the obvious injustice of the present practice, and I am sure that if the question were put to the vote of the whole profession his motion would be carried by an overwhelming majority.

At Spes Non Fracta.

Sir,—"Architecture has been prospered at the call of a Government."

What an opportunity must have been lost when a salaried official was entrusted with the rebuilding of St. Paul's Cathedral! Still, it may afford Mr. Woodward and others some encouragement to remember that, although it took fourteen years before Sir Christopher Wren was finally got rid of, "public opinion" was successful in causing his salary to be reduced in 1697, for his lack of attention to his official work, "the better to encourage him to finish the same work with the utmost diligence and expedition," the result, I have no doubt, of his undertaking too much private work at Cambridge and elsewhere.

"At spes non fracta."

Belfast. P. S. Wilshere.

Local Experts.

Sir,—I noticed recently, in the professional papers, that the Wolverhampton Council were advertising for tenders for a new building they were erecting. The architects were a London firm, and the quantity surveyor was a Wolverhampton surveyor. I have always maintained that this is, as it should be—with an architect, or an artist, clients may employ the services of the man whose work suits them best, wherever they live. But when it comes to the actuary or measuring work, the result is always better if a local surveyor of standing is employed. He is familiar with the terms and mode of measurement used in the district, with the result that local men tender, with more confidence, and at lower prices, than aliens (who may be used to the terms employed by an alien surveyor), and it frequently, therefore, enables patriotic authorities to allocate to local contractors a share of their local work.

Leeds. W. Hoffman Wood.

[Other letters are held over until next week.—Ed.]

GREATER LONDON HOUSING CAMPAIGN

VI.—Local Authorities' Progress up to March 31, 1927.

By James P. Orr.

In previous articles the progress of the Greater London Housing Campaign was reviewed* as at September 30, 1925, March 31, 1925, and September 30, 1926. The purpose of this article is to bring the review up to March 31, 1927.

The Minister of Health's decision to reduce the subsidy in respect of houses completed after next September has given a special impetus to the activities of local authorities, with the result that even the phenomenal record of the six months to September 30, 1926, was surpassed in the following six months, when the output for all England and Wales was 37,361 houses, as against 36,742 in the previous six months, thus bringing the total post-war output up to 307,767 houses. The corresponding figures for Greater London were 5,717, 4,852, and 46,467, and those for the London County Council 2,505, 2,294, and 16,544 respectively.

In the last six months the Greater London output improved by 18 per cent. (the L.C.C.'s output by 9 per cent. and that of the other 24 London authorities by 26 per cent.) in comparison with the previous six months, whereas outside London the output fell by one per cent. Greater London's output of municipal houses is now over 15 per cent. of that of England and Wales, while that of the L.C.C. is about 44 per cent. of that of Greater London.

The attached table gives figures of recent progress in Greater London :—

County.	No. of houses completed by L.C.C.	No. of houses completed by other L.A.	No. of L.A. in County. Those who built the 5,717houses	No. of L.A. in County. Remainder.
London ...	997	513	10	20
Essex ...	1,477	268	6	12
Hertford ...	0	165	6	3
Middlesex ...	31	100	22	14
Kent	0	420	8	4
Surrey ...	0	838	14	6
Total	2,505	3,212	66	59
Corresponding figures for six months to September 30, 1926	2,294	2,558	66	59

Distribution of Local Authorities' New Houses.

The distribution of the 5,717 houses completed in the six months to March 31, 1927, is shown in the following table :—

The figures in this table are taken from official sources; but they do not reflect the full activities of the building industry, for they have been picked out as figures representing real progress in the extension of accommodation for wage-earners, and therefore figures relating to (*a*) dwellings of rateable value above £35, and (*b*) dwellings reserved for the re-housing of families whose old dwellings are to be demolished in improvement and school-building schemes, are excluded.

As regards (*a*) it is held that few of the dwellings rated above £35 are let to wage-earners, and that those few are far outnumbered by houses rated at £35 or less and let to tenants who are not wage-earners.

As regards (*b*) the new houses do not add to existing accommodation, but merely substitute new for old. It must be remembered, however, that the new dwellings are immeasurably superior to the old in quality, and that this rehousing work is a necessary preliminary to the reconstruction which is ultimately to lead to the elimination of all slums. By the end of last March, 710 dwellings had been completed in post-war re-housing schemes under Part II. of the Housing Act, viz. : 630 by the L.C.C., 36 by Poplar, 20 by Bethnal Green, and 25 by Battersea Councils. Of these, 205 were completed in the last six months, viz. : 199 by the L.C.C., and six by Battersea.

If the L.C.C.'s 199 be added to their 2,505 under Part III, their aggregate output in the last six months gives an average of 102 new dwellings per week, which beats their previous best record of 98 per week in 1922-3.

(a) L.C.C. Houses.

Of the L.C.C.'s 2,505 houses, 1,477 are in Becontree, some 11 miles from the centre of London, and 833 in Lewisham, near the south-east border of the county. Residents of extra-Metropolitan areas are not accepted as tenants of these 2,310 houses; and it is really only people whose work lies in the easternmost and southernmost Metropolitan boroughs who can make much use of them; people who are employed in other Metropolitan boroughs find them unacceptable on account of the expense and loss of time attaching to journeys to and from work. Of the remaining 195 L.C.C. houses, 164 are in Roehampton and 31 in Tottenham. Of those in Roehampton, 129 are Addison houses and 35 Chamberlain houses; the other 2,341 houses built by the L.C.C. are all Wheatley houses.

Since the 1921 census, only about 600 houses other than those reserved for re-housing had hitherto been provided by the L.C.C. in the north-western quadrant of London. It has been a great disappointment to the thousands who have so long been waiting for new houses in this quadrant that no houses were completed on the L.C.C.'s new estate at Hendon during the six months under review. Houses are now, however,

* *Builder*, January 22, 1926; July 29, 1926: and February 18, 1927.

being completed in large numbers every week.

(b) Other Local Authorities' Houses.

It is to be regretted that 59 of the 124 Local authorities outside the L.C.C. completed no houses during the six months. There was, however, a very marked increase in the output of the remainder in comparison with that of the previous six months.

Only 15 flats, all in St. Marylebone, were built under the Addison scheme; but 1,644 houses were completed under the Chamberlain, and 1,553 under the Wheatley scheme, against 1,125 and 1,381 respectively in the previous six months. By far the largest contribution was that of Croydon, 386 Wheatley houses. Other large contributions were :—

(i) under the Chamberlain scheme : Enfield, 182; Mitcham, 118; Wandsworth, 115; Erith, 100; Friern Barnet, 91; Hornsey, 85; Uxbridge, 82; Greenwich, 80; Deptford, 88; and Ilford, 80;

(ii) under the Wheatley scheme : 132 in Woolwich; 99 in Ealing; 66 in Edmonton; 64 in Godstone; 60 in Beckenham; and 60 in East Ham.

Wimbledon and East Ham have now emerged from the category of local authorities who have not yet built an average of 10 houses per annum since the war; but there are still seven of the 42 authorities south and 25 of the 82 north of the Thames remaining in that category.

Rents in the Three Classes of Schemes.

The position as regards rents remains much as it has been throughout the last three years; rents still rule far too high to permit of any general improvement in the condition of those in most ugent need of relief from bad housing. The maintenance of rents of new houses at their old high pitch is only what one might have expected in view of the announcement of the cut of £25 in the subsidy for houses completed after September, 1927. That announcement tended in some cases to make local authorities and private builders of subsidised houses more anxious than ever for early completion of houses; and the consequent extended demand on the resources of the trade tended, of course, rather to enhancement than to reduction of cost. Possibly, in other cases, local authorities, despairing of completion of houses before October, may have been deterred by fear of the consequent loss of £25 per house from placing contracts, except on terms ensuring a reduction in cost. From whatever cause, there must have been a pretty general reduction in cost *outside the London region;* for, as recently announced by the Parliamentary Secretary to the Minister of Health, the average price of non-parlour houses was £24 less in the quarter ending March 31, 1927, than in the previous quarter (£424 against £448). This refers to constructional prices quoted in local authorities' contracts newly sanctioned in the particular quarter in *all parts of England and Wales. In the London region,* however, the corresponding figures were :—

For parlour houses, £562 in the March quarter against £541 in the December quarter;

For non-parlour houses, £494 in the March quarter against £476 in the December quarter.

With nothing in the shape of cheaper money to counterbalance this rise in cost of houses, it was not to be expected that local authorities would lower the existing scale of rents. They could do so only at the expense of an addition to the burden put upon the public purse by the normal annual subsidy per house per annum of £6 under the Chamberlain scheme, and £13 10s. under the Wheatley scheme. In a few places, *e.g.,* Poplar and Woolwich, this addition has been held to be justified by the urgency of the housing situation; but most local authorities think that the ratepayers have already had put upon them as much as they can bear.

For the bulk of the 5,717 houses built by local authorities in the six months under review, the general range of weekly rents (including rates) is as shown in the following table :—

	3-roomers.	4-roomers.	5-roomers.
Addison scheme :—			
L.C.C.	16s. to 17s. 6d.	16s. 6d. to 21s.	19s. 6d. to 22s.
Other local authorities ...	16s.	20s.	—
Chamberlain scheme :—			
L.C.C.	14s. to 17s.	15s to 20s.	17s. 6d. to 20s.
Other local authorities ...	17s. to 18s.	15s. to 21s.	17s. to 22s.
Wheatley scheme :—			
L.C.C.	13s. 6d. to 18s.	14s. to 20s. 6d.	16s. 6d. to 21s
Other local authorities ...	13s. to 15s.	15s. to 20s.	17s. to 23s.

Outside Becontree, the lowest L.C.C. rents are generally from 1s. to 2s. more than the lowest shown above.

Dwellings with rents less than 15s. per week are rare. The L.C.C. have a good few at Becontree; but the cost of travelling to and from work makes even these rents prohibitive for poor families there, except for those whose work is in the east of London County.

To large families who require three or four rooms, the three-roomers, which constitute the bulk of the dwellings let at 15s. or less, are of no use.

Present Position.

The present position may be stated as follows :—

While London builders have recently produced houses in vast numbers, each year's record beating that of every previous year, the bulk of these houses have been occupied only by the comparatively well-to-do. In spite of the subsidy, it has, on account of the high cost of housing schemes and of money, been found impossible to let many of the new houses at rents which families earning less than 70s. per week can afford to pay.

In Central London such families tend to congregate as tenants of one, two, or three overcrowded rooms in high tenemented houses, *i.e.,* houses originally built for one family each, but now occupied by one or more families on each floor. It is this kind of overcrowding, far more than the overcrowding of houses on land, that forms the crux of the housing problem in large sections of London, notably in the north-western boroughs. Some indication of the deplorable conditions in which these overcrowded families live is afforded by the 1921 census figures, which show that six years ago there were 52,525 people living more than three per room in the boroughs of Kensington, Paddington, St. Marylebone, St. Pancras, Finsbury, and Islington.

Little has been done for these families in these last six years; and their living conditions must have grown rather worse than better, because

(a) in many cases the families are growing much faster than their earnings;

(b) as children grow up, more bedrooms are required for segregation of the sexes.

The cheaper pre-war dwellings rarely become available for these families, because (i) local authorities and housing trusts generally reserve vacated dwellings on their estates for their own tenants who have outgrown their pre-war homes; (ii) private landlords, escaping from the control of the Rent Restriction Act when a dwelling is vacated, too often raise the rent to a figure far beyond what the families in question can afford to pay.

Local authorities other than the L.C.C. let their houses only to families living within their respective limits; so, as there is no land for borough councils to build on in the centre of London County, the overcrowded families living there have only the L.C.C. to look to for relief from bad housing .

Prospect.

There are some indications that in certain suburbs of London the supply of small houses for those who can afford to buy them is somewhere near overtaking demand. There may, before long, be some approach to the pre-war margin of empties in these suburbs, and then it may well be that local builders will seek fresh fields for their enterprise, and their competition may bring house-contract prices down in other suburbs. This fall in prices will not bring rents down, if it is to be accompanied by an equal fall in subsidy. There can be no fall in rents, unless and until there is a reduction in the cost of a house substantially exceeding the reduction in the subsidy. There is at present nowhere any sign of such a substantial reduction. For the bulk of those in most urgent need of relief from bad housing there is, therefore, no prospect of such relief in the near future.

What is urgently required now to improve the situation is that a large proportion of the new houses, as they are built, and of the old houses, as they are vacated, should be made available at rents between 10s. and 15s per week (including rates) for seriously overcrowded families who cannot afford more.

A necessary preliminary, which has already been advocated in *The Builder,** is a special survey, borough by borough, of local needs, designed to identify really urgent cases and provide material for an immediate housing programme for their direct relief. So long as cost of building remains as high as it is now, there is little prospect of accommodation being found for such urgent cases at rents as low as 10s. to 15s , unless capital is offered for this special purpose at 3 per cent. or 4 per cent. interest. Several charitable societies—*e.g.,* the Church Army—have built a few new houses or reconditioned old ones with such specially raised capital; but the extent of this work is at present negligible compared with the need.

In the opinion of the writer, a much greater and more rapid advance could be made, if all local authorities would reserve at least half of their dwellings for urgent cases only, and, while maintaining the average rent of an estate at the figure required to avoid increasing the burden on the public purse, reduce the rents of some of the houses by, say, 2s. 6d. per week, counterbalancing this reduction by increasing the rent of twice as many houses by 1s. 3d. per week.

* Vide *The Builder* of October 30, 1925.

The Advertiser's A.B.C.

We have received from Messrs. T. B. Browne, Ltd., 163, Queen Victoria-street, E.C.4, a copy of the 1927 edition—the forty-first annual issue—of this compendium. The various sections contain much information which is likely to prove useful in the extreme to the advertiser and business man. Both in the manufacture and in the marketing of his products, the efficiency of every advertiser's business is dependent upon up-to-date and accurate information. Publicity, moreover, to attain its maximum effect, must be accompanied by progress in methods and processes of manufacture of the articles advertised and be based upon accurate knowledge of competitors' activities and goods as well as of the needs and potentiality of the public to which it is directed. The various articles dealing with Business Information, Poster Publicity, Advertising Display and Oversea Trade will assist those whose duty it is to study the sale problems of to-day, while the short epitome on the Law and Practice affecting Trade Marks will be found both instructive and informative. The "A.B.C." is priced at one guinea.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—Ed.

Substitute for Tiling.

[Reply to Inquiry in July 1 Issue.]

Sir,—I feel that I am perhaps taking up your space in an unjustifiable manner, since this letter is not a direct answer to your correspondents. I would like to ask a question which many similar building substitutes call to my mind. Is it really worth while to seek for untried substitutes for materials which we know to be sound and lasting? If the builder can save £2 per square of roofing, he generally thinks it worth while. Yet on the ordinary small house there are not more than 10 squares, or a capital saving of £20, which equals £1 per year. Who would hesitate to expend such a small premium as this to ensure a tight and dry roof?

Conservative.

Defective Rough Casting.

Sir,—We have recently erected a house for a client who required the rough cast to be kept as white as possible. In our anxiety to follow out the client's instructions, we used too much lime, and the consequence is that the rough cast is badly cracked, quite soft, and can be easily picked off with the finger and thumb. We do not, naturally, wish to go to the expense of removing the whole of the offending work. Can you or one of your readers suggest a remedy? R. N.

Comparative Durability of Tiles and Asbestos.

Sir,—Could you give us any definite information in respect of the comparative durability of tiles or slates and asbestos corrugated sheets? Further, have you any record as to the year in which corrugated asbestos sheets were first introduced as a roofing material in London?

A. & P.

Lime for Plastering.

[Reply to "Puzzled," July 1.]

Sir,—The chemical test would give the amount of calcium in the lime, some lime might only give 80 per cent. of calcium, hence the reason for the chemical test being less than the lime. As regards mixing, of course, the higher the calcium the better the lime.

Thos. Dawber.

[Reply to "Puzzled," July 1.]

Sir,—In your issue of July 1, "Puzzled" states that he watched plaster being mixed with one part of putty lime to three parts of sand, but the resultant mixture, on analysis, proved to be lime, one part; sand, four parts. "What Else," in your issue of July 8, suggests that the lime putty may have originally been adulterated with sand. This does not appear to me to be the correct solution. Presumably the original mixing was by bulk measure, and presumably the analysis was of dry, or semi-dry, plaster, and the result of the analysis would merely point to the fact that the bulk *putty* lime contained 25 per cent. or more of water. With the 25 per cent. water dried out, the analysis would, of course, show the proportion as being four to one.

J. R. T.

Rating Valuation.

Sir,—Perhaps you will be so kind as to reply to the following through the columns of your journal. Assuming rates to be 18s. in the £; ground rent £8 15s. per year; Poor Law valuation £12; what would be the outlay per year, allowing a small amount for repairs and insurance? How is the rating and the Poor Law valuation on any given house arrived at?

Novice.

Road Charges.

[Reply to "Householder," July 1.]

Sir,—Under Section 150 of the Public Health Act, 1875, the apportionment of the surveyor is binding and conclusive on the owner, unless within three months from service of notice on the owner he, by written notice, disputes the apportionment. Such notice of dispute should preferably be in general terms in order to avoid complications and make it effective; for instance, that he (the owner) objects to the claim against him under the apportionment and that he will be prepared to dispute it will be sufficient.

In case of dispute the matter is referred to arbitration under Sections 179-181 of the Act. It should be noted that a notice of dispute may be withdrawn by an owner at any time prior to a submission by him to arbitration, and that the arbitrator is the mere substitute of the surveyor, to determine, in case of dispute, that which the surveyor would have finally decided in a case where there was no dispute.

Now it should be noted that the above Section 150 does not apply to a district in which the Private Street Works Act, 1892, has been adopted. Where this last-named Act is in force the procedure is different. Under Section 7 of the 1892 Act, during one month from the date of the first publication of the resolution of the local authority approving the specification, etc., the owner may, by a written notice, object to the proposals on some six grounds or more—for instance: (1) that the proposed works are insufficient or unreasonable or that the estimated expenses are excessive; (2) that any premises ought to be excluded from or inserted in the provisional apportionment; (3) that the provisional apportionment is incorrect, in respect to the degree of benefit to be derived by an owner, etc. Such objections go before a Court of Summary Jurisdiction for their determination.

After the final determination, by the justices, of the objections, the works may be executed; and when completed, the surveyor makes a final apportionment which though conclusive for all purposes, is, under Section 12, subject to the quashing or amending of the same by the justices, after hearing objections (which may be raised in writing within one month) as to, for instance: (1) the actual expenses exceeding those estimated by more than 15 per cent.; (2) that the final apportionment is not made in accordance with the section; (3) that there has been an unreasonable departure from the specification, etc.

This further reply, together with that already acknowledged, will enable "Householder" to determine his position and whether he should take the matter farther. It is quite possible that if all the facts were known, and properly prosecuted by his seeking legal aid, he would obtain the redress he seeks.

Law.

Rubble Masonry.

Sir,—We should be obliged if you could let us know approximately the price per cubic yard of Rubble masonry about the year 1894.

Cadoxton.

Building Construction.

Sir,—I wonder whether any of your readers could put me on the track of a really good book on Building Construction? I have been referred to several "standard" books, but find the exposition too cut and dried. Is there any book published which treats of the science in a really practical form, describing, for instance, step by step, actual specimens of building construction from a given set of plans? Or one that gives a good idea of how to set about a complicated "repair" work from actual examples?

Student.

THE WEEK IN PARLIAMENT

Westminster, *Wednesday*.

Rent Restriction.

Mr. C. Williams asked the Minister of Health whether his attention had been called to the Report adopted by the London County Council on the subject of the Rent Restrictions Acts, in which it was recommended that the Acts should be continued for a further period of one year, and whether he was yet in a position to announce the proposals of the Government in this matter.

Mr. Chamberlain said he was aware of the Report to which the hon. member referred, and he had carefully considered the recommendations which it contained. Representations on the subject had been made to him from various quarters, and he had received a number of suggestions for the Amendment of the Rent Restrictions Acts, some of which merited careful consideration. In view, however, of the difficulty of finding time during the present Session for an amending Bill, it was proposed to provide for the continuance for one year of the Rent Restrictions Acts in their present form by including them in the Expiring Laws Continuance Bill, as was recommended in the Report of the London County Council.

Purchase of Houses.

Mr. R. Morrison asked the Chancellor of the Exchequer whether he was aware that many persons who were purchasing their houses through the Small Dwellings Act, building societies, and on the instalment system, were being served with notices to pay income tax under Schedule A (property tax) although their incomes were below the income tax limit; and, in order to remove their doubts, would he make a statement on this matter.

Mr. McNeill, Financial Secretary to the Treasury, said that if a house-owner's income was of such an amount that he was not liable to income tax, he could claim exemption from any tax under Schedule A charged in respect of his property. Where the property was subject to annual charges, such as ground rent or mortgage interest, the exempt owner would merely be called upon to pay to the Revenue the tax which he deducted from his ground landlord or mortgagor, upon whom, and not upon the owner, the charge of such tax therefore fell. If the hon. member had in mind any case in which it was alleged that an exempt owner was being called upon to pay—and ultimately to bear—income tax under Schedule A in respect of his property, and would furnish him (Mr. McNeill) with the necessary particulars, he would gladly have the matter investigated and would, in due course, communicate to him the result.

Mercantile Marine Memorial.

The Mercantile Marine Memorial Bill has received the Royal Assent.

"Guide to Current Official Statistics."

Perhaps one of the most striking of post-war developments has been the increasing recognition of the importance of statistics in all branches of activity, in the organisation and management of commercial and industrial enterprises as well as in the investigation of social and economic problems. Government publications are the most important of all sources of statistics in the United Kingdom from the point of view both of their scope and of their authority. The complaint used to be, however, that this valuable material was unknown and inaccessible except to the few who had specialised in the study of official publications. The introduction of the annual "Guide to Current Official Statistics" has removed all difficulties that may in the past have stood in the way of those who wished to avail themselves of this indispensable source of information. The 1926 volume is now ready, and may be obtained, price 1s. net, or post free 1s. 4d., from H.M. Stationery Offices.

THE BUILDING TRADE

THE LAW OF FIXTURES.—XII

By W. T. CRESWELL, Barrister-at-Law; L.R.I.B.A.; Associate (late Fellow) of the Surveyors' Institution; &c.

REMEDIES FOR THE RECOVERY OF FIXTURES OR THEIR VALUE AFTER THEIR ILLEGAL REMOVAL.

Waste on the Removal of Fixtures.

The severance or removal of fixtures may be an act of waste, i.e., an act causing defect to the premises; and an action for waste is a remedy against a tenant in possession, whether for life or for years. Waste being a tort, or wrong, or omission which arises at law independently of any agreement.

A landlord may maintain an action for waste, to the amount of the loss to the reversion, when fixtures which have become part of the inheritance are improperly removed by a limited owner; and this whether the removal amounts to a breach of a covenant of the lease or not; or, of course, he may sue for breach of the special covenant contained in the lease. Also a tenant has, during his term, sufficient legal interest in the fixtures to entitle him to maintain an action against a third party who wrongfully removes them; even though at the end of his term he may be bound to leave them for the use of his landlord (see Hitchman *v.* Walton: 1838, 4 M. and W. 409).

Remedy by Injunction.

Another kind of remedy may be sought from the Court, which will grant an injunction to restrain a tenant from removing fixtures when he intends or threatens to do so, such fixtures being the property of the owner of the premises and actually annexed thereto. So they must remain annexed until such times as the right in them is determined (see Richardson *v.* Ardley; 1869, 33 L.J. Ch. 508). The Court will not, however, grant an injunction in respect to ameliorating waste, i.e., that which is technically waste, but the unavoidable result of changing the nature or purpose of the premises (see Doherty *v.* Allman; 1878, 3 A.C. 709). Similarly the Court may grant an injunction to restrain a breach of any covenant in a lease and a tenant who has covenanted to yield up at the end of the term *all* fixtures, will, under such a covenant be restrained from removing even trade fixtures, unless they have been expressly excluded from the "all fixtures" by the covenant.

Remedy by Action.

A person having the right to remove fixtures may maintain an action against the person subject to that right; and may also recover the value of the fixtures, as and when severed from the freehold (see London and Westminster Loan Co. *v.* Drake; 1859, 6 C.B., N.S. 798). It has been held that the value of fixtures may be recovered under a declaration for "goods, chattels and effects." but not under a declaration for "goods sold and delivered" (see Lee *v.* Risdon; 1816, 7 Taunt, 188).

In removing fixtures in breach of a covenant their value as fixtures, and not merely their chattel value, may be recovered (see Thompson *v.* Pettitt; 1847, 10 Q.B., 103). In no case, however, can more than the real amount of damage sustained be recovered. In Watson *v.* Lane; (1856) 11 Ex., 769, for instance, a landlord with a reversionary interest of only three days in the freehold was held only entitled to the amount of damage he actually sustained by being deprived of the possession of the fixtures for these three days.

An agreement to sell fixtures need not be in writing in that it is not an interest in land; so where a tenant agreed a few days before his tenancy expired, and at his landlord's request, to give up fixtures which he had purchased on entering the premises, and which he had a right to remove during his tenancy, the landlord agreeing to repurchase them at a valuation if and whenever the tenant wished to remove them, it was held, the tenant was entitled to recover their value from the landlord, though the agreement was not in writing (see Hallen *v.* Runder; 1834, 1 Cr.M. and R., 266). Also, in Lee *v.* Gaskell; (1876) 1 Q.B.D., 700, where a tenant of premises had become bankrupt and the trustee in bankruptcy subsequently sold the tenant's fixtures in the premises to the plaintiff, who then sold them to the landlord of the premises, the defendant. There was no agreement in writing, the value of the fixtures was above £10. It was held that the sale did not come within section 4 of the Statute of Frauds, as the sale of an interest in land nor within section 17 as the sale of goods and chattels, and that the action could be maintained. In Salmon *v.* Watson; (1819) 4 Moore, 73, defendant agreed orally to take a house and to purchase the furniture and fixtures at a valuation. An inventory of both the furniture and fixtures was made, and the gross amount of the two was placed at the foot of the document. It was held that the defendant, having taken possession of and enjoyed the furniture and fixtures and paid part of the sum due for them, was liable for the remainder of their value, and further that he could not object on the grounds that the plantiff's title to the house was defective

Trespass.

It has been previously stated that unless a lessee uses, during his term, his continuing privilege to sever tenants' fixtures, he cannot (unless he be holding over as of right or under some statutory power), remove them afterwards. Also, even if a tenant has quitted possession and with the permission of his landlord has left fixtures behind for the purpose of enabling him to make terms with the incoming tenant, he cannot claim ownership if the latter refuses to take the fixtures. A tenant whose term has expired, and who has been required to give up possession, but does not do so, is not entitled to remove fixtures after the completion of the agreed term of tenancy.

When fixtures are severed from the freehold they are then said to be of a chattel nature; and the person having the right of possession in them may maintain an action for their wrongful removal against the person taking them away or severing them. The action is one of trespass *de bonis asportatis*—a variety of trespass or tort for the wrongful taking of chattels. Where a tenant held over on the expiration of his lease because the incoming tenant, who was to rebuild the premises, had failed to pay him an agreed sum for the fixtures, the landlord brought an action for ejectment and the tenant removed the fixtures. It was held that the tenant was a trespasser when he removed the fixtures; and, further, that the landlord was only entitled to recover from the tenant the actual or breaking-up value of the fixtures (see Barff *v.* Probyn; 1895, 64 L.J., Q.B. 557).

The plaintiff in an action of trespass to goods cannot, however, succeed unless he can show that he had actual possession, or a right to possession, of them when the trespass was committed. In Davis *v.* Danks; (1849) 3 Ex., 435, an auctioneer was put into possession of a house for the purpose of selling the fixtures therein, these being attached to the freehold. The fixtures were to be sold as fixed, the purchaser was to detach and remove them. It was held that the auctioneer had not such a possession as would support trespass *de bonis asportatis* for their wrongful removal. He had no possession of the fixtures as chattels, and was only authorised to sell the right of removing them.

Trover.

If a tenant removes fixtures when he is not entitled so to do, the owner may maintain an action against him in the nature of the old action for trover, conversion, or detinue (see Hitchman *v.* Walton, *supra*). The action of "trover" (also termed one of "conversion," though "wrongfully depriving" is the term now more frequently used) was a special action which might be maintained by any person who had either an absolute or special property in goods, for the recovery of the value only of such goods from another who having, or being supposed to have obtained, possession of such goods by lawful means, had wrongfully converted them to his own use. The name "trover" is sometimes used at the present day in a similar action, though it is now more usual to bring an action claiming delivery of the goods and damages for their wrongful detention—i.e., "detinue." Until fixtures are severed from the realty, no action for them can lie; and a tenant cannot, even during his term, maintain trover in the case of fixtures which are *attached* to the freehold. Further, until there is some unlawful assumption of the property removed, there is not "conversion"; and consequently no action for conversion can be maintained (see Lee *v.* Risdon, *supra*).

In Colegrave *v.* Dios Santos; (1823) 3 D. & R., 255, a freehold house was sold by auction, and there was no stipulation as to the fixtures not being included or paid for separately. The vendor entered into possession under a conveyance and it was held that all the fixtures (both movable and otherwise) remaining in the house passed to the vendor by the conveyance and were not the subject of trover, since this is maintainable only in respect of personal chattels which have been removed wrongfully.

A tenant may sue in trover for articles which are personal chattels, even though slightly attached to the freehold, if they can be considered unremovable chattels (see Davis *v.* Jones; 1818, 2 B. and Ald. 165). Generally, an outoging tenant has no right to enter premises for the purpose of severing fixtures after the expiration of his term, and the new tenant has possession; though the former may be entitled to sever them during any period in which he is rightly "holding over." Subsequently, he cannot regard them as goods and chattels in an action for trover. For instance, an action for trover was brought against a sheriff for taking fixtures under a writ of *fi fa* (*fi. fa* is a judicial writ of execution whereby one who has recovered judgment for a debt or damages may obtain possession of the personal property of the judgment debtor) at the suit of an execution creditor. The action was brought by certain trustees, who claimed under an assignment made prior to the lessor's re-entry. It was held that the right of the tenant having been determined by his default whilst the articles continued fixed, he could not maintain an action of trover for them after he had forfeited his right to them.

However, no *realty* can be seized under a writ of *fi fa*, therefore such fixtures as would descend to the heir of the judgment debtor would be excluded from its operations; but such fixtures as can, between landlord and tenant, be severed by the tenant as personal chattels can be seized under such a writ; and when the lease

comprises tenants' fixtures these can also be seized. Though an action for trover cannot be maintained for fixtures whilst they are annexed, nevertheless a person who is prevented from exercising his right to sever them may yet maintain an action for wrongful detention against the person in possession (see London and Westminster Loan Co. *v.* Drake, *supra*).

A mere refusal to an outgoing tenant to allow him to remove fixtures will not necessarily amount to conversion; there must be definite evidence of prevention, though the fact that an article has been demanded, and refused, is evidence sufficient to put before a jury.

A landlord is entitled to bring an action for trover against the purchaser of tenants' fixtures separated and sold by the wrongful act of the tenant or his representatives during the term of the lease. In Farrant *v.* Thompson; (1822) 2 D. and R., 1 the owner of a mill demised it to a tenant for a term, and the tenant wrongfully dismantled the machinery of the mill, which was subsequently seized by the sheriff under a writ of *fi fa* and sold under his authority to a bona-fide purchaser. It was held that the landlord might maintain trover against the purchaser even though the tenant's term had not expired. In Hitchman *v.* Walton (*supra*), when a lessee mortgaged his lease and interest in the premises leased, and then became bankrupt it was held that the mortgagee might recover the amount of any damage done to the freehold by the improper removal of fixtures by the assignee of the original lessee, and that the mortgagee was also entitled to recover in trover, against such assignee, the value of all the fixtures, whether landlords' or tenants', which were affixed to the premises before the execution of the mortgage, although there was a covenant in the original lease to the mortgagor, to yield up to the lessor, at the determination of the term "all fixtures and things to the premises belonging or to belong."

THE NEW OPHTHALMIC HOSPITAL.

The Duke of Connaught, on June 30, laid the commemoration stone of the new Royal Westminster Ophthalmic Hospital.

The site is in Broad-street, Bloomsbury, W.C., and its area is four times that of the old hospital in King William-street, Strand, W.C. It will be a building of eight stories, and treatment will be given to 100,000 patients a year.

The Earl of Desart spoke shortly on the needs of the new hospital, arguing that, while the former building in King William-street — which for 95 years of its 110 years' existence had served the public—had met with unqualified success, they hoped that their entry into this new building might be the turning point of their career. They only trusted that they might enter on their new life free from debt.

His Royal Highness then laid the commemoration stone, after which he gave a short account of the hospital's history, of which he had been president for over 20 years. The present hospital was soon to be vacated, and was treating 1,000 patients a week, but there was a long waiting list. This new building had been designed by the architects, Messrs. Adams, Holden & Pearson, and was being carried out by the builders, Messrs. Prestige & Co., Ltd.

Merchandise Marks Enquiries.

The Standing Committee (General Merchandise) appointed by the Board of Trade, will hold at Room 76, New Public Offices, Great George-street, S.W.1, on Monday, July 25, at 10.30 a.m., their enquiry as to whether the following descriptions of imported iron and steel wire products should bear an indication of origin :—Barbed wire on reels; wire nails and wire staples; wire in coil, including strand wire; baling wire cut and looped at one end, or both.

THE "CONCILIATION" AMENDMENT TO THE TRADE UNIONS BILL

At the close of the discussion of the Trade Unions and Trade Disputes Bill in Committee, Sir Leslie Scott, by way of amendment, sought to introduce a new clause and schedule to the Bill which would import a conciliation scheme which, it was stated, was based on the Canadian model which should apply in "essential services," which were defined as meaning any industries, trades, or services essential to the life of the community, viz., coal mining, tranportation, supply of light and power, and water, and any public health service or any other industry, trade, or service, which by reason of real or apprehended national emergency might by Order in Council be declared to be subject to the schedule. It must be obvious that the initiation of any such scheme could not be satisfactorily dealt with as an afterthought to a measure of the kind the Committee were considering, but the Government expressed sympathy with the objects desired and promised an inquiry by a committee.

The schedule which contains the particulars of the scheme was not published in the report of the debate in the *Times*, and as outlined by the mover of the amendment there is not sufficient information to enable us to discuss it at present. As so outlined, the procedure somewhat follows the lines of the Industrial Courts Act here, but with this substantial difference, that there should be statutory power to stop strikes and lockouts during the reference. Here there is no such statutory power, but to quote from Sir William Mackenzie's book on the Practice and Procedure in Industrial Courts, the practice is: "When a dispute is accompanied by a strike or a lockout the Minister as a rule requires that work shall be resumed before the dispute is referred for settlement." The Minister of Labour stated, however, that there was considerable difference in the conditions in Canada and this country, and it did not follow that the same procedure would be applicable in both countries, and even in Canada the obligatory part of the machinery had not been applied The mover of the amendment admitted that he could not suggest that this country was yet ready to accept compulsory arbitration.

It was stated that the schedule to the amendment contained provisions with regard to publicity when a dispute occurred, by a dispassionate statement of the facts by an impartial tribunal. The propaganda introduced by the war has certainly led to a rather undignified position in both national and industrial affairs. As is sometimes the case in family quarrels, both sides seek publicity and support, and the public are indulged in one-sided versions of the dispute, highly coloured, and anything but impartial. The public in a last resort are supposed to judge of the merits of the questions raised between the disputants, but it must be admitted that at present their views are formed according to the opinions of that journal that they are in the habit of reading, and the word "propaganda" has introduced a certain laxity in dealing with facts.

The attitude of some members of the Labour Party appears to have been that it was impossible even to discuss methods of conciliation unless the Bill as to all its other clauses was dropped, but this point of view appears to us rather narrow. We agree that the moving of such an amendment to the Bill did not afford a good opportunity of discussing that amendment; indeed we are somewhat surprised it was not ruled out as introducing matter entirely irrelevant to, and outside the scope of, the Bill, but there is nothing in the Bill itself to interfere with separate legislation forwarding methods of conciliation; on the contrary, the adoption of well-devised methods of conciliation might take all the sting out of the Bill, rendering recourse to some of its provisions unlikely.

NEW BUILDINGS IN LONDON

Bell-lane.—Additions.—Messrs. Hoare & Co., Ltd., brewers, have purchased a site at the corner of Bell-lane, Spitalfields, for extensions to the "Duke of Wellington" public house.

Bethnal Green.—Remodelling.—The London County Council Education Committee have included in the remodelling scheme for Hague-street school the provision of halls.

Finchley. — Enlargement. — A sum of £33,000 is to be spent on the enlargement of Christ's College Finchley.

Hammersmith. — Club. — London County Council recommend that, subject to the consent of the Minister of Health, the site at Old Oak estate be let on building lease to the Suburban Social Clubs, Ltd., for the erection of a club and institute.

Hammersmith. — Premises. — Messrs. J. Lyons and Co., of Cadby Hall, W.6, are to erect new premises in Brook-green. The plans have been approved by the Hammersmith Borough Council.

Hammersmith-road. — Building.—Demolition work is now being carried out by Messrs. Greenham, Ltd., to premises next to St. Paul's School, Hammersmith-road, where a new building is to be erected for Messrs. J. Lyons and Co., Cadby Hall, Kensington.

Hammersmith.—Cinema.—On a site well over an acre in extent, and situate at the roadway end of Fulham Palace-road, is to be built a cinema capable of accommodating about 4,000 persons. The proprietors are Messrs. W. Herbert Percy and T. B. Percy, of 52, Rupert-street, Shaftesbury-avenue, W.1.

Kingston.—Hotel.—Alterations to and the enlargement of the Kingston Hotel, Richmond-road, are being carried out for Messrs. Watney, Combe & Reid. Messrs. Limpus, of Kingston, are the general contractors. Messrs. Young & Co., 6, Queen Anne's-gate, Westminster, are supplying the steelwork. Mr. G. G. Macfarlane, A.R.I.B.A., of Pimlico, S.W., is the architect.

Kingsway.—Subway.—The London County Council are proposing to close the Victoria Embankment and Southampton-row subway, so as to make alterations to accommodate double-deck trams. The work is estimated to cost £326,500.

Peckham.—Rebuilding.—New halls are to be provided in the rebuilding of Hollydale-road school, Peckham, for the London County Council.

St. Pancras.—Factory.—Messrs. Crowe and Careless are the architects for the new factory to be erected on the north side of Gordon House-road, N.W.

St. Pancras.—Nave.—A new nave is to be erected at St. Benet and All Saints' Church, St. Pancras, N.W. The work is estimated to cost £14,000.

Stepney.—Premises.—Messrs. Moore-Smith and Colbeck, architects and surveyors, of 14, Union-court, E.C.2, have received the London County Council sanction for the erection of premises in St. Mark's-street and Trenter-street East.

Vandon-street.—Premises.—Messrs. Searle and Searle, of Paternoster House, E.C.4, are the architects for the new premises to be constructed at 7-13, Vandon-street, S.W.1.

Wandsworth.—Premises.—Permission has been given to Mr. C. S. Banks, architect, Oakfield-road, Croydon, for the erection of four buildings, with one-story projecting shops, upon the site of 66, Allfarthing-lane, Wandsworth.

West Ham.—Offices.—Tenders are being invited for the building of offices, showrooms, workshops in Romford-road, for the Town Council. Plans have been prepared by the Borough Engineer.

West Norwood.—Convenience.—On a site in Robsen-road, West Norwood, the Lambeth Borough Council are to erect an underground convenience to the plans of Mr. Osmond Cattlin, Borough Engineer.

RATES OF WAGES IN THE BUILDING TRADE

(For rates of wages in the Building Trade in Scotland, see page 112.)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place; where quantities, forms of tender, &c., may be obtained.

Following is a list of abbreviations:—Borough Surveyor, B.S.; Borough Engineer, B.E.; District Surveyor D.S.; Clerk, C.; Town Clerk, T.C.; County Engineer, C.E.; County Surveyor, C.S.; County Architect, C.A. Surveyor, S.; Engineer, E.; Borough Architect, B.A.; Architect, A.

Memorial to William Blake.

The memorial to William Blake, which has been placed in the Crypt of St. Paul's Cathedral, was unveiled recently by Lord Crawford and Balcarres.

The proposal to perpetuate the memory of Blake by the erection of a public memorial had its origin in the discovery that the poet was buried in a common grave in Bunhill Fields, with nothing to mark his last resting-place. A committee of men interested in literature and art was formed, and the Dean and Chapter of St. Paul's, on being approached, expressed their agreement with a desire for a memorial in the Cathedral. The memorial, which is a simple mural tablet of stone, with a bas-relief of Blake in profile, was executed by Mr. Henry Poole, A.R.A.

Public Lighting Engineers' Conference: Brighton.

The following letter has been addressed from the Ministry of Health to Mr. W. J. Liberty, Hon. Secretary of the Institution of Public Lighting Engineers. The letter has reference to the expenses of delegates who will attend the annual meeting of the Institution, to be held at Brighton on September 12-15 next. The letter, signed by Mr. E. H. Rhodes, Assistant Secretary, runs:—

"I am directed by the Minister of Health to advert to your letter of the 11th ult. with reference to the question of the payment by local authorities of the expenses of delegates in attending the Annual Meeting and Conference of the Institution of Public Lighting Engineers, to be held at Brighton in September next. He is anxious, however, to avoid the necessity of giving individual sanctions to each authority and would be glad if, in the Circular Letter which the Institution will no doubt issue in the matter, a paragraph is inserted stating that the Minister sanctions under the Local Authorities (Expenses) Act, 1887, the payment of the reasonable expenses incurred in connection with the attendance of two delegates, one of whom should be the engineer or superintendent for public lighting in the district, in the case of any local authority whose accounts are subject to Government audit and who may wish to be represented at the proposed Conference, and intimating that individual applications to the Minister for sanction in respect of the Conference will not be necessary so long as the proposed expenditure is within the limits indicated."

The Preservation of Rural Scotland.

Following upon the formation of a Society for the Preservation of Rural England a similar society was formed in Edinburgh on July 4 at a meeting attended by representatives of numerous national bodies. Sir John Stirling Maxwell presided, and the resolution, proposed by ex-Provost Norval, Dunfermline, to form an Association for the Preservation of Rural Scotland was carried unanimously. It was announced that Lord Crawford and Balcarres had agreed to act as hon. president, Lord Haddington as president, and Sir John Stirling Maxwell as vice-president.

Many societies and institutions already exist to deal with one or other of the many problems affecting the amenities of city and country life, and the new association has been formed in order to co-ordinate their efforts. Its objects are:—

1. To organise concerted action to secure the protection of rural scenery and of the amenities of country towns and villages from disfigurement or injury.

2. To act either directly or through its members as a centre for furnishing or procuring advice and information upon matters affecting the protection of such amenities.

3. To arouse and educate public opinion in order to ensure the promotion of these subjects.

It is not intended that the association shall be merely a negative force. It will be part of its policy to watch town and regional planning schemes in order to encourage local authorities to get them designed on artistic lines and to take the fullest advantage of their powers to protect amenities.

PROPOSED NEW BUILDINGS & OTHER WORKS*

IN these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owners taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. *The information given on this page has been specially compiled for THE BUILDER and is copyright. Our aim in this list is to give, as far as possible, the *average* prices of materials, not necessarily the highest or lowest. Quality and quantity obviously affect prices—a fact which should be remembered by those who make use of this information.

TRADE NEWS

Washable Distempers.

Messrs. Wm. Harland & Sons, Merton, S.W.19, have sent us their new tint card, showing the standard shades of "Harlaqua" washable distempers—a new product. This distemper, when applied to a surface, remains, after repeated washings, in an excellent condition, retaining its fine finish. The card will be sent upon application to the makers.

Archangel Timber Shipments.

We are informed that the Archangel timber shippers have this year departed from the custom which has been established in Archangel ever since the trade began, of marking the goods in hammer mark, and have, instead, marked the cargoes so far shipped with red paint. The buyers have not been consulted with regard to this change, and are finding in some ports a disinclination on the part of their customers to accept the statement that the goods are of genuine Archangel shipment. While we are informed that these goods are genuine, this variation will not, we learn, be repeated for later shipments.

Travelling Exhibit of Radiators.

The Travelling Exhibit of the National Radiator Company, Ltd., fitted with a working installation of the "Ideal" Cookanheat and "Ideal" Classic Radiators, will demonstrate as follows:—July 18 and 19, Station Yard, Chorlton-cum-Hardy; July 20 and 21, in front of Robinsons' Depositories, Market Place, Bury New-road, Higher Broughton; July 20 and 21, adjoining Half-way House Hotel, corner of Middleton and Bury Old Roads, Cheetham Hill.

Midland Bank Ltd.

The directors of the Midland Bank, Ltd, announce an interim dividend for the half-year ended June 30 last at the rate of 18 per cent. per annum less income tax, payable on July 15. The dividend for the corresponding period of 1926 was at the same rate.

THE SCOTTISH BUILDER

GLASGOW SUBURBAN DEVELOPMENT

Negotiations are in progress, it is understood, for the development of a new Glasgow suburb on the estate of Barrachnie, situated between Shettleston and Baillieston. The lay-out plan provides for about 1,400 houses of three, four, and five apartments, together with shops and public buildings, as well as recreation facilities, allotments, and open spaces. Members of the Public Utility Society, which will carry out the undertaking, are to be entitled to occupancy of the houses. The Society, it is stated, is a householders' co-partnership, which excludes middlemen's profits, and enables a house to be secured on economical and satisfactory terms. The architect is Mr. J. Maurice Arthur, Glasgow and Airdrie; the engineer, Mr. J. Gilchrist Bennett, Glasgow; the measurers, Messrs. Matheson & Fraser, Glasgow; the accountant and auditor, Mr. John Duncan, C.A., of Messrs. Thomson, M'Lintock & Co., C.A., Glasgow; and the solicitor, Mr. Gilbert Lang, 180, West Regent-street, Glasgow.

NEW BUILDINGS IN SCOTLAND

Dundee.—Church.—Progress was made by the Housing Committee of the Town Council towards the erection of a parish church at Craigiebank housing scheme. The area of the site is 282 poles, and is triangular in shape in the centre of the scheme.

Cupar.—Home.—The Fife and Kinross District Board of Control has decided to erect an institution at a cost of approximately £30,000. A home is to be provided to accommodate 89 nurses, and six houses for attendants. Mr. A. D. Haxton, Leven, has been appointed architect and surveyor.

Paisley.—Houses.—The Dean of Guild Court has passed the following plans for Messrs. Matthew Lang & Sons, four two-story tenements at Glasgow-road.

Inverness.—Cinema.—The constructional contracts for the new cinema at Forres, Inverness, have now been settled. The architects are Messrs. Carruthers, Ballantyne & Taylor, 28, Queen's-gate.

Glasgow. — Buildings. — The Cambridge Cinema is to be reconstructed and enlarged. Plans have been prepared by Mr. C. J. McNair, architect, 112, Bath-street. The owners are Messrs. Grove Cinema, Ltd., 25, Cartside-street.—A site in Cumberland-road has been secured for a picture theatre. The proposed purchasers are represented by Messrs. Rosslyn, Mitchell & Cochran, 138, West George-street.—Tenders for the building of the super-cinema at Summerfield-street. The architects are Messrs. Gardner & Glen, 164, Bath-street.—The Alhambra Theatre is to be reconstructed and enlarged. Messrs. J. Burnet, Son & Dick, architects, 239, St. Vincent-street, have prepared the plans.

Edinburgh.—Cinema.—Mr. Chas. Mitchell, architect, 2, Randolph-crescent, has received the approval of the Dean of Guild Court for plans for a cinema on a site in High-street.

Stranraer.—Gymnasium.—The Wigtownshire Education Authority has agreed to adopt the recommendation to erect a gymnasium at Stranraer High School.

Edinburgh.—Housing.—The Dean of Guild Court has granted permission to the Corporation to erect 388 houses at Gorgie-road and Saughton-road.

Glasgow.—Houses.—The Dean of Guild Court has passed plans for the erection of 600 Corporation houses.

Glasgow.—Housing.—The Housing Committee recommend the acceptance of tenders for the second section of the Balornock housing scheme, comprising 418 houses. The mason work will involve £60,109; joiner work, £45,433; plaster work, £9,714; slater work, £16,315; glazier work, £1,018; and lath work, £2,097.—Four sites in the Haghill district are recommended to the Corporation as suitable for re-housing purposes.

BUILDING TRADE WAGES IN SCOTLAND.*

The following are the present rates of wages in the building trade in the principal towns of Scotland. Every endeavour is made to ensure accuracy, but we cannot be responsible for errors that may occur:—

	Masons.	Bricklayers.	Carpenters, Joiners.	Plasterers.	Slaters.	Plumbers.	Painters.	Labourers—Masons', Bricklayers', Plasterers'.

ESTIMATING ON RIGHT LINES

Everyone whose business it is to quote for building work should master the principles upon which estimating is based. These principles are clearly explained and illustrated in

'HOW TO ESTIMATE'

by J. T. REA,

a unique and invaluable work which is not excelled in thoroughness or in scope by any similar book known.

Fourth edition (now ready). 540 pages. Price 15s. net (by post 15s. 9d.). Containing thousands of prices and hundreds of examples of analysis, showing how a builder can make up rates for himself. In view of the difficulty of fixing standard prices under present conditions, the author has included an important series of Adaptation Tables and Percentages (corrected to February, 1927), *which show how rates may be adjusted to meet variations at any time.*

Before purchasing any other book on this vitally important subject, you are invited to inspect this—the standard work which is in use by over 30,000 builders.

A Copy will be sent by return, and your Remittance refunded if the Book does : : not satisfy your requirements : :

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXXIII. No 4407. JULY 22, 1927.

RESTORING THE BALANCE

THE Easter and Whitsun holiday week-ends have but shortly passed, and the August Bank holiday week-end will soon be with us to set a fresh stress upon the growing change of popular habit. Every summer week-end, in fact, serves to emphasise the unequal development of modern life, with its sturdy sanity in some directions,and its mad impotence in others. The growth of the motor-car industry seems to be a typical instance of the one, while many of the consequences of its meteoric rise cry out as deplorable instances of the other.

It requires the expert mind of the mechanic and the economist to determine whether the motor industry is in a fundamentally healthy state in itself, or whether, as is so often the case, face values have again deceived. To the outsider it would appear that an industry that can successfully respond to a demand for more and better cars at a price within reach of the average pocket, must be on a sound footing; whereas the mechanic might question whether engine design does not pay too great a respect for the artificial value of taxation based on horse-power, or whether the mass production of cheap cars is a sound economic substitute for a smaller production of more lasting machines. It is not for us to answer such questions as these, though we may pay a tribute to the line of clean beauty which is applied to the average body design of the day, and deduce from this healthy symbol an impression of good sense and efficiency which may underlie the whole movement. It is often an instinct kindled by such manifestations as these which leads to the truth more directly than a mass of calculation and deliberation can effect. The feeling that the hordes of things which disturb the peace of the countryside, and turn its seclusion into pandemonium, are themselves not unlovely things to look upon, is a relief, to say the least of it; and it would seem that what we have lost is not owing to our precocity in one direction so much as to our backwardness in others which should advance with the pioneer.

Bringing car-ownership within reach of the masses has done very much more than multiply the number of car-owners. It has rendered large tracts of country land ripe for building development, now less dependent upon the railway for accessibility. It has called for accommodation for the car in quite small house property, and has actually added eight or ten feet to the frontage of saleable building plots. It has led to the springing up of a vast number of service buildings. Motors, like men, must be fed and doctored, and the village and the long uninhabited stretch of country road must have their garage for repairs and their petrol stations. Roads must cope with the congestion of traffic and certain points freed from conditions which naturally constrict free movement. These are the fruits of the other, and they are considerations of the most paramount importance. We venture to assert that it is a matter of grave concern to the motor industry that greater thought is not applied to these aspects in a general development. Surely the great bulk of traffic on our roads, at any rate during the great national holidays, arises out of the desire of the town-bred man to see more of the beauties of the country. Is it not a bitter jest that the movement that has opened up these possibilities should be so largely responsible for the destruction of much which the town-bred man sets forth to see? Is it not certain, that when the pitch is reached where the motor can respond only to an aimless love of sensation—a craze for speed and change from anywhere to anywhere, then it will no longer appeal to the masses, but only to a neurotic few? Yet this is clearly the direction in which things are tending unless a real effort is made to keep things moving abreast with the pioneer.

It is not unreasonable to expect the man who takes a pride in the appearance and efficiency of his car, to take an equal pride in the appearance and efficiency of his home. Many building developments round about London and elsewhere, however, tell a different story, and it would appear that there are a great number of people who would be ashamed to drive out in a clumsy-looking car, who are willing to live in any monstrosity, provided it has its own garage. And these garages, themselves, are often disgraceful erections, where a five-pound note or two have been grudged by the very men who cheerfully pay twice and thrice as much for some gadget for the car it houses.

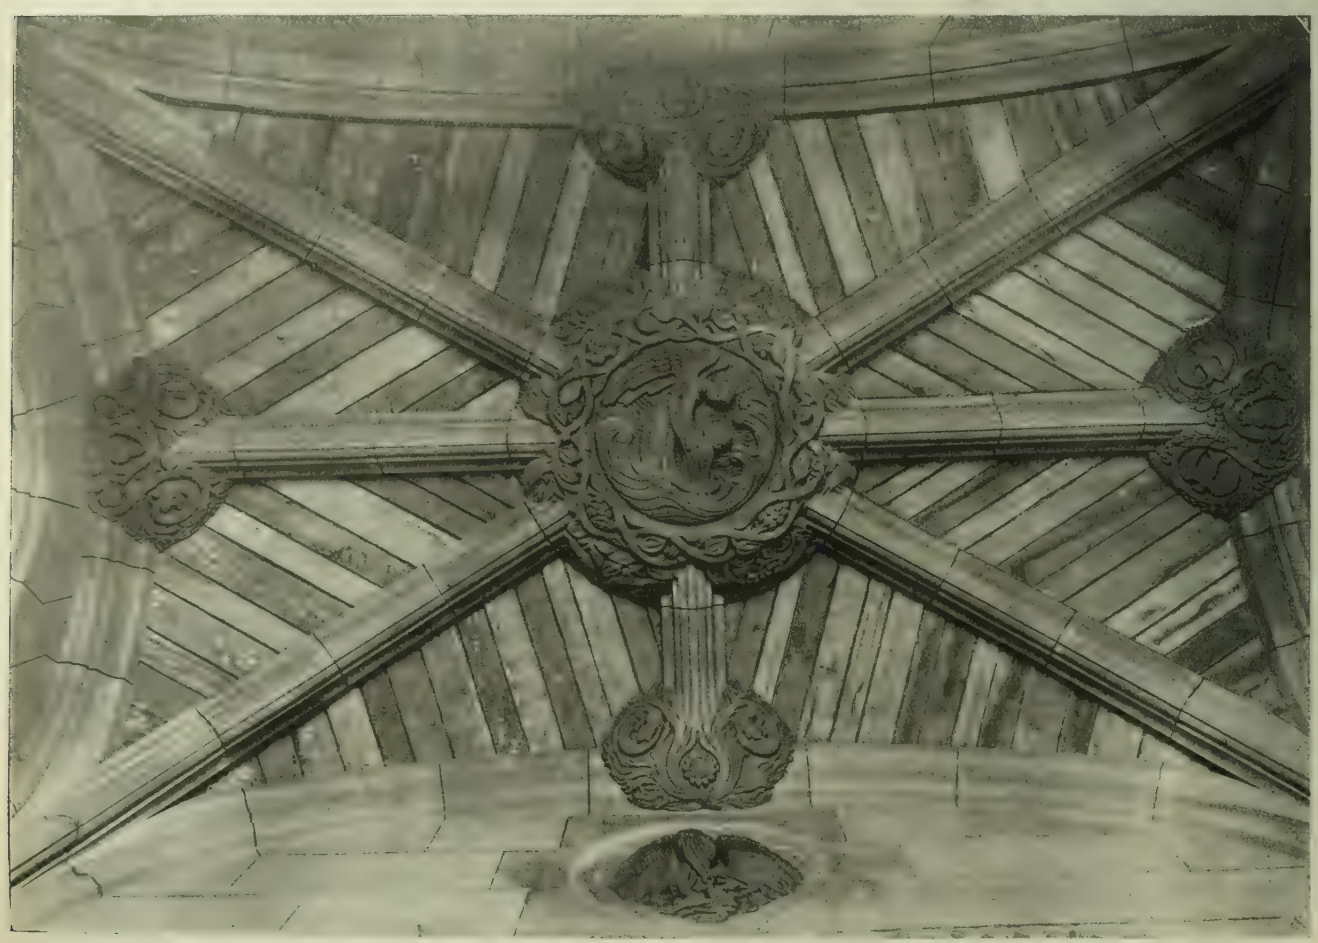
Then there are the wayside garages and petrol stations. It may be that had more capital been sunk in motor premises, we should not be buying efficient two-seaters for £150 to-day; but it is surely patent that within a very few years there will be millions to spend in restoring many of the gim-crack tin huts that claim the pretentious name of garage, and that this expenditure will have to come out of the industry, in some way or other. What effect is this going to have on the price of cars, and the general, even development of the industry?

Finally, there are the new arterial and by-pass roads. The motorist, perhaps rightly, calls for straight roads where things can be seen and avoided; and flat roads that can be covered with a low petrol consumption, and without the annoyance of frequent gear-changing. The authorities have responded by sinking enormous quantities of capital in the acquirement of short cuts, and the forming of cuttings and embankments, and few will claim that the countryside has been thereby improved. This may well be right in principle, but it is certain that there is some sympathetic influence lacking in the work, some directing force to tell us when we should check this barter of beauty for convenience.

This warning of a brooding storm must be taken as no mark of unfriendliness to a gay and vital young industry. It would be foolish and wrong to call upon it to come back and wait for its halting fellows to catch up. Yet its very momentum may be a snare if it is allowed to continue regardless of anything but its own self sufficiency, for that is the straight road to disaster. Much can be done to set a fashion of good taste in the design of motor premises, and particularly as applied to the small private garage. Even the petrol pumps can be arranged in a tolerable manner, as we saw somewhere on the Winchester road, where an orderly rank of these inoffensive machines were painted a subdued blue, with a double white line running smartly through them, and the whole covered with a kind of widened lych gate, with warm red-tiled roof supported on nicely conceived timber work. These sort of things simply advertise efficiency. And let the motor expert realise his responsibility before he disregards too lightly the contours of nature, in the layout of the new roads he demands.

NOTES

The R.I.B.A. London Architecture Medal.



The excellent architectural qualities of the "Friends' House" in Euston-road, of which Mr. Hubert Lidbetter, A.R.I.B.A., is the architect, will be familiar to our readers from the illustrations which we gave in our issue for June 24, and we are glad to note that the R.I.B.A. London Architecture Medal for 1926 has been awarded to this work. In these days, when there is so much meretricious "originality" in our modern buildings, it is a welcome relief to encounter a work of sober dignity such as the Friends' House. The building may not contribute anything particularly new to the resources of architectural design, but it is nevertheless a work of real distinction, and one that is perfectly in keeping with the classical tradition of the Euston-road. The Jury are to be congratulated equally with Mr. Lidbetter upon their award. These honours are apt to fall upon the older school of architects, and when they do they are no doubt entirely deserved; in the present instance, however, we have the pleasure of congratulating one of the younger generation of architects, and upon a distinction that has been thoroughly well earned.

Liverpool Cenotaph.

In reference to the criticism of the action of those architects who are asking for the erection of a model of the proposed Cenotaph that they should have made their protests when the conditions of the competition were first published, it must not be forgotten, a correspondent writes, that "the difficulty of protesting at the time the site was selected was that no one knew until after the competition award the nature and size of the proposed Cenotaph. It was quite possible that a plain obelisk or column at the entrance way would have been selected, and in such a case the same objection as to the offence to St. George's Hall could not have been upheld. In the second place, the competition conditions distinctly stated that the designer had to set aside a definite sum for the purpose of erecting a full-sized model of the selected design. All interested in the matter believed that such a model would be erected and allowed to remain in position for some days or weeks. They felt that whilst not approving of what had been done, it would not be fair to offer any criticism until the model had been erected and inspected, hence the reason (and a very good reason) why no action was taken. Indeed, the architects of Liverpool were strong in their views that until the model was erected, criticism should be withheld. Imagine the disappointment when the model was erected 'so early in the morning,' and removed before an inspection could be made!"

Recognition of the Architect.

It is a matter for regret that in connection with the recent accounts in the lay Press of the opening of the Scottish National War Memorial, there should have been such scant—if, indeed, any—reference to the architect of this fine work, Sir Robert Lorimer, A.R.A. It is, however, not only in connection with this work that we venture to protest, but with regard to many recently executed buildings. The amount of floor space, the future plans of the occupant firm, the cost of the new building—all these points are stressed in the notices, but the architect's name is but rarely given. In view of the great need for educating the public in matters architectural, we could wish that those of our contemporaries who have not in the past done so, would make a point of informing their readers that buildings, in the main, have an architect, and do not spring up of themselves like mushrooms. The phrase "Honour where honour due" has a wider and fuller interpretation than the mere glorification of the architect of a building.

The Scottish National War Memorial: Vault of Entrance Porch.

Sir Robert Lorimer, A.R.A., R.S.A., F.R.I.B.A., Architect.

A Window in the Scottish National War Memorial in S.E. corner of S. Front.

Designed and executed by Mr. Douglas Strachan, H.R.S.A., LL.D.

The Slade Schools. On the occasion of the recent Royal visit to University College, a tour was made of the Slade Schools, which have now been in existence for some fifty years. Alphonse Legros may be said to have inspired the character of the training, since continued, during the long period of his direction of the school, which has had, no doubt, a considerable influence for the good, the Slade school manner having in recent years stood for a certain deftness in draughtmanship. And when we remember the old, slow-coach, stumping and stippling at the antique, formerly so much in evidence, it was a real improvement. Nor can there be any objection felt to the general terms in which Professor Henry Tonks explains the aim of the instruction, which is, "that there is only one course at the Slade, and that is drawing," "based on the traditions of the past and on careful study of nature," although some will think that these factors are a positively disqualifying feature when too rigidly adhered to, and have led to that increase of painters which has not synchronised with the increase of art. Nor do we think that adherence to tradition has always been the most evident feature in the work of old Slade students, but that a rather violent reaction is seen to be the outcome of it. It may be the students' own outlook is rather stampeded by the arbitrary insistence of this one feature of drawing in the "Slade" manner, during his tuition; that the draughtsman submerges the artist. Good drawing is essential, but what we draw, and from whence we draw it, is also to be remembered, seeing that the artist is so rare, and the professional so abundant.

Early English Water Colours. We can always count on some interesting subjects amongst English water colour drawings at the various exhibitions at Walker's Galleries. Amongst drawings at the 23rd annual exhibition there are, perhaps, more that may be called curious or interesting than actually fine, but we note with pleasure the fine breadth in the landscape by F. O. Finch, several good Callows, and a very perfect drawing by W. R. Beverley of the Bird Rock, North Wales. S. Austen, W. W. Deane and J. S. and M. S. Cottman are amongst the contributors of value.

Measured Drawings of St. Paul's Cathedral. In 1920 the R.I.B.A. Measured Drawings Silver Medal was awarded to Mr. Arthur F. E. Poley for his drawings of St. Paul's Cathedral, and since then Mr. Poley has taken advantage, as repairs to the fabric have allowed facilities for the purpose, to complete the survey, and the result of his work is to be published shortly. In addition to an introduction by Sir Reginald Blomfield, R.A., the volume will include several articles and 32 full page collotype and photo-lithographic plates (22 ins. by 15 ins.) each of which has been drawn by the author from his own sketches and measurements. The volume is the outcome of seven years' individual effort, the result of which is a comprehensive survey of the Cathedral in plan, section and elevation, and with exterior and interior perspective views. We have had an opportunity of seeing the whole of the plates, which are remarkable for their accuracy and delicacy, and will, when published, be a worthy record of St. Paul's. We agree with Sir Reginald Blomfield's remarks in the Introduction that Mr. Poley's drawings, representing several years of devoted labour, are worthy of the splendid building which forms their subject. "He has at length done justice to St. Paul's in a series of thirty-two plates which seem to me, in their accuracy and precision of draughtsmanship, quite the best thing of its kind that has been done in this country. . . . His drawings are a welcome return to the fine and scholarly technique of the eighteenth century." The volume, the published price of which will be seven guineas net, is likely to be of considerable value to the student as well as to all those who are interested in beautiful and accurate drawing. It will be printed for the author at Hampton Hall, Middlesex.

The Scottish National War Memorial.

GENERAL NEWS

Professional Announcement.

Messrs. Parker, Pearson and Ross Hooper, chartered civil engineers, of Chippenham, Wilts, have opened a London office at 28, Victoria-street, Westminster, S.W.1. Telephone : 8157 Victoria.

Royal Society of Arts: New Chairman.

Sir Philip Magnus has been elected Chairman of the Council of the Royal Society of Arts for the year 1927-28.

Institution of Electrical Engineers: New Chairman.

Mr. A. Page has been elected President of the Institution of Electrical Engineers for the year 1927-28, and Captain J. M. Donaldson, M.C., vice-president

City's New Open Space.

The required amount, £5,000, having been subscribed, Bridgewater-square, in the City, is preserved for the perpetual use of the public as an open space.

Advertisement Hoardings Banned.

So many Derbyshire beauty spots are being spoiled by advertisement hoardings that the County Council has decided to prohibit the disfiguration of the countryside by this means. Hoardings in existence are to be allowed to remain for five years, but in future no one will be permitted to exhibit an advertisement so as to disfigure or affect rural scenery.

Bloomsbury Site Grant.

Of a total supplementary estimate of £249,080 just presented to Parliament, £212,500 represents the Government's contribution to the University of London towards the acquisition of the Bloomsbury site and the provision of accommodation thereon.

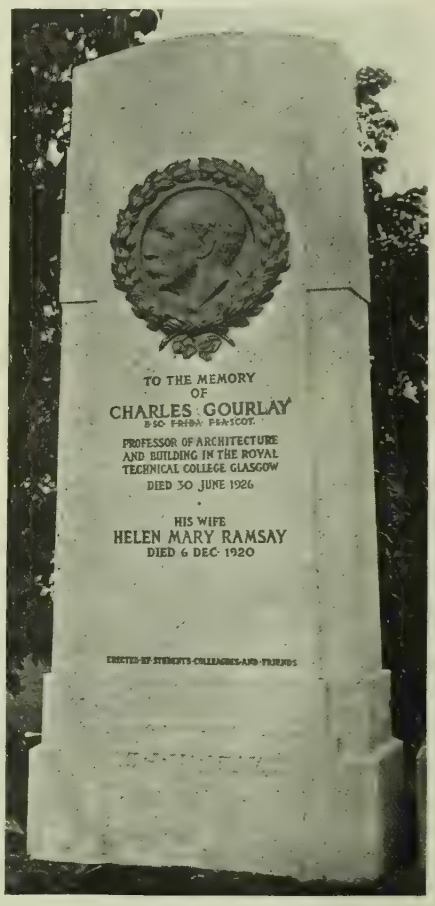
The Terrace, Richmond.

The famous Terrace at Richmond, which commands a magnificent view of the Thames Valley, is to be extended a distance of about 150 feet. This has been made possible by the joint action of the Richmond Borough Council and the British Legion, who have purchased Cardigan House and grounds, which adjoin the Terrace Gardens.

New Thames Lock above Oxford.

At the meeting of the Thames Conservancy Board it was reported that plans had been approved for a new pound lock to replace King's Weir, above Oxford. The lock will be 114 ft. long, 16 ft. 4 in. wide, and 5 ft. 6 in. deep on each sill, and the estimated cost is £10,000. The work is to be proceeded with forthwith.

Dublin Civic Week.



Mr. H. T. O'Rourke, city architect, is in charge of the street decorations, which are to be of a very elaborate nature, for the Dublin Civic Week, September 17 to 23. A town planning exhibition is also being organised, and in order to arouse a greater interest in the civic side of things, arrangements are being made for conducting parties of visitors over the principal municipal departments. A prize for the best building erected during a specified time is to be awarded to remind citizens of the permanence of the ideals of which Civic Week is the expression.

The Rubens Anniversary.

On the occasion of the 350th anniversary of the birth of Rubens, the Municpality of Antwerp is organisng festivities, which will last from July 21, the national fête day, until August 21. These will include an important exhibition of the Flemish master's paintings taken from the various churches and museums throughout the country, and a series of his engravings, etchings, as well as books dealing with his works and the intellectual life of his period. A congress will be held, to which will be invited a number of art experts belonging to various nations.

Town-Planning Institute: Ninth Annual Country Meeting, at Winchester.

The Ninth Annual Country Meeting will be held at Winchester from October 7 to 9, inclusive. The meeting will open on Friday morning, October 7, and members will travel down on Thursday, October 6. A detailed programme will be issued in due course, but most of the time available will be devoted to excursions to places of interest in the neighbourhood. Arrangements have already been made with the Southern Railway for a conducted tour of the docks at Southampton, and with the Director-General of the Ordnance Survey for a visit to the Ordnance Survey Department. Members intending to attend the meeting should make early application to the Secretary, Mr. A. R. Potter, at 11, Arundel-street, W.C. 2.

Professor Charles Gourlay Memorial.

At the unveiling of the memorial stone erected by past students, colleagues, and friends of the late Professor Charles Gourlay, B.Sc., F.R.I.B.A., F.S.A.(Scot.), of which we give an illustration, it was stated that the Memorial Fund Committee had a threefold object in view, and this stone is the first completed part. The second part is the erection of a replica medallion of the head of the late Professor (similar to that upon the stone at Hillfoot) to be erected in the Royal Technical College, Glasgow, on a base of Italian park dove marble, and which may be seen in the corridor of the College adjoining the late Professor's room. The third part of the scheme is the provision of a Scholarship Endowment Fund, which will provide an annual sum as a prize for architecture and building, and the committee appeal for subscriptions to all past students, colleagues, and friends who have not yet had an opportunity to subscribe. Contributions should be forwarded to Mr. James Rodger, Honorary Treasurer, "Professor Gourlay Memorial," The Royal Technical College, Glasgow.

COMPETITION NEWS

COMPETITIONS OPEN.

University Buildings, Western Australia. To cost £150,000. Premiums : £400, £300, £200. Open to British subjects or citizens of U.S.A. Assessors: Professor Leslie Wilkinson, F.R.I.B.A., Mr. A. R. L. Wright, L.R.I.B.A., President Royal Institute of Architects of Western Australia, and Member of University Senate. Apply Agent-General for Western Australia, "Savoy House," 115–116, Strand, London, W.C.2, or Australian Trade Commission, 44, Whitehall-street, New York, U.S.A.	Particulars published in "Builder." Sending in date. Jan. 14 — Aug. 2

Municipal Buildings and Business Premises, Herne Bay.

Designs are invited for the erection of municipal buildings and business premises on a prominent site at Herne Bay. Premiums of £150, £100, and £50 are offered. Professor A. E. Richardson, F.S.A., F.R.I.B.A., is the assessor. Conditions can be obtained from the Clerk to the Council, Westminster Bank House, Herne Bay, on deposit of £1 1s.

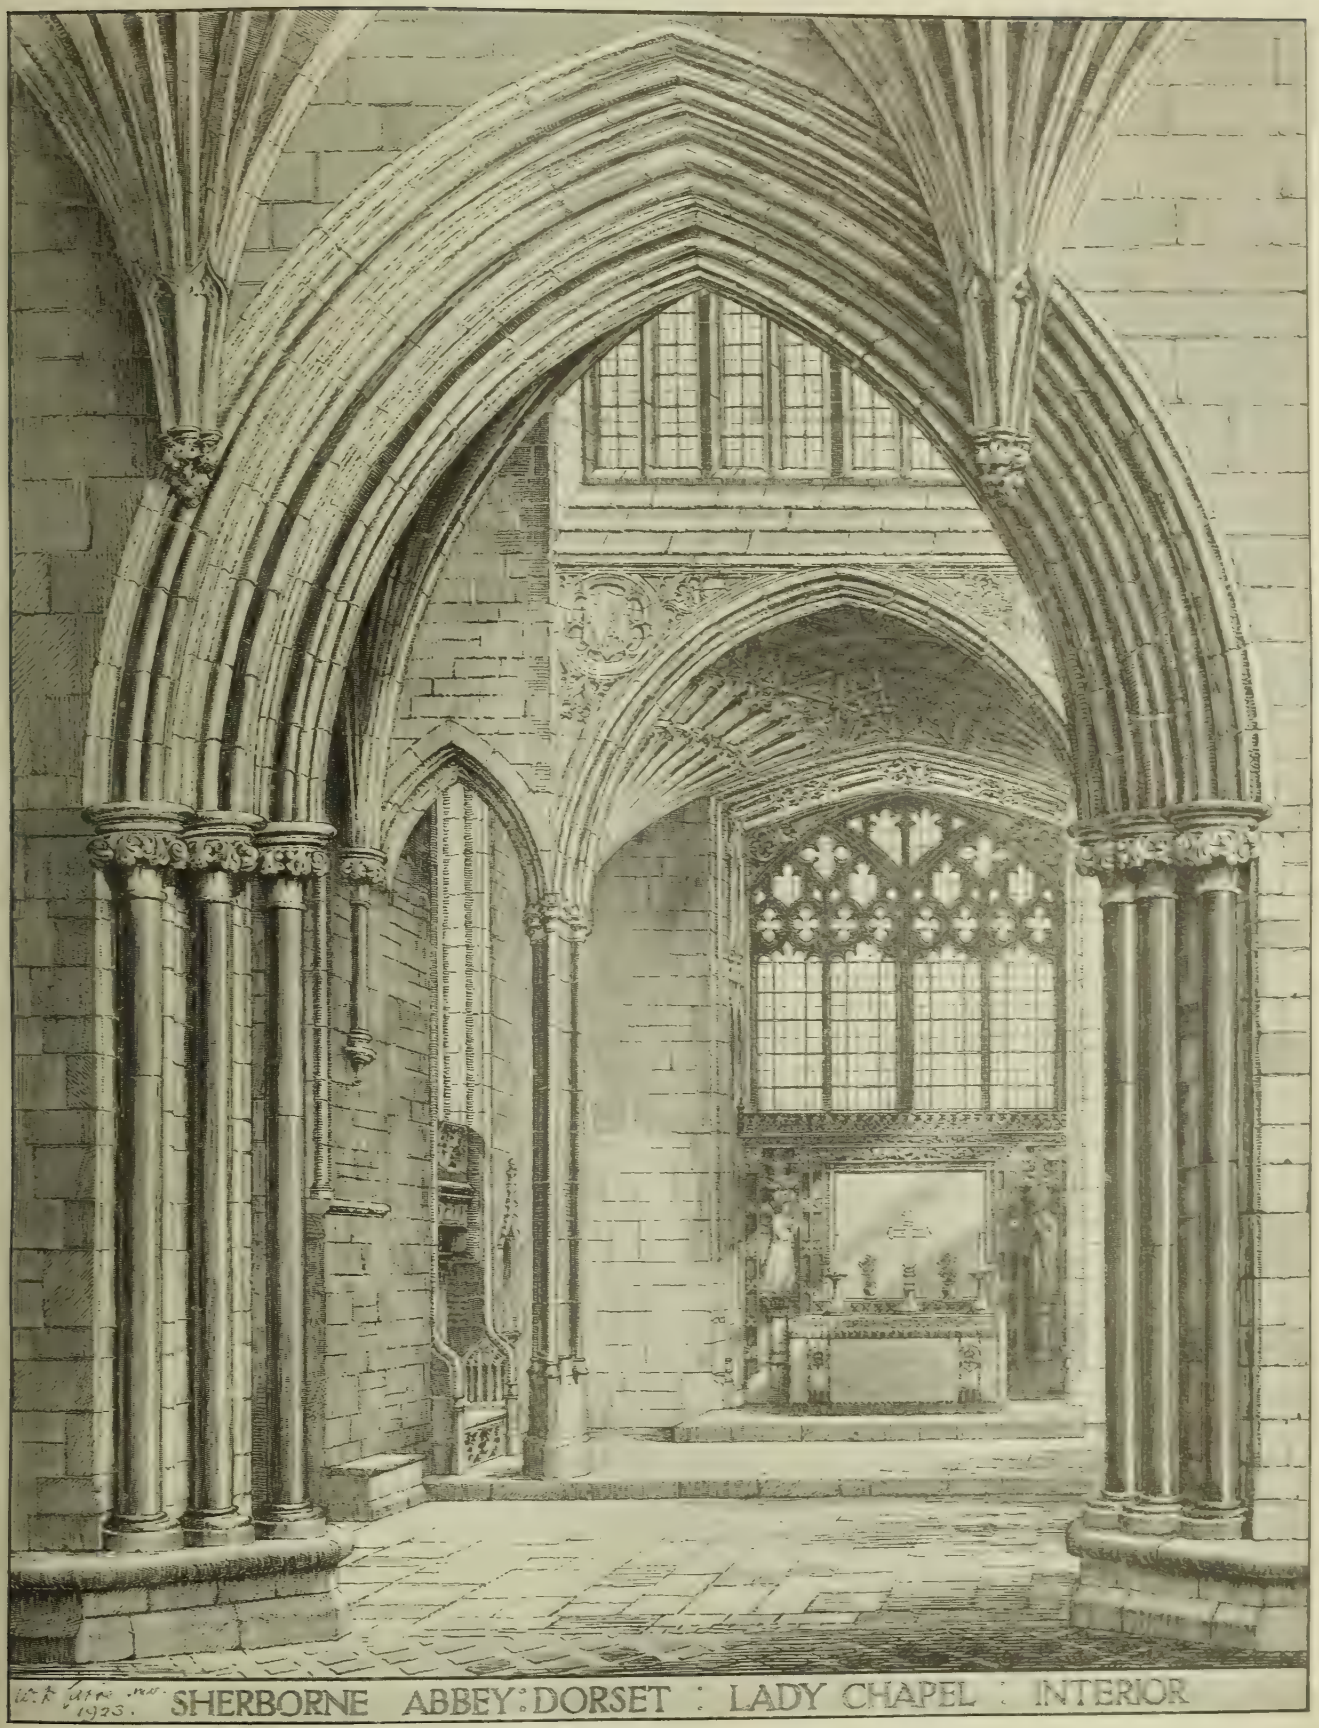
Bradford Grammar School Competition.

Mr. Arnold Mitchell, the assessor in this competition, has made his awards as follows : First, Messrs. Petch and Fermaud, 12, Buckingham Palace-road, London, S.W.1; second, Messrs. Stratton Davis, Yates, Dolman and Rowland V. Taylor, 12, Queen-street, Gloucester; third, Messrs. Cecil A. L. Sutton and George A. Bryan, Albion-chambers, King-street, Nottingham.

The designs are on view in the Cartwright Memorial Hall, Lister Park, Bradford, until Wednesday, July 27, from 10 a.m. to 8 p.m. daily. Eighty-three sets of designs were submitted.

The University of Liverpool: School of Architecture.

The name of the winner of the "White Star" prize was not published in our list of priz winners from this School of Architecture, given in our last issue: he was Mr. R. G. Heal, a fifth-year student.



National Playing Fields Appeal.

This movement, we learn, continues to make splendid progress. It continues to spread in all parts of the country, and many new local associations have sprung up to promote its objects, including Glasgow, Bradford, Wallasey, Chesterfield, Colchester, and Keighley; and Finchley, Chelmsford, and Hammersmith expect to set up their own organisation at an early date. Money and land are still urgently needed to swell the £1,000,000 fund, and donations to the appeal should be sent to Mr. Noel Curtis-Bennett, National Playing Fields Association, 166, Piccadilly, W., or to the Midland Bank, 5, Threadneedle-street, E.C. 2.

Surveyors' Institution Cricket Match.

The following eleven has been selected to play for the Surveyors' Institution against the Auctioneers' and Estate Agents' Institute in the cricket match on Tuesday, July 26 :— Messrs. A. R. Tanner (London), E. B. Gillett (London), R. H. Bancher (London), K. B. Stanley (London), G. E. Gardner (Sussex), W. L. Burt (Sussex), A. W. Turner (Surrey), A. G. Poole (Bedford), L. V. Stone (Kent), J. D. P. Wheatley (London), and F. R. Eiloart (London) (captain).

The match will begin at 11.30 a.m. on the Hampstead Cricket Club ground, which is situated just off Lymington-road, and may be reached by Underground to Finchley-road or West Hampstead stations or by omnibuses Nos. 2, 13, 28, 48 and 53. Tea will be obtainable on the ground, and the presence of members and their friends will be welcome and an encouragement to the teams.

[See article on Sherborne Abbey on p. 133.]

THE SCOTTISH NATIONAL WAR MEMORIAL

OPENING CEREMONY.

"The craving for beauty is imbued with romance; with that high romance which is the essence, the vital impulse, that inheres in all the great works of man in all places and all times, that vibrates in the loftiest thoughts, his heroic deeds, his otherwise inexplicable sacrifices, and which forms the halo of his greatest compassions, and of the tragedy within the depths of his sorrow. So deeply seated, so persistent, so perennial in the heart of humanity is this ineffable presence that, suppress it in us, we decay and die. For man is not born to trouble us sparks fly upwards; he is born to hope and to achieve."—Louis H. Sullivan (American architect).

No record of the Scottish National War Memorial could be complete without a brief account of the magnificent, solemn, and spectacular ceremony of the opening by the Prince of Wales. Not for over a hundred years has the heart of Scotland been stirred as on this occasion. Seen from the centre of the wallhead of the Banqueting Hall the gorgeous and romantic nature of the scene reminded us of the great days of the Renaissance. The guards of honour lined three sides of this historic fifteenth-century square and the continual movement of the groups in front of the south front of the Memorial gave the impression of a life-sized decorative picture painted by the combined brushes of Pietro della Francesca, Ghirlandaio, and Perugino. The vivid gold, red and blue of the venerable heralds who moved about through the groups continually varied the focus and composition of the whole.

The details of the programme have been fully and well described in the daily journals, but what impressed us most was that note of grandeur, dignity, and seemliness which marked the whole proceedings. Britain is indeed fortunate in its Royal House, and the natural unaffected bearing of all this heroic and noble throng, added to the stately and spectacular precision of the troops, made the scene an unforgettable one. It is to be hoped that some young unknown artist with the gift for decorative painting witnessed the spectacle and will be inspired to translate the scene to canvas. We realised particularly how well the great masters of the Umbrian, Florentine, and Milanese schools understood the handling of such subjects. The sense of decorative pattern, of colour contrasts, and of all-overness was so definitely emphasised.

Decorative painting is not merely a matter of figures, landscape, and architecture, but of line pattern and surface. This is where some recent mural paintings fail, and it is to be regretted that professors of art do not advise their pupils to study the works of the great decorative masters of the fifteenth and sixteenth centuries in Italy, and that students awarded scholarships should not be directed to study the works of such men as Benozzo Gozzoli, Botticelli, Perugino and Pietra della Francesco, rather than settle in Paris where they come under the erotic eccentricities of the latest modes in painting. With the great ceremonial of the opening of the Scottish National Memorial and the historic pageant at Craigmillar we may hope to see in the near future a great revival of romantic historic painting in Scotland. Such scenes must reflect on the life and art of a people, and the past week has been truly a great and stirring series of episodes in the history of Scotland.

In the Crown Square, at the opening ceremony, the bravest and noblest in the land were gathered together, and the closing scene when the Royal visitors were grouped round the circular steps of the entrance to the Memorial was a composition worthy of the brush of a Leonardo or Michael Angelo. A photograph of this which we publish gives the fine sense of the balance and grouping, but the colour and glitter in the sunlight could only be depicted by the hand of a great master.

To Mr. J. Wilson Paterson, M.V.O., M.B.E., A.R.I.B.A., Chief Architect to H.M. Office of Works in Scotland; to Mr. Fife his assistant, and others responsible for the arrangements for this wonderful spectacle, the greatest praise is due. Scotland has no need to reproach herself for the manner in which she has honoured her dead heroes. We can all now study the Memorial at our leisure, and it will be long before we can exhaust the riches of its symbolism and allegory. The dead have proved, as stated in the words of the late President Wilson, that "*The right is more precious than Peace*," but let us hope that peace will ever reign within the walls of this noble shrine.

We regret that in our article on the Interior of the Memorial, published last week, Messrs. Singer, of Frome, were given as being the workers of the processional frieze. We understand, however, that the frieze was only cast by Messrs. Singer, being designed by Mr. Meredith Williams, and executed by Mrs. Meredith Williams, who was also responsible for the four angels in bronze on the altar.

Sir Robert Lorimer, A.R.A., R.S.A., F.R.I.B.A., and his partner, Mr. J. S. Matthew, entertained at supper in Edinburgh on Tuesday the artists, sculptors, contractors and workmen who were associated with the work, in celebration of the completion of their labours. The Duke of Atholl, chairman of the Memorial Committee, presided, and among those present were Lord Younger of Leckie, Sir David Cameron, R.A., Mr. Percy Portsmouth, R.S.A., and Captain Campbell Swinton, Lyon King of Arms.

The Duke of Atholl said they were met in a great spirit of thankfulness that their task had been completed, and as chairman of the Memorial Committee he wanted to thank most sincerely Sir Robert Lorimer and every one of them who had helped, for the splendid way in which they had completed their work. From his knowledge of Scotland he knew from the outset that everybody would not be agreed upon any one particular scheme, but when he took over the chairmanship of the committee it was with the intention of seeing carried through a memorial which would be truly Scottish,

MR. THOMAS HADDEN, Craftsman.

carried out by Scottish money, Scottish brains, and Scottish hands. They were fortunate when it came to the question of skill and brains in the highest sense in having as their architect Sir Robert Lorimer.

In reply, Sir Robert Lorimer acknowledged how much the building on the Castle Rock owed to the kindly and helpful advice of many friends, among whom he specially mentioned Sir John Stirling-Maxwell, the late Mr. David Erskine, of Linlathen, Lord Crawford and Balcarres, and Lady Ailsa. The Duke of Atholl's help had been constant and unfailing, and it was his enthusiasm, his vision, his determination not to be beaten, and his never-failing sense of humour that helped them to weather every storm, and to get the work carried through.

Sir David Cameron proposed "Scottish Craftsmanship," and Mrs. Meredith Williams and Mr. Douglas Strachan, H.R.S.A., replied.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

The Liverpool Cenotaph.

From a letter on this subject which has appeared in the *Liverpool Daily Post*, signed "F.R.I.B.A.," we take the following extracts :--

If Mr. Maurice Webb (says the writer) really believes that an attempt is being made by architects to set aside the assessor's award in this competition because a petition has been presented to the Lord Mayor, he has either been sadly misinformed or is in complete ignorance of the real facts. As one of the architects who signed it, I am in a position to inform him that no reference was made either to the competition, the assessor, or the selected design. The petition, in fact, contained nothing more than a request that a full-size model of the design as finally amended should be placed in position upon the plateau in order that its effect upon St. George's Hall could be clearly realised by the public. If this constitutes an attempt to set aside the assessor's award, then, as the president of the R.I.B.A., Mr. Beresford Pite and Professor Richardson have publicly supported our action, Mr. Webb must include them in the indictment. Of the 34 signatories, only six submitted designs in the competition, and further, not one of the 34 have any wish to see Professor Budden supplanted as architect for the memorial. But has it occurred to Mr. Webb that the competition award is, to all intents and purposes, already set aside by reason of the design originally selected for execution having been twice amended and, as far as it is known, twice reduced in size? Those who have signed the petition believe that a model is essential, and even if the committee think otherwise, they surely do not intend to place the memorial in position without giving the public any opportunity of knowing what has been decided upon. . . . The fact cannot be too clearly emphasised that, after all, the cenotaph is a local project and St. George's Hall is a national heritage.

Vibration on Buildings.

SIR,—I see by a report in *The Builder* of the 8th inst. that investigations are being made at the National Physical Laboratory into the effect of "vibrations" on buildings caused by heavy traffic. The subject is a very interesting one and deserves investigation. Some soils, no doubt, counteract vibration to a great extent, such as compact gravel in its natural state; whilst others, having been "made up," would not possess the same resisting power. No doubt, however, the weight of a massive building acting vertically upon a good foundation would reduce the vibration to a negligible quantity. A simple test for vibration is to place a tumbler, or larger vessel, filled with water, on the lowest floor-level of a building whilst traffic is passing, and to watch the "tremulousness" (if any) which takes place, and so form an idea as to whether it should be noticed or not.

ANDREW SOUTH.

South African Theatre Scheme.

A £1,000,000 theatre and super-cinema building scheme, which has been definitely adopted by African Theatres, Ltd., embraces Johannesburg, Cape Town, Durban, Port Elizabeth, Pietermaritzburg, Bloemfontein, and East London. The chairman of the company, Mr. Schlesinger, says the *Daily Mail*, is now on his way to Europe to secure the latest and best designs with the object of making the new theatres and cinemas second to none.

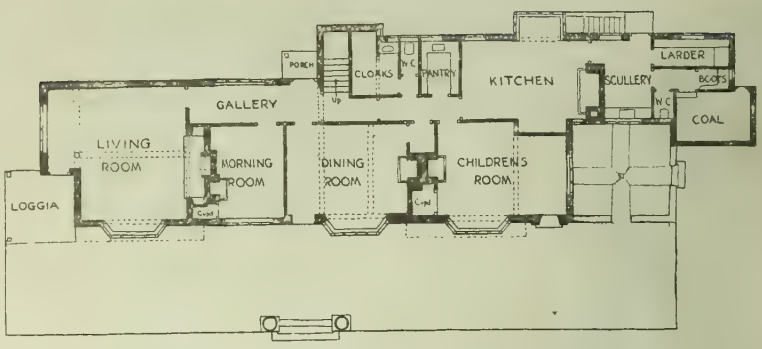
Bedford Grammar School Competition.

We illustrate this week the winning design in this competition, by Messrs. Petch & Fermaud, L. and F.R.I.B.A. The full awards are given under Competition News on page 120.

Sherborne Abbey.

Three new screens have recently been erected in the Abbey Church, one stone screen by the Freemasons of Dorset, and two in oak by the Dorset Regiment and the 6th Battn. Dorset Regiment respectively. The stone screen completes an ancient one at the entrance to the Chapel of St. Mary-le-Bow, lying to the south of the Lady Chapel. The lower part of the screen is *in situ* and dictated the form and detail for the upper part. On shields worked into the tracery are various Masonic insignia, the appropriate coats-of-arms of the Dorset Masonic Lodge, Grand Master and so forth. This work was executed to the architect's design and details by Messrs. Boultons, of Cheltenham, in Ham Hill stone. On the wall adjoining the screen is a memorial inscription with a record of Dorset Masons who fell in the war. Surmounting the base appears the legend

"FIAT LUX ET FACTA EST LUX."



The regimental screens form parclose screens to the Lady Chapel. That to the whole regiment is a memorial to 3,929 comrades who fell in the war. Four shields worked into the uprights bear the badge of the regiment, the Arms of the Abbey, the Arms of Bishop Donaldson and the parent See of Salisbury. In the cresting are the battle honours.

The 6th Battn. screen has the battle honours in the base and bears the Arms of the See of Canterbury, the Abbey, and the Badge of the Dorset Regiment and of its 6th Battn., with appropriate inscriptions in each case. These screens were executed in English oak by Messrs. Dart and Francis, of Crediton.

Mr. W. D. Caröe, F.R.I.B.A., was the architect.

All Saints' Church, New Brighton.

This church is now in course of erection from the designs of Sir Giles Gilbert Scott, R.A., F.R.I.B.A. It takes the place of an iron structure that has done duty for twenty years. The new church, of which the first part to be built comprises the nave and lower portion of the tower, with a large west window facing Hoeside Road, will be constructed of brick with stone mullions, the interior being of stone, with stone pillars, surmounted by a flat timbered roof. The present temporary chancel will be used pending the erection of the second portion of the permanent church. The cost of the new building is estimated at £25,000, the trustees of the estate of Mr. Frederick North having contributed £7,000 towards this sum.

Plan of House at Crockham Hill, Kent.

MESSRS. BAILLIE SCOTT & BERESFORD, Architects.

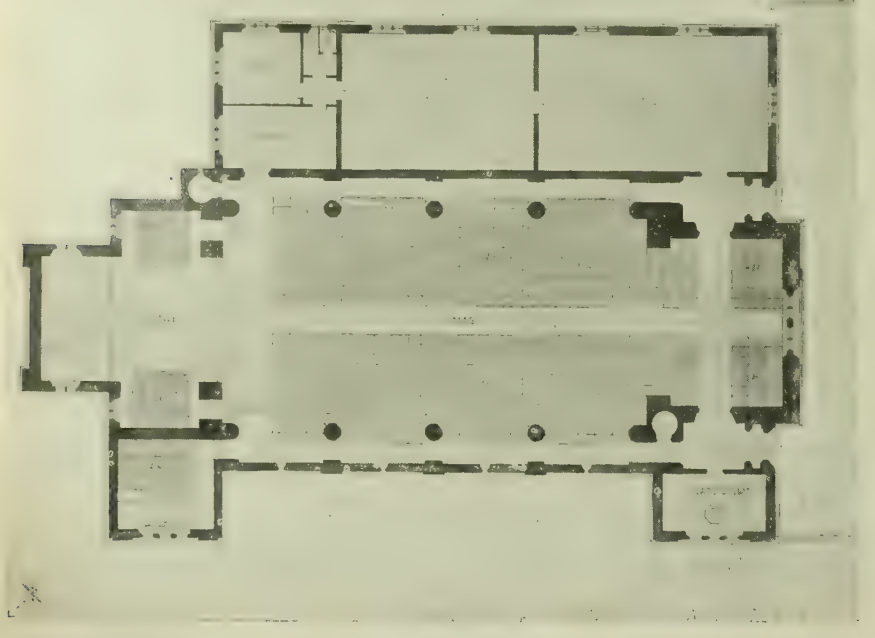
Union Bank of Scotland.

We give this week a view of the exterior of the new Head Office of the Union Bank of Scotland, which has just been completed in Glasgow. Mr. James Miller, A.R.S.A., F.R.I.B.A., is the architect.

Two Houses at Cambridge.

The house named "Dormers" has been erected on Latham-road, Cambridge, and is built with multi-coloured sand-faced bricks, the upper part being in English oak half-timber work, filled in with Dutch bricks and stucco, the roof covered with hand-made sand-faced tiles. The house contains a large entrance hall, drawing-room, dining-room, morning room and study, with the usual offices and servants' hall, bedrooms, dressing-rooms and bathrooms. The general contractors were Messrs. Coulson and Son, Ltd., of Cambridge.

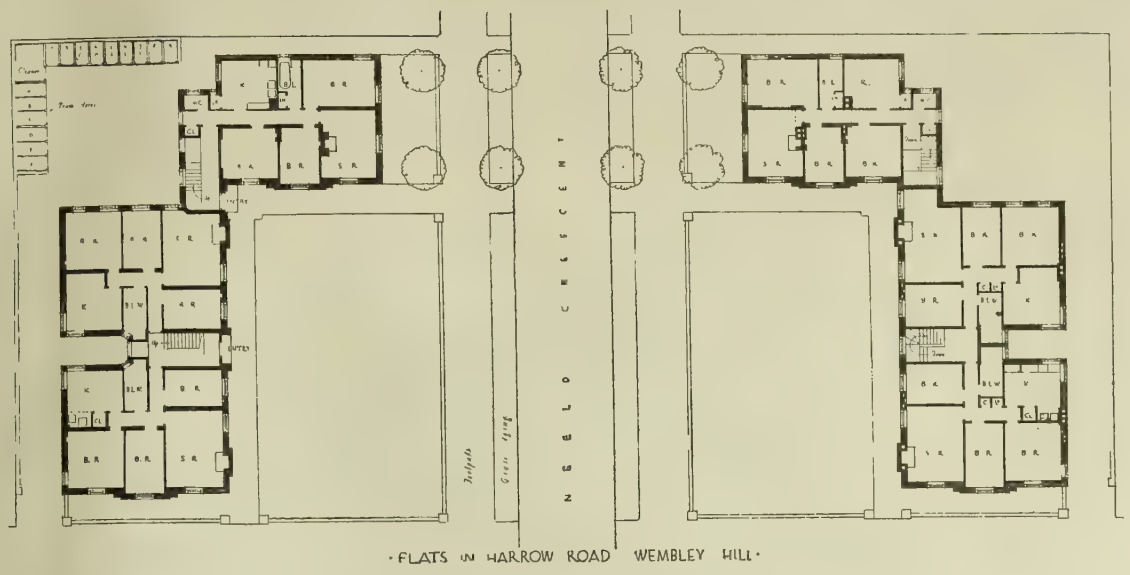
The house named "Hartford" is built on Newton-road, Cambridge, with purple and red mixed sand-faced bricks, the upper part being in English oak half-timber and stucco, and the roof is covered with hand-made sand-faced tiles. The accommodation provided is hall, morning-room, drawing-room, dining-room, with the usual domestic offices, and bedrooms, bathroom, etc. The general contractors were Messrs. A. Negus and Son, of Cambridge. The architect in both cases was Mr. Charles F. Skipper, F.R.I.B.A., of Cambridge.



Flats at Wembley Hill.

These two blocks of flats are built on the corners formed by the junction of Neeld-crescent and Harrow-road. The sympathetic consideration by the local District Council of the architect's proposals with regard to the disposition of air space, which gives the maximum possible in front, secures greater amenity to the occupants, and to the public also. The elevations are built with plain red stocks, the cornice is in bricks 1 in., 2 in. and 3 in. thick, with large quarries to secure overhang, and is covered with Bridgwater "old Roman" tiles. The acroteria terminating central features are in ordinary bricks rough axed to shape.

The general contractors were Messrs. Callow and Wight, of Willesden Green; the iron balustrading to staircases was made by Messrs. Comyn Ching and Co. The architect was Mr. W. Sydie Dakers, one of whose working drawings for the scheme is reproduced.



Shop Premises, Lewisham.

This building, for Messrs. Chiesman Bros., consists of basement, ground, first and second floors, to be used as drapery stores, the second floor to be used as workrooms, store, dining-rooms, and kitchen. Each floor has a clear space of about 15,000 ft. super., with fire-resisting floors and staircases. The building is lighted on the four sides and by three

Plan of Flats at Wembley Hill.

MR. W. SYDIE DAKERS, Architect.

circular glass domes through the centre of the building. Each floor has four available staircases as exits. The elevations are faced with Bath stone, with metal casement frames throughout.

The contractors are Messrs. Thos. H. Sawyer and Sons, of Lewisham, S.E., and Mr. A. E. Thomas, of Wandsworth Common, S.W., is the architect.

A Modern Egyptian Building.

We illustrate this week some general views and details of the Egyptian State Telegraphs and Telephones building, Cairo. Mr. Maurice Lyon, A.R.I.B.A., is the architect.

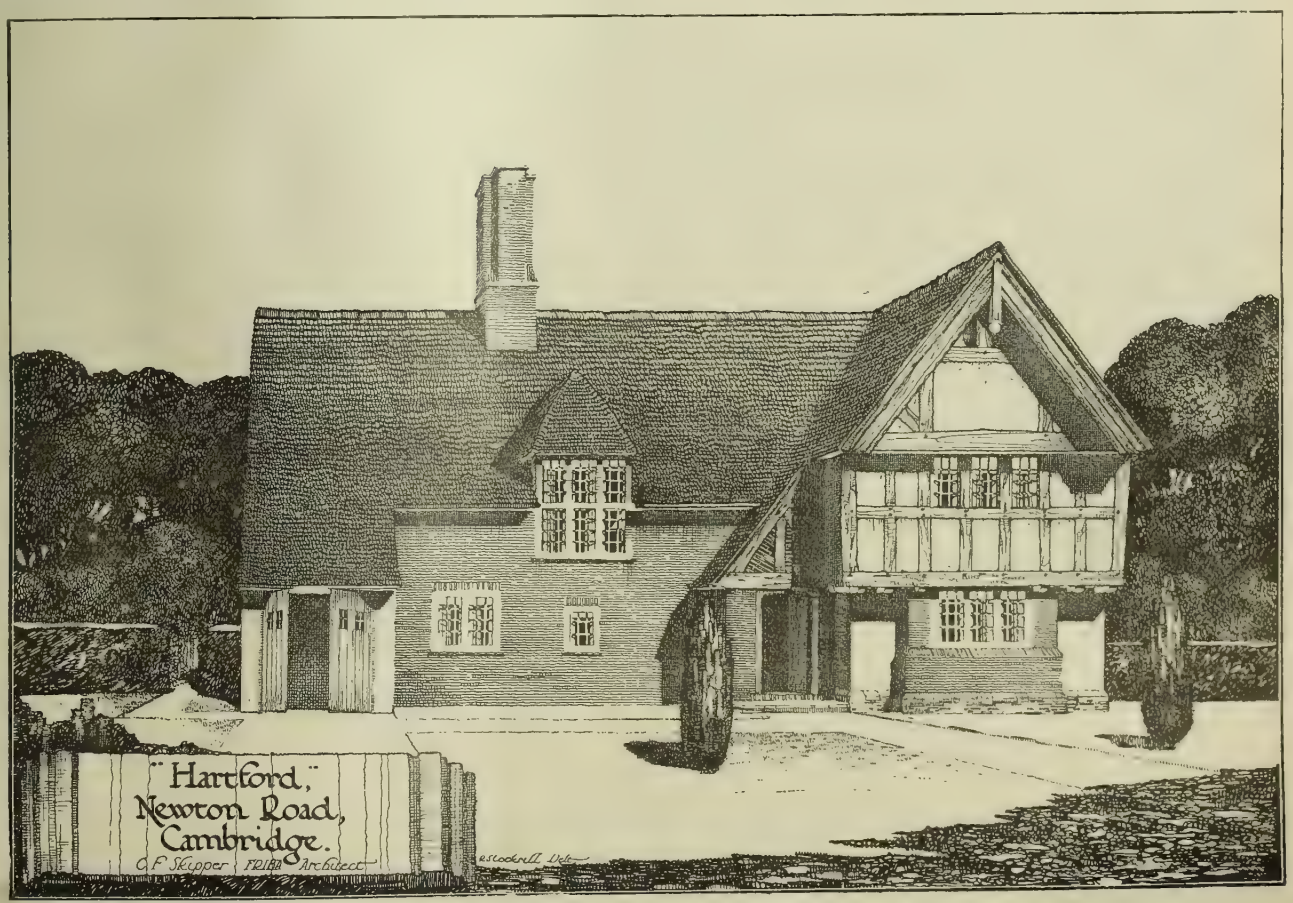
House at Crockham Hill.

This house has been recently built on an exceptionally beautiful site with a fine view to the south. In such a situation it seemed specially desirable to follow the old Kentish tradition of building with hand-made bricks, oak half timber work, and old tiles on the roof, and so maintain the rural character of the surroundings. The contractors for the work were Messrs. G. E. Wallis & Sons, of Maidstone; the heating engineers were Messrs. J. Smith & Son, of Brighton; and the casements and leaded lights were by Messrs. George Wragge.

Messrs. Baillie Scott & Beresford were the architects.

MEETINGS

FRIDAY, *July* 22.



Institution of Municipal and County Engineers.—West Midland district. At the Court House, Jury-street, Warwick. 2.30 p.m.

SATURDAY, JULY 23.

SHERBORNE ABBEY

THE recorded history of the church in Sherborne is spread over a period of twelve hundred and twenty-two years, and in this short article one can dwell but briefly on some of the principal points of interest. The first-known ecclesiastical building was the Cathedral Church of St. Aldhelm, first Bishop of Sherborne, erected between 705 and 709. Of this there remains but a fragment of a doorway. This cathedral was replaced, early in the twelfth century, by the Norman Abbey of that famous builder, Roger of Caen, Bishop of Sarum; the See of Sherborne having been transferred to Old Sarum in 1075, when the cathedral became the Abbey of the Benedictine Monastery which was established at Sherborne in 998.

Additions in the thirteenth century comprised the Lady Chapel of three bays at the east end, and a chapel on the north side of the choir now known as Bishop Roger's Chapel. The fourteenth century saw the building of the cloisters on the north side of the nave, and also the Parish Church of Allhallows at the west end of the Abbey. A great restoration took place in the fifteenth century, when the Norman choir was replaced by one of a magnificent Perpendicular design under the direction of Abbots Brunyng and Bradford, and the latter added the St. Katherine's chapel on the south side of the nave. Later in the century Abbot Peter Ramsam undertook the restoration of the nave, but, following a practice prevalent at that time, he clothed the Norman arcade with Perpendicular work. He then removed the clerestory and triforium, and in their place put large Perpendicular windows, surmounting the whole with a roof of fan-vaulting in stone rivalled only by that of the choir.

A unique feature of the fan-vaulting at Sherborne is the fact that the bounding ribs of the fans do not meet in the centre but are several feet apart, thus giving room for an intricate design of rib work which is lacking in other well-known specimens of fan-vaulting. The choir vaulting has support from flying buttresses, but that of the nave has stood equally well without any such support. The arches of the nave arcade being of varying width, the shafts between the clerestory windows in no case come directly over the corresponding pier beneath.

At the dissolution of the monastery in 1539, the abbey church was purchased by the parishioners, who made it their parish church. The church of Allhallows was then pulled down, but some fragments of arches and shafts still remain, from which we can form some idea of the original dimensions. The Lady Chapel, with two or three fifteenth-century chapels adjoining, shared a different fate. They were acquired in 1560 by the Governors of Sherborne School, a foundation of great antiquity adjoining the abbey. These worthies removed the two easternmost bays of the Lady Chapel and also the original chapel of St. Mary-le-Bow on the south side, and converted the remainder into a dwelling house for the headmaster.

Modern restorations include the nave, transepts, and south porch in 1849-51 under the direction of Mr. R. C. Carpenter; the choir in 1850-53 by Mr. W. Slater; the tower in 1884 by Messrs. R. H. Carpenter and B. Ingelow, and finally the restoration of the Lady Chapel, the first stage of which has recently been completed under the skilful guidance of Mr. W. D. Caröe, the work having been carried out by Messrs. R. G. Spiller, of Sherborne.

The chapel, which has been temporarily fitted for use, has been enriched by gifts of oak screens by the Sherborne Girls' School, the women of Sherborne, the Dorsetshire Regiment, and the 6th battalion of the same; whilst the Freemasons of Dorset have completed an ancient stone screen, the base of which was embedded in the dividing wall of St. Mary-le-Bow chapel. The oak screens are the work of Messrs. Dart and Francis of Crediton, whilst the stone screen was executed by Messrs. R. F. Boulton & Sons, of Cheltenham, Mr. Caröe being responsible for the whole of the designs.

It is intended, as soon as funds permit, to replace the missing second bay of the Lady Chapel by a sanctuary about 15 feet in depth, with east, north, and south windows. No Early English windows remain, but several of the sixteenth-century domestic windows have been cleverly adapted to present needs.

Lack of space makes it impossible even to mention scores of other details, including many interesting discoveries made during the recent restoration; but those who have the opportunity should make a point of spending a day or more at Sherborne, a town which, on a small scale, can hold its own with any of our cathedral cities in points of historical interest.

JOSEPH W. BURT.

LEASEHOLD REFORM

Meeting in Support of the Government's Bill.

A MASS meeting of the Town Tenants' League was held at the Central Hall, Westminster, on Tuesday week last, to protest against the truncation of the Landlord and Tenant (No. 2) Bill. Mr. A. C. Melluish (chairman of the Council of the League) presided, and the following resolution was before the meeting:—

"That this mass meeting of occupiers of business premises, held under the auspices of the Town Tenants' League, thanks His Majesty's Government for the Landlord and Tenant (No. 2) Bill, and in particular the Home Secretary, and all who are trying to expedite its progress through Committee; it strongly condemns the efforts made by some Members of Parliament for the abandonment of Clause 5, containing the vital principle of the right to a new lease in certain cases, and is gratified at the decision that this must remain in the Bill; further, it urges the Government to stop the flagrant obstruction of which the Home Secretary complains, and demands that the measure shall be passed before the prorogation, in accordance with the undertaking given by the Prime Minister. Therefore, this meeting calls upon the Members of both Houses of Parliament to support the Government in the task of placing the Bill upon the Statute book, in such a form as to preserve effectively the principles and objects endorsed upon the Bill itself, namely, payment of compensation for improvements and goodwill, or grant of a new lease in lieu thereof, together with further amendment of the law of landlord and tenant as also proposed in the measure."

The Chairman said the object of the agitation was to get real protection for the town tenant. The League regarded it as vital that a tenant who had faithfully kept his covenant should have the right to a new lease in certain circumstances. Security of tenure on fair terms was more vital than compensation. The Bill now before Parliament was a moderate measure and there must be no further whittling down of its provisions. The protection it would give to town tenants was already given to agricultural ones. There must be legislation to give compensation for improvements and for loss of goodwill, or, as an alternative, continuity of tenure upon fair and reasonable terms.

Lieut.-Col. Sir Godfrey Dalrymple White, Bart., M.P., said there was considerable opposition to the Bill. It was regarded as a Socialist measure, but Lord Curzon had always supported not merely the proposals contained in this Bill, but leasehold enfranchisement, a much bigger thing.

Mr. G. W. H. Jones, M.P., said that all the League asked was that a tenant who had spent money and time in building up a business should have protection against being turned out by a landlord without just cause. He (the speaker) did not think the present Bill went far enough; every tenant who was a good tenant, willing and able to pay the economic value of the property, should have the right to stop on whether the landlord wanted it or not. If the landlord got as much as he could secure on the open market, what did it matter to him whether he received his rent from one tenant or another? What the League wanted was leasehold enfranchisement, so that a tenant should be able to buy out the freehold interest and be secure. The present Bill said that if a landlord refused to renew he should pay a reasonable compensation for improvements in the property so far as those enhanced the letting value of the property; it also provided there should be compensation for goodwill when that goodwill increased the letting value of the property. But the enemy had got an amendment inserted that no tenant should have any right for compensation for goodwill unless he had carried on the business for seven years. This addition to the Bill was to be deplored; a man could work up a business in less than seven years; in fact, if he did not work it up in seven years the chances were that he never would work it up at all. It was to be hoped that an effort would be made on the Report stage to eliminate the seven years' limitation. Another matter was that at the present time when a lease expired a landlord might serve a schedule of dilapidations costing hundreds of pounds. The money had to be paid by the tenant, but the landlord might not spend it on the property; he might pull the property down at once for improvement. Taking money for dilapidations in such circumstances was not business but extortion, and should be stopped. Very often there was a provision in leases that the leaseholder should not assign without the consent of the landlord. If the present Bill became law, every tenant would be able to assign unless the landlord could show there was good reason why he should not.

Dr. Hugh Dalton, M.A., M.P., said it was to be hoped that a future Government would go farther than this Bill. For instance, the right of the tenant to compensation for improvements should not be limited to those made after the introduction of the Bill; the fact that the tenant was not entitled to compensation for any improvement made before the Bill became law was a very serious limitation on the Bill. There had been a Town Tenants' Act in Ireland for twenty years; it was high time that we in this country followed in Ireland's track.

Alderman Sir William Perring, J.P., M.P., who moved the resolution, said that one of the flaws of the Bill was that it only provided for one renewal of a lease or compensation—a tenant could come up a second time for compensation, but only once for renewal. It was sincerely to be hoped that before the Bill passed into law the tenant would have the right to renew again and again, provided he was ready to pay the higher rent which the landlord was entitled to expect.

Major H. E. Crawfurd, M.P., who seconded the resolution, said that when a man had worked or lived in a place for a number of years and his health, wealth or happiness were wrapped up in that place, it should be recognised that he had established a claim to remain in that place almost as powerful as the claim of the landlord to retain control of the place, but a little less powerful than the claim of the community to see that the place was worked in the best possible way.

Mr. W. J. Womersley, J.P., M.P., said there was a difference of opinion as to whether traders who had not long leases, some of whom had not even yearly tenancies, would share in the benefits of the Bill if it became law in its present form; and he had put down an amendment that a man who had perhaps only a quarterly tenancy, if he had carried on business for seven years, was entitled to reasonable compensation for improvements and goodwill, and for a renewal of his tenancy.

Capt. G. M. Garro-Jones, M.P., also supported the resolution.

Mr Patrick Howling (hon. secretary of the Town Tenants' League) said he had received a mass of telegrams and letters expressing a desire for the success of the League's efforts.

The resolution was carried.

SOCIETIES AND INSTITUTIONS

ROYAL INSTITUTE OF BRITISH ARCHITECTS

Grissell Prize, 1927-1928.

The Jury for the Grissell Prize have received certain questions from an intending competitor for the Prize. These questions, together with the answers made by the Jury, are given below for the information of any other competitors :—

Question.

1. "The four angles to be rounded to a radius of 20 feet." Must the frontage of the building be so rounded or could any other angle treatment be adopted?

2. "Shopping space . . . on ground floor over whole area of site." What about goods department?

3. "Internal galleries for lighting purposes," and later under drawings required "Ground-floor plan indicating by dotted lines first-floor gallery." Does this mean lighting *areas* on the second and third floors or does it mean that the first, second, and third floors should have an internal well or wells with light in the roof over, *i.e.*, the ground floor carried up through the first floor or through all the other floors?

4. "Shop windows to surround the site." Does this preclude solid piers or must the upper part of the building "stand on glass"?

5. "The building is to be . . . of fireproof construction throughout." Does this mean that merely the materials should be fire-resisting and/or that the building should be planned so as to localise outbreaks of fire? The latter would be impossible in the event of the galleries running the full height.

Answer.

The angle of the building must be rounded to a radius of 20 feet to conform with certain regulations made in 1925 in connection with the lay-out of main thoroughfares. Any other angle treatment arranged must fall within the quadrant of 20 feet circle, but in this case must obviously involve sacrifice of site area and would probably be against the wishes of a business client.

The shop space must occupy the whole of the ground floor not required by staircases, lifts, dispatch office, or goods entrance. There should be no actual goods department on the ground floor.

The complete building has to be roofed at the level of the ceiling of the topmost floor at which point it will have glazed lights. The first, second, and third floors will, therefore, be arranged as galleries, light passing from the glazed lantern at the top of the building through each floor to the ground floor which covers the site.

Piers may be introduced on the external elevation of the ground floor, but must be strictly limited in area and must take serious account of the demand of the trader for extensive glass area.

It may be assumed that the local authority will accept fire risk of the building without party-walls and that the term "Fire-proof construction throughout" refers to the materials.

Conference with Teachers of Building.

On Tuesday, July 26, at 2.30 p.m., in the R.I.B.A. Galleries, the Schools Committee of the Board of Architectural Education will hold a conference with the representative teachers of building who are in London on a course arranged by the Board of Education. A paper will be read on the subject of "Instruction in the Application of Science to Building Construction" by Dr. R. E. Stradling, Director of Building Research, Department of Scientific and Industrial Research. A discussion will follow. There will be an exhibition of architects' working drawings in the Galleries.

The 11th International Congress of Architects.

At a recent meeting of the permanent committee of the International Congress of Architects, held in Paris, it was decided to hold the Eleventh International Congress in Amsterdam and The Hague from August 29th to September 4th. This will be the first regular International Congress of Architects held since the war. The architects of the Netherlands have long desired this meeting and are exerting every effort to make it a notable gathering. Five of the subjects thus far decided upon for discussion are.—

1. International Competitions.
2. Legal Protection of the Title of Architect.
3. Architectural Copyright.
4. Architecture as Practised by the Architect and by the Architect-Builder.
5. Artistic Development of Architecture since 1900.

Those expecting to be present will kindly communicate with the secretary of the British Section, Lt.-Col. H. P. Cart de Lafontaine, A.R.I.B.A.

BRISTOL SCHOOL OF ARCHITECTURE.

There was a good company present at the annual exhibition and prize-giving in connection with the R.W.A. School of Architecture, which was held at the Royal West of England Academy last week. Mr. C. F. W. Dening, R.W.A., F.R.I.B.A., President of the Bristol Society of Architects, who presided, said the work of the past year had been infinitely superior to that of the previous year. The school had become an essential factor in the training of architects. The death-knell had been rung on the old-fashioned system of training, and they had got as near the ideal system of education with part-time in the school and part-time in the office—the dual system. The Chairman paid a tribute to the work of the headmaster, Mr. Gordon Hake, and said that if the school was to make still further progress and the number of students increased, it would be necessary to obtain other premises where the school could have the fullest opportunities of developing its work.

Mr. Gordon Hake, in giving the annual report of the school, said the number of students was 25, the largest since the school commenced in 1922, and the standard of work reached was high. He thanked the hon. secretary, Mr. Eustace H. Button, and the students for their loyal co-operation during the year.

Mr. J. E. Barton, headmaster of the Bristol Grammar School, in moving a vote of thanks to Mrs. Richardson, who presented the prizes, said what they were most concerned with in architecture in the past was producing something absolutely right for its purpose, the purpose of expressing in some vivid form their own consciousness of the high ideals that filled them.

The following were the prize-winners :— Dame Janet Stoncomb Wills Travelling Studentship, value £25, R. Newman; the Savory Design Medal, R. S. Redwood; Architectural Association Design Prize, value £5 5s., A. E. Barrington, A. P. Mackness (prox. acc.); R.W.A. Silver Medal and B.S.A. prize of £3 3s., B. I. Day, F. S. Wilbond (prox. acc.); R.W.A. Bronze Medal and B.S.A. prize of £2 2s., D. A. Thuell, N. P. Hartland Thomas (prox. acc.); Headmaster's prize, value £2 2s., for the most marked progress, A. R. Mackness.

THE FACULTY OF ARCHITECTS AND SURVEYORS.

The annual general meeting of the Faculty of Architects and Surveyors was held at the Memorial Hall, Farringdon-street, E.C. 4, on July 13 inst., the President (Col. H. J. Duncan-Teape) being in the chair.

The accounts and auditors' report for the year ended May 31, 1927, were adopted unanimously. The report of the Executive Council showed that the membership on May 31, 1927, was 512.

The steps taken by the Faculty in connection with the proposed statutory registration of architects were outlined.

The system of tuition and examinations to be adopted by the Faculty were explained to the meeting, and it was stated that it was hoped to make the system of entrance by examination compulsory as soon as the Faculty was sufficiently well established.

The Council expressed its appreciation of the voluntary services which had been rendered in the organisation of the Faculty by its first officials and by the first President (Col. H. J. Duncan-Teape), and Vice-President (Mr. Langford Moyle).

Northern Architectural Association.

At the annual meeting of the Cumberland branch of the Northern Architectural Association, Mr. T. Taylor Scott, F.R.I.B.A., was elected chairman, and Mr. J. H. Martindale, F.S.A., F.R.I.B.A., of Carlisle, and Mr. A. Huddart, of Whitehaven, were appointed vice-chairmen. Members appointed to the executive committee were Messrs. H. Oldfield, R. Morton Rigg, J. Foxall, J. Slack and H. E. Ayris (hon. secretary and treasurer).

The Institute of Fuel.

The final act of the inauguration of "The Institute of Fuel" was performed in London on July 5, when the requisite resolutions were passed by members of the Institution of Fuel Technology, the members of the Institution of Fuel Economy Engineers having previously passed the necessary resolutions for the merging of the two Institutions. The "Institute of Fuel" is, therefore, now formally launched, and the Council, consisting of prominent leaders on both the scientific and industrial sides, is now actively engaged in organising the work of the Institute.

Sir Alfred Mond, Bart., P.C., M.P., is the first President of the Institute. The Secretary will be pleased to forward particulars to all those interested in the fuel question, on application to the Institute of Fuel, 202, Abbey House, Westminster, London, S.W.1.

New Cinema Safeguards.

Stricter regulations to guard against the danger of fire are to be imposed on London cinemas by the L.C.C. At present cinematograph halls and small concert halls are permitted to use wood in the roofs, but the Theatres and Music Halls Committee recommends that this concession shall be withdrawn except for cinematograph halls accommodating not more than 500 people. "The modern tendency," the committee points out, "is to erect cinematograph halls with balconies to accommodate from 1,000 to 3,000 persons and to provide an entertainment more or less comparable with that given in theatres and music halls. There does not, therefore, appear to be sufficient justification for continuing the exemption from the requirement for a roof of fire-resisting construction"

THE ROYAL SANITARY INSTITUTE

The Thirty-eighth Congress of the Royal Sanitary Congress, held at Hastings, was continued on Thursday, July 14, when the Engineering and Architecture Section opened a conference in the Town Hall, under the presidency of Mr. H. D. Searles-Wood, F.R.I.B.A.

PRESIDENTIAL ADDRESS.

Mr. Searles-Wood, in the course of his presidential address, said, speaking with reference to the scheme for the development of the East Kent coalfields, that the new town which was growing up about half a mile from Snowdown colliery, which itself was a few miles north-west of Dover, was the first important housing scheme produced in the development of the East Kent coalfield. This pit, newly developed, was already employing a large number of men who had chiefly moved into the district from other coalfields; some of them lived at Nonnington, a small but pretty village a mile from the pit, some at Woolage, a hamlet on the other side; but the majority lived in Dover and travelled by train to work. These workers were to form the new community at Aylesham and to give a start to the new fashion in industrial houses. The town was being built in a wide, shallow valley, with a boulevard 100 ft. wide; at the lower end of the boulevard would be the railway station on the line between Dover and Canterbury. Further up the valley the boulevard would open out into a central market place and shopping centre, where an hotel would be built, and ultimately there would be churches and schools and the usual public buildings. The drainage question had been extremely difficult, originally it was intended to have a disposal plant, the purified effluent to be discharged on the chalk, but Margate, which drew its water supply from wells and adits in the neighbourhood, objected, and a trunk sewer was to be constructed for a distance of 3 miles to discharge into the Stour. The bricks and tiles had been imported from abroad to a place which produced the finest bricks and tiles in the world.

The principal event in the engineering world, continued the President, was the publication of the Report of the Royal Commission on Cross-River Traffic in London. This Commission was the outcome of the controversy in the possibility of saving Waterloo Bridge as an architectural masterpiece. It was three years since this controversy was first raised on the subject of Waterloo Bridge. In October, 1923, a serious movement in No. 4 pier, counting from the Lambeth pier, was noticed, and the extent of the settlement became such that in November of that year an attempt was made to arrest the settlement of the pier by injecting cement into the gravel underlying the masonry. In spite of this treatment, or probably as a result of it, the subsidence continued at an increasing rate until May, 1924, when the bridge was temporarily closed to traffic, the roadway lightened, and arches Nos. 4 and 5 supported by wooden centering. As a result of these remedial measures the settlement was checked, and no appreciable movement had since taken place, in spite of the fact that the bridge was reopened for restricted use in July, 1924.

The Commission was called upon to decide two questions. In the first place, was it necessary to take down and rebuild the bridge in order to render it serviceable for the future, and if not, what was the alternative; and secondly, was the bridge, with its present width of roadway, capable of playing its proper part in relation to the adjacent bridges, actual or projected, in the cross-river requirements of the central area of London? In answer to the formal questions addressed to him by the Commission, Sir Alexander Gibb, K.B.E., C.B., gave it as his opinion that (i) the existing bridge should not be demolished; (ii) piers Nos. 3, 4, 5 and 6, and the arches supported by them, should be taken down and rebuilt; (iii) the remaining piers which are not to be taken down should be supplied with new foundations by underpinning, if it should be established in each case, after further examination, that this course is really essential, and that such underpinning should be conducted by the "free air," open coffer-dam method, and (iv) the foundations in all cases should be carried down to a depth of 35 ft. below Ordnance Datum, and, further, he made the important pronouncement that, in his view, the restoration of the bridge by the method recommended above would be less costly and take less time than a complete process of taking down and rebuilding, and could be carried out without serious interference to navigation.

The Commission, however, while arriving at conclusions on the technical aspect of the question, which seemed in the main to support those previously arrived at by the Conference of Societies, yet made a concession to the London County Council, inasmuch as they suggested that the roadway of the bridge should be widened to accommodate four lines of vehicular traffic. To effect the required alteration, it was proposed to take down the balustrade, cornice and frieze between the piers, and the cornice of the piers, and form a new cornice with mutules as in the old cornice, but differently spaced. This cornice stone would need to be of sufficient depth back to front to give counterpoise to the overhang, and to admit of its being well tied down at the back to prevent its overbalancing under the weight of the balustrade. It was anticipated that the proposed alteration would not diminish the monumental value of the design (a similar treatment was applied to London Bridge some years ago). Thus it appeared that one of the greatest works of structural engneering which the last century produced had been given a new lease of life.

Modern Bathroom Accommodation in Hotels and its Limitation under the Public Health Act.

Mr. Stanley Hamp, F.R.I.B.A., then read a paper on this subject, in the course of which he said that it would be common knowledge to all that the by-laws of this country forbade the placing of any water-closet within a building, unless it adjoined an external wall which "shall abut immediately upon a street, or upon a yard, garden, or open space of not less than 100 square feet in area. Architects, therefore, were unable to plan any building except in accordance with such a regulation, without special consent. Such a regulation precluded possibility of adopting in this country an arrangement for the internal w.c. upon the lines almost universally practised now on the Continent and in the United States. This was a very serious handicap to the successful development of buildings of the hotel and residential flat class. Apart from the loss to the general public, which was, having regard to present-day demands, a serious one, it was even more important to the building owner in considering the financial aspect of his building.

Although he did not pretend to have the expert knowledge in sanitary science as had his audience, at the same time he had had the advantage of ascertaining the views on the subject from the most up-to-date and learned scientists, and he could not help feeling that the by-law dealing with the internal w.c. when it was first made was a valuable and necessary law. There was no real justification, however, for continuing such a restriction in view of the great advance that had been made in artificial ventilation, so common now in all important buildings. Before the mechanical system of ventilation was scientifically developed and introduced into buildings, by which fresh air was brought into the room and the foul air was extracted, it was quite obvious that any apartment containing a w.c. apparatus should of itself have direct ventilation to the outer air and at a time when it was almost common practice on the Continent to place these fittings in any odd position within the building without any direct ventilation, it was necessary that we in this country should define clearly what in the interests of public health should prevail. With that view, said the lecturer, he was entirely in agreement; at the present day, however, conditions had changed, and whereas the law then made was arbitrary and a logical development, our Continental brethren had obtained perhaps a more strictly scientific result by rather more latitude than was allowed here. The curious fact remained that, whereas in the past we had certainly led among all nations in our sanitary provisions, our position now was such that our very restrictions stood in the way of scientific progress.

Let it for a moment be assumed, said the lecturer, that we had two buildings, one planned to comply with our present-day regulations, the other planned on the Continental and American practice. *A* illustrated what we could do, *B* illustrated what was possible abroad. In *A* we had w.c. apartments opening on to an internal area (100 sq. ft. in area); this area could have 14 w.c.s opening on to it, and the building could be ten floors high. Such an area virtually became purely a ventilation duct open at the top with no certainty of draught to guarantee its usefulness. Under these conditions, he claimed was probable, and could be demonstrated, that at certain times of the year it was made possible by the varying internal and external temperatures, that the windows opening into this duct might, in point of fact, become inlets and not outlets, with the obvious result that the foul air instead of passing out of the chamber would be drawn within the building, and vitiate the air of the rooms in the immediate vicinity. Such a result would obviously be absolutely the reverse of what was intended, and would be condemned as being insanitary. In comparison, we could take scheme "B." Here these fittings abutted upon very much smaller ducts, which, in fact, were intakes for fresh air and extracts for foul air. These air vents could be designed completely to change the air of the chamber six or even more times per hour. By means of the modern ventilating plant this could definitely be assured and was scientifically more certain in effect than conditions prevailing in scheme "A." He was aware that it was sometimes said that the only drawbacks to such a system were that the apparatus might get out of use or be neglected, with evil consequences. The same criticism of many other similar conditions might be made where a mechanical device was adopted, and if that was sufficient to condemn in this case, it should equally apply elsewhere, but necessity had not made this necessary.

In considering the merits of either arrangement, he would take it for granted the installation itself, that was, the plumbing work, and the fittings were sound in both cases. The result of the comparison, he claimed, showed that whereas in scheme "A" the hygienic condition could be injurious to persons living in the vicinity of the w.c. apartment, and the danger could not be avoided by any available means, in scheme "B" the injurious conditions could never prevail unless there was a stoppage of the mechanical ventilation system, which could be known and remedied. It would be quite possible to instal duplicate ventilation fans, although he did not believe it had been found necessary where this system was employed.

Mr. Hamp then proposed the following resolution:—That the Public Health Act be amended to admit of the internal w.c. apartments where adequate mechanical means of ventilation is adopted, to the approval of the Local Authority, and that the Council of the Royal Sanitary Institute be recommended to forward this resolution to the London County Council.

After considerable discussion, however, the resolution was not carried.

Mr. Kenneth M. B. Cross then read a paper on

"Public Baths and Their Future Development."

The "lay-out," said the lecturer, of a typical modern public baths establishment comprised a two- or three-storied brick or stone building, fronting the principal street, and containing on the ground floor the principal entrance, and on the upper floors a few small rooms for residential or administrative purposes, the whole forming an architectural screen to the large shed-like erections of the swimming baths proper. These were generally bounded on their remaining three sides by adjoining houses, and did not present those architectural possibilities to the designer that would obtain in the case of a town hall or art gallery upon an open site. In regard to the construction of the bath tank, when it was remembered that in the building of swimming ponds constructed as recently as fifteen or twenty years ago it was necessary to build the walls in brickwork about 2 ft. 3 in. or more in thickness, laid in cement with a vertical asphalt damp-course, and with brick buttresses 9 ft. or so apart, a comparison of the modern method of tank construction in ferro-concrete with walls 5 in. or even 4 in. in thickness was most striking.

Whilst considering the swimming bath, an interesting invention known as the wave bath, which had not hitherto received the attention in this country it deserved, was worthy of notice. Briefly, the system comprised machinery for producing a series of waves—so realistic as to be similar to the waves of the sea—and which had the additional advantage of being warmed to a desirable temperature. By means of the principle of aeration and filtration a continuous supply of clean water was assured, and very considerable economies in cost were obtained. The system was recommended by experts in water analysis and approved by the Ministry of Health.

The system known as the "Lassar Baths System," introduced into this country by Mr. Kane, comprised in its ideal arrangement, said the lecturer, a central hall, or bath-room, in which were fitted the bath compartments containing spray baths, and in an adjoining room a suitably arranged system of dressing boxes, one box being reserved for each bath compartment. The temperature of the hall containing the bath compartments was raised to 90 deg. or 100 deg., and that of the dressing rooms adjoining the hall to 60 deg. The bather entered the dressing-box, which was fitted with two doors, one communicating with the common corridor and the other with the bath hall, in which the door of his bathing compartment faced him. The door between the dressing-box and the bath hall was self-closing. The spray bath, in which the bather could regulate the temperature of the water by means of a specially designed mixing valve—so adjusted as to prevent scalding—only occupied a fraction of the time frequently spent in a slipper bath, and had no enervating effects. It was admirably suited for use after sports in schools and colleges, or for industrial workers in mines or factories, or, in fact, in any district where it was desired to accommodate a large number of bathers cheaply, efficiently and quickly.

One of the most important considerations in bath design was the question of heating and the type of plant to be used for this purpose. The old high-pressure steam system, with its cumbersome Lancashire boilers, tall, unsightly chimney stack, and its costliness in construction and in working expenses, was out of date, and a system of heat-generating plant had now largely superseded the high-pressure steam system and would, in all probability, be largely adopted in public baths all over the country, until heating by electricity became possible. The system consisted in installing cast-iron or steel sectional low-pressure boilers combined with calorifiers and circulating pumps, coupled together direct without the intervention of any steam traps, automatic condense pumps or boiler feed pumps. These took the place of high-pressure steam boilers, with their attendant mechanical devices. The apparatus consisted of a battery or batteries of sectional steam boilers working at a pressure not exceeding 10 lb. per square inch, but generally working at 5 lb. per square inch or less, while above the steam boilers, in suitable positions, were fixed calorifiers, the number varying according to the duties required. For instance, one calorifier would be provided for warming up the water in the swimming pond or ponds, one for generating hot water for the slipper baths, public and establishment laundries, etc., and one for warming the buildings on the low-pressure hot-water system. The steam boilers were direct coupled to the calorifiers, and the condense taken back from the calorifiers direct into the boilers, the whole of the condense water returning by gravity, no steam traps or mechanical device being necessary. That being so, the same water in the boilers was continually being re-evaporated and condensed, and consequently no lime deposit was generated in the boilers and the cleaning of the boilers became unnecessary.

The method of warming the swimming pond or ponds was by passing cold water from the company's main when filling the ponds, through its particular calorifier on the way to the swimming ponds; thus the cold water took up a considerable amount of heat on its way to the ponds, without the assistance of any mechanical energy. When the swimming ponds were filled and the water company's main was shut down by the valves, the necessary additional heat to the water was obtained by circulating the water in the ponds through a calorifier by means of a centrifugal pump coupled direct to an electric motor. Alternatively, the pump might be belt-driven if the circumstances were suitable. By this means any temperature of the water in the ponds could be achieved; the final temperature required usually being from 72 deg. to 75 deg. The hot water for the slipper baths, public and establishment laundries, etc., was generated in a separate calorifier installed for this purpose, the water passing through the calorifier on its way from the cold-water storage tank to the slipper baths and other appliances.

The low-pressure heating apparatus also was generated by an independent calorifier, and the circulation to the various radiators, heating pipes, etc., was maintained either on the gravity system, if the levels of the building were suitable, or by forced circulation actuated by a centrifugal pump, in which case all variations of levels were readily overcome and an efficient circulation was ensured to every part of the building.

In reply to a question, Mr. Cross said that the difficulty of obtaining suitable sites for public baths was great. He was, however, of the opinion that although in municipal buildings there was seldom much money for architectural embellishment, such as carving, statuary, etc., it was possible, even in the face of a low building cost, to obtain architectural dignity.

THE CONGRESS DINNER.

The Congress dinner was held on the Thursday evening, at the Queen's Hotel, the Chairman of the Council, Professor A. Bostock Hill, M.Sc., M.D., being in the chair. Amongst those present were Councillor T. S. Dymond, the Mayor, Sir Allan Powell, C.B.E., Mr. H. D. Searles-Wood, F.R.I.B.A., Lieut.-Col. F. E. Fremantle, O.B.E., M.P., and Professor J. Basil Buxton.

The loyal toasts honoured, Dr. Charles Porter proposed the toast of "The Mayor and Corporation of Hastings," to which the Mayor responded.

Councillor A. D. Thorpe, J.P., then proposed the toast of "The Royal Sanitary Institute." He said that the Institute's work touched every section of the community. He would like to point out that while in 1875 they had but seven members, now the Institute had five thousand. Their operations were world wide, and for the efficient carrying out of this work they were greatly dependent upon the committee and secretary.

The Chairman, in his response, said that there was a connection between the Royal Sanitary Institute and Hastings, for one of the Institute's founders was the Duke of Northumberland, while Hastings' present member was Lord Eustace Percy. Speaking of national sanitation, the Chairman said that fifty-one years ago people did not believe in hygiene. The common people did not know the first thing and others had irons in the fire. But the Institute had never faltered. Their first job was to certificate sanitary inspectors, so that public health authorities could know who efficiently could carry out their work. The Royal Sanitary Institute stood out peculiarly amongst societies because every person could take part in the work.

Dr. G. F. Buchan, Chairman of the Institute's Examination Committee, proposing a vote of thanks to the delegates, said the presence of foreign delegates made for international amity and international public health.

Dr. S. Kojima, of Japan, suggested a sanitary alliance between England and Japan, while replies were also made by Councillor E. O. Drake, Johannesburg, and Alderman E. J. Reed, J.P., Mayor of West Ham.

Mr. John D. Watson gave "The Local Committee and Officers of the Congress," and spoke highly of Councillor G. Shoesmith, Chairman of the local committee, and D. W. Jackson and Dr. G. R. Bruce, local secretaries, both of whom responded.

[Our report will be concluded next week.]

WHITLEY COUNCILS.

"The Whitley Councils' Crisis" is the title of a manifesto issued to the Press by five members of the Roadstone Committee of Conservative Members of Parliament, namely, Sir Cooper Rawson, M.P. (Brighton), Sir Basil Peto, Bt., M.P. (Barnstaple), Mr. W. Lindsay Everard, M.P. (Melton), Lt.-Col. G. Windsor-Clive, C.M.G., M.P. (Ludlow), and Major S. E. Harvey, M.P. The manifesto begins with a reference to "the grave danger that the National Joint Industrial Councils may disappear for want of a simple piece of legislation which a majority in each of the industries concerned desires," and a plea for facilities and support from the Government for the Bill by which an agreement made by a Council which applied for an Order legalising that particular agreement would become binding throughout the industry in the area over which the Council had jurisdiction.

Following are some of the chief points of the manifesto:—"Undercutting by unorganised employers at present leaves the organised employer with the choice of losing orders, with short time or unemployment for his men, or of ignoring the Whitley Council and reducing wages. The inevitable result must be the breaking up of the Council. Some Councils are holding together only in the hope of legislation.

"The unanimous agreements of the Whitley Council for the Granite and Roadstone Quarrying Industry, in which relations between employers and men could not be better, are flouted by certain local authorities which own quarries as well as by private firms. The Council has asked the Government if grants for road work could not be made conditional upon the provision in the fair wages clause in contracts for the N.J.I.C. rate of wages prevailing in the district. So far the Ministers of Health, Transport, and Labour have not been able to see their way to use their influence in the direction desired."

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—ED.

Asbestos Sheeting.

[REPLY TO "ASBESTOS," JULY 1.]

SIR,—If a tile patterned sheet with a varnish finish would answer your correspondent's purpose, almost any of the better known firms of asbestos manufacturers would be able to supply. READER.

Artificial Stone.

[REPLY TO "FRESHMAN," JUNE 24, AND TO "SURVEYOR," JULY 8.]

We have read "Surveyor's" letter in your issue of the 8th inst. It is our invariable custom in all jobs on which artificial stone is employed to measure the latter in detail. A copy of the bill of quantities of the stone is sent to the competing sub-contractors, and the lowest estimate received inserted as a P.C. sum in the main bills of quantities. We think your correspondent's assertion that the quantities are "more often than not taken off by the tendering firms" is incorrect, and that the method mentioned above is adopted by the majority of quantity surveying firms CHARTERED SURVEYORS.

SIR,—"Surveyor," in your July 8 issue, states that "Artificial stone sub-contracts are generally included as P.C. sums in bills of quantities, the quantties for which are more often than not *taken off by the tendering firms from the drawings*" (the italics are ours).

We fail to understand why it should be more difficult for the surveyor (who is appointed and paid for that purpose) to take off the quantities than for the "tendering firms" to do so; surely such a suggestion is a reflection on the profession. We see no more difficulty in measuring artificial stone than the genuine article or even terra cotta. If the stones are cubed and their labours properly described (with sketches in special instances) there is no need for the elaborations referred to at the end of your correspondent's letter.

The increasing tendency of placing on "the tendering firms" the onus of measuring from the drawings appears to be striking at the very root of the surveyor's calling, and if carried much farther will mean his elimination by a piecemeal return to the old days when the one and only "tendering firm"—the builder—took off the whole of the quantities from the drawings and the quantity surveyor was unknown. We are constrained to ask whether the growing habit of unduly loading "quantities" with P.C. sums is a sign of deterioration, incompetence, or laziness? BUILDERS.

Lime for Plastering.

[REPLY TO "J. R. T.," JULY 15.]

SIR,—I do not agree with "J. R. T.'s" solution at all. If you put a certain measure of dry lime in a bucket and then add water, the effect is an apparent shrinkage of bulk in the lime. The same applies to much the same degree with sand, the water driving out numerous air bubbles and actually permitting the solids to pack tighter than when dry, so that the wet putty added to the dry sand in bulk should actually give the lime the advantage, and the analysis should certainly not disclose a shortage of lime in my opinion. WHAT ELSE.

English Oak.

SIR,—A quantity of English oak which I have used for beamed ceilings and external half-timber work has shown an excessive amount of shakes within a few months of building in. I am advised that my specification is not sufficiently stringent to cover this defect. Can you quote me a suitable specification clause to cover? RESTORER.

Scottish Contract.

SIR,—I am expecting to build in Scotland in the near future, and I understand the local practice is to make separate contracts with each trade. This surely must throw a considerable amount of work on the architect's shoulders, in the way of co-ordinating the separate trades, which work would ordinarily be the job of the general contractor. Should I be justified in claiming additional fees for this work? SASSENACH.

Soft Woods.

SIR,—Is there any danger in using white wood for joinery, and is there any appreciable difference in cost between this and the more usually specified red deal? YOUNGSTER.

THE WEEK IN PARLIAMENT

WESTMINSTER, *Wednesday.*

The Registration Bill.

A private meeting of the Select Committee which is considering the Architects (Registration) Bill was held on July 12, to consider the evidence submitted to them, and amendments to the Bill.

Slum Clearances.

Mr. Buxton asked, in view of the Minister of Health's recent statement that progress should shortly be made with the improvement of slum conditions, what steps was it proposed to take in the matter?

Major Cope said that 98 schemes for the clearance of slum areas in various parts of the country had so far been confirmed, and the Minister anticipated that in view of the progress which was being made generally with house building, local authorities would shortly be able to turn their attention in a greater degree to this aspect of the housing problem. Local authorities already had very wide powers, and provision was made in the Housing Act of 1923 for the grant of Exchequer financial assistance to local authorities who carried out improvement schemes which were approved by the Minister, including the provision of rehousing accommodation. The question of further legislation to facilitate and extend the power of dealing with slum conditions was at present engaging the Minister's attention.

Housing in Westminster.

Sir Robert Thomas asked the Minister of Health whether he was aware that the problem of housing conditions in the city of Westminster was due to the high cost of building; and if he would state the cause of the high cost of building in this particular area?

Major Cope, who replied, said that the Minister was not aware of any reason why the cost of erecting houses should be materially more expensive in Westminster than in any other part of Central London, but the high cost of land in Westminster materially increased the difficulty of providing housing accommodation in the city at a reasonable rent.

The Making Up of Roads.

Mr. Thurtle asked the Minister if his attention had been drawn to the hardship suffered by owners of new houses, who had, with difficulty, contrived to find sufficient money to buy houses, when they were confronted with demands from the local authority for the cost of making up the roads in which the houses are situate: and if he was proposing to take any action for relieving owners of new houses of this burden?

Sir Kingsley Wood said that no action was proposed with the object of relieving owners of the entire burden of private street works. The general law provided for an appeal against unreasonable demands of the local authority. When cases of hardship were brought to the notice of the Minister, he encouraged the local authority to spread the burden, if the owners so desired, over a period of years, and he was willing to sanction loans for that purpose.

Rent Restriction.

Sir John Power asked the Minister of Health whether, in the forthcoming Rent Restrictions Bill, he intended to make it easier for people to obtain possession of their own houses for their own occupation?

Sir Walter de Frece asked the Minister whether, in connection with the renewal of the Rent Restriction Acts, he would consider the desirability of obtaining from the chief local authorities their views on the policy of gradual decontrol and its effect on the housing problem in their respective areas.

Mr. Chamberlain said that the present proposal of the Government was that the Rent Restriction Acts should be extended for one year by means of the Expiring Laws Continuance Act, and if this was done, no amendments such as those contemplated would be practicable.

Compensation.

Mr. Day asked the Minister whether, in view of the hardship experienced by owners of small houses in Watergate-street, Deptford, and other parts of Great Britain who had been served with notices under Section 46 of the Housing Act of 1925 that their property was required for reconstruction or other improvement schemes, and that they would only be compensated for the value at the time the valuation was made of the land, as the site was cleared of the buildings, he would consider the introduction of amending legislation so that small property owners could be reasonably recompensed for the loss of their property?

Mr. Chamberlain said that he hoped to be able to introduce legislation, but he was unable at present to give any indication of the date of its introduction.

Beauties of the Countryside.

Sir Robert Thomas asked the Minister of Health whether, in view of the steady encroachment of urban conditions upon the countryside, consequent upon the easy access afforded by motor transport, he had considered the desirability of setting apart certain districts as national parks for the purposes of health and holiday-making, with restrictions upon the erection of houses and industrial buildings?

Mr. Chamberlain said that measures were not contemplated in this direction.

Sir Robert Thomas asked the Home Secretary whether, in view of the rapid urbanisation of the rural districts, he was prepared to introduce legislation dealing comprehensively with the whole question of the disfigurement of the countryside, and especially of beauty spots and holiday resorts, by advertisements, industrial plants, and other objects?

Sir William Joynson-Hicks said His Majesty's Government were always willing to consider any practicable suggestions that might be put forward for protecting the natural beauties of the country, but he was unable to conceive how it would be possible in a single measure to deal with a subject of such complexity and involving so many different interests. Extensive powers had, during the life of the present Parliament, been conferred on local authorities to protect their districts against disfiguring advertisements, and in Town Planning Schemes for land about to be developed for building purposes provision might be made for securing the amenities of the area.

Architects' Registration Bill.

Mr. G. B. J. Athoe, General Secretary of the Incorporated Association of Architects and Surveyors, referring to the report of the proceedings before the Registration Bill Select Committee, in our issue for July 8, in which it is stated that the witness on behalf of the Faculty of Architects and Surveyors, in reply to a question "How many members have you?" said "five thousand and fifty," points out that according to the Minutes of Evidence, the reply was "five hundred and fifty; about three hundred are approximately architect members."

THE BUILDING TRADE

THE LAW OF FIXTURES.—XIII

By W. T. CRESWELL, Barrister-at-Law; L.R.I.B.A.; Associate (late Fellow) of the Surveyors' Institution; &c.

REMEDIES FOR THE RECOVERY OF FIXTURES OR THEIR VALUE AFTER THEIR ILLEGAL REMOVAL.—II.

Under Distress.

Distress is a remedy whereby an aggrieved person can, in a summary manner, and without any legal process, take the personal chattels out of the possession of a wrong-doer into his own possession, to hold them as a pledge for the redress of an injury, the performance of a duty, or the satisfaction of a demand. The term distress is also applied to the thing taken or distrained.

At one time many personal chattels, such as machines attached to the freehold which were not in the nature of fixtures, were held to be distrainable. It may now, however, be taken that all fixtures belonging to tenants of any category are absolutely privileged from distress. This extends to all machinery and engines which are attached, or even attached by "constructive annexation," to the freehold, or which may have been put up for trade purposes by the judgment debtor. Neither can distress be levied on any fixtures which for any necessity may have been temporarily removed elsewhere, if they form part of a fixture, and are considered part of the freehold. The following show how the Case Law has evolved :—

In Dalton v. Whittem (1842), 3 Q.B. 961, a landlord distraining for rent in arrears from a tenant of a public-house, seized certain beer-engines, etc., which were tenants' fixtures affixed to the freehold, and removed them from the premises. It was held that an action for trover lay against the landlord for these articles, and that he could not distrain on them for rent; but that whilst for the purposes of the action for trover the beer-engines, etc., were considered goods and chattels to be recovered, yet they were not, when installed, goods and chattels for the purposes of distraint.

In Hellawell v. Eastwood (1851), 6 Ex. 295, when certain machines, called "mules," in a cotton mill were fixed in part by means of screws to wooden flooring, and in part into holes let into stone flooring and run with molten lead, were held distrainable for rent. This was because the Court decided they had not lost their character as movable chattels; not that tenants' fixtures could be distrained upon. This case, which only decided that as these chattels retained their chattel nature they were therefore distrainable, would not now be followed, for in Turner v. Cameron (1870), L.R. 5 Q.B 305, three railways were connected with a coal mine, one of these being within the mine, one within a yard attached to the colliery, and the third extending from the yard and effecting a junction with a public railway. The lessee of this triple railway system had mortgaged it to the plaintiff, and the latter had entered into possession. The rent being in arrears, the lessor distrained on the three railways; which had been constructed by preparing the ground with ballast spread over it in which sleepers were embedded, and to these the rails were fastened by nails. To remove the rails it was necessary to loosen the ballast by means of picks; and to lever the sleepers up, leaving holes in the ballast, and they were slewed and shifted about from time to time for the convenience of the colliery. It was held that the three railways, by their mode of annexation to the soil, became fixtures, and were not distrainable.

Also in Hobson v. Gorringe (1897), 1 Ch. 182, a gas engine affixed to the freehold by bolts and screws to prevent it from rocking was held sufficiently annexed to the land as to become a fixture. This case was followed in Reynolds v. Ashby and Son, Ltd. (1903), 1 K.B. 87, which was a similar case.

Again, in Crossley Brothers, Ltd. v. Lee (1908), 1 K.B. 86, an engine which was affixed to the floor of premises and hired from the plaintiffs' by the defendants' tenant for the purpose of his trade, was seized by the defendant under a distress for rent due from the tenant (the hirer), and the defendant, in fact, sold it. It was held, the engine had become a fixture and was not distrainable.

In all cases no articles can be distrained upon unless it is possible to reinstate them in the same state or plight in which they were before the distress. (See Derby v. Harris, 1841, 1 Q.B. 895, where fixtures as kitchen ranges, stoves, coppers and grates which a tenant had the right to sever from the freehold and take away during the term, were held not distrainable for rent.) This case was approved and followed in Provincial Hill Posting Co. v. Low Moor Iron Co. (1909), 2 K.B. 344, where under an agreement by which landowners let to a bill-posting company the right to fix advertisement hoardings on their land for a term of seven years at a specified rent, the company erected upon the land certain hoardings which were supported by means of vertical posts sunk four feet into the ground and strengthened by cross-pieces attached to them, and were further secured from behind by means of a strut and stay let substantially into the ground. It was held, that the hoardings, though removable by the company during the term, were so affixed to the land that they could not be distrained upon for rent due under the agreement.

As, therefore, tenants' fixtures cannot be distrained upon for rent, a tenant is entitled to recover the value of fixtures if removed from premises by the landlord in error and sold as chattels. The value is not necessarily that paid originally by the tenant or the sum which has been obtained at a forced sale; it may be valued, for instance, at the price payable by an incoming tenant to an outgoing tenant. Generally fixtures *in situ* are worth much more than they are when severed. (See Moore v. Drinkwater, 1858, 1 F. & F. 134.)

Since a mere *intention* to do wrong is by itself not actionable, a mere threat of distress is not actionable; although, as already pointed out, a tenant might obtain an injunction to restrain a threatened distress if he brings into Court the rent due.

A creditor distraining fixtures and merely "purporting to sell" them, affords no ground of action, as such sale is a nullity. Also the including of tenants' fixtures in a notice of distress will not attach any liability to the landlord if in fact no service or severance of these takes place. (See Beck v. Denbigh, 1860, 29 L.J.C.P. 273.)

Crops produced by cultivation of the soil and the expenditure of labour, and termed *fructus industriales*, such as corn, and which are not the natural produce of the soil, such as natural grass, is not distrainable at Common Law, but, under section 8 of the Distress for Rent Act, 1737, a lessor or landlord may distrain on all sorts of corn, grass, hops, roots, fruits, pulse, or other product growing on the premises as a distress for arrears of rent. The distress must be sold, and cannot be retained as a pledge. (See Piggott v. Birtles, 1836, 1 M. & W. 448.) This right, however, does not extend to trees, shrubs and plants growing in a nursery ground, for they cannot be distrained. (See Clark v. Gaskarth, 1831, 8 Bing. 92.)

Under a Writ of Execution.

No realty can be seized under a writ of *fieri facias* (see previous article), therefore such fixtures as would descend with the realty to the heir of a judgment debtor (as distinguished from his personal representative) are excluded from the operation of such a writ. Also premises that are leased cannot be entered and the fixtures restrained upon, under any writ issued against the lessor or landlord. (See Poole's Case, 1703, 1 Salk 368; and Beaufort v. Bates, 1862, 3 De G. F. & J., 381.)

In all cases, however, the judgment debtor must have the right himself to sever any fixtures which are seized; therefore it is necessary to inquire into the right of removal before seizing any fixtures. If a tenant, for instance, wrongfully severs articles demised to him with the premises, then, since the property in them even now that they are reduced to a chattel state still rests in the landlord, the sheriff cannot therefore take them under an execution against the tenant. However, he can seize and convey the tenant's *interest* in the fixtures, though the articles themselves still remain affixed to the freehold. If, however, he has seized fixtures together with the lease of the premises to which they are attached and is authorised by the tenant to sever them from the freehold to satisfy the demand for which the writ is issued, he will be bound to sell the fixtures separately unless he can find a purchaser for the lease together with the fixtures. (See Barnard v. Leigh, 1815, 1 Stand 43; and Farrant v. Thompson, 1822, 5 B. & Ald. 826.)

Under Criminal Law.

Malicious Damage.

Under Section 13 of the Malicious Damage Act, 1861, it is a misdemeanour for a tenant for years or other less term or a tenant at will or one holding over after the termination of a tenancy, to unlawfully and maliciously pull down, or sever from the freehold, any fixture fixed in or to a dwelling-house, or building, or part thereof. The damage must have been done maliciously, that is wilfully, and without any claim or pretence of right to do it.

Larceny.

It is larceny (i.e., the wrongful taking and carrying away of the personal goods of anyone from his possession with a felonious intent to convert them to the use of the offender without the consent of the owner) under Section 8 of the Larceny Act, 1916, to steal or intend to steal and damage any fixtures, trees, etc., fixed in or to any building; and under section 16 of the Act, it is larceny for a tenant or lodger, or wife of a tenant or lodger, to steal any chattel or fixture let to be used by such person in or with any house or lodging; though if it appears that he only intended to raise money on such articles for a temporary purpose, and at the time of pawning them had a reasonable expectation of being able to redeem them before the expiration of his tenancy, the tenant or lodger so charged is entitled to an acquittal. (See R. v. Phetheon, 1840, 9 C. & P. 552, and R. v. Medland, 1851, 5 Cox, 292.)

A person entering into an agreement for the lease of a house with the fraudulent intention of stealing its fixtures or taking possession, and who does, in fact, steal them on taking possession, is guilty of larceny. (See R. v. Munday, 1799, 2 East P.C. 594, followed in R. v. Richards, 1911, 1 K.B. 260.)

BUILDERS' LIABILITIES

Our attention has been called to a case, Moffat *v.* Williams, which was decided in the Chancery Division at the close of last sittings, and which was admitted by the Judge who tried it to be one of great hardship to the plaintiffs, a firm of builders carrying on business at Birmingham, who, to quote the learned Judge, "had executed apparently with the greatest success very substantial work on the property in question, and who unfortunately for himself has not received one penny of payment in respect thereof, work which has involved him of necessity in very large expenditure and liability which he will have to discharge without the remotest chance as far as one can see of ever getting any portion of it." In the interest of others engaged in the building trade it seems necessary to examine the circumstances which led to this result, involving a firm, against which no allegations in connection with the work performed were or could be made, in a serious loss of time and money.

In November, 1925, the plaintiffs, through Messrs. Sandy & Norris, architects, came into touch with a Captain Williams (since deceased), the son of the defendant in this action, and entered into a contract with him for the conversion of an old-fashioned farm-house into a gentleman's residence. There were two sections of the work, and it was to be carried out as expeditiously as possible, the first portion, that originally contracted for, to be completed by Easter. A second portion was arranged for later. The contract was on a cost plus percentage basis, and it had been arranged that payments should be made of £500 a month as certified.

The plaintiff had no personal knowledge of Captain Williams, and he made inquiries of Messrs. Sandy & Norris, who were to be the architects, and was informed by their managing clerk that he was recommended by another client of theirs for whom they had worked and who had carried out considerable building operations. The plaintiff had at one time done certain work himself for this other client. The plaintiff also understood that Mr. Norris knew Captain Williams personally, and had made certain plans for him beforehand and had satisfied himself as to his financial position. The work was commenced at once, and the first certificate was given at the end of December. Payment was not made of the £500, but the plaintiff heard that Captain Williams was abroad. The second certificate was given at the end of January, and this again was not paid, but the plaintiff stated in evidence that he was informed that Captain Williams was abroad most of his time, and there was nothing in connection with the premises where Captain Williams' bailiff was in charge to arouse his suspicions. The third certificate, on February 27, was sent to Captain Williams, and then a letter was received from Captain Williams stating that he would attend to the matter at once, and that he had not answered before as he was abroad and the certificates had not reached him. That letter was dated March 5. On March 12 the plaintiff wrote asking for payment, and again on March 16 the plaintiff wrote to the bailiff asking him where he could see Captain Williams. The plaintiff then received a letter written from a nursing home in London informing him that Captain Williams was seriously ill and was still in bed, and that he would have to go to Paris to get the money.

It appears that at this time the plaintiff was becoming seriously disturbed, and that he would have stopped the work, which up to that date had been confined to the extension of the house as originally arranged in the contract, as the second portion which related to the servants' quarters had not been commenced, but the explanation that Captain Williams was ill, satisfied him, and he then went on with the work, and also put the second portion in hand, as the work had been undertaken as urgent. On March 27 Captain Williams offered the plaintiff a bill for £2,000 at two months, which the plaintiff took, and he proceeded with the work, two more sums being certified covering March and April, which were sent to Captain Williams. On May 31 the bill was dishonoured, a fact which was communicated to Captain Williams by letter, and as no answer was received, again by telegram, early in June. The work on the first section was then completed and the second portion was nearing completion. On June 7 Captain Williams telephoned to the plaintiff's office apologising for the matter and promising a banker's draft for the amount of the bill and the amount on the certificates. On June 11 the plaintiff and Mr. Norris had an interview with Captain Williams, there being at that time £5,000 due to the plaintiff. It is unnecessary to state in detail what passed at that interview, but it appears that a banker's draft for £3,000 or £4,000 was promised. We cannot follow accurately the following stages. No banker's draft was received, and further payments as they became due had been demanded, and on July 1, the plaintiff's works manager went to the site and there received information that the property was not owned by Captain Williams. The plaintiff stated that his suspicions had been aroused as to this at the end of May, when the bill was dishonoured

On June 30 work had been stopped by the bailiff of Captain Williams, who informed the plaintiff's foreman that he was acting under instructions from Mr. Romer Williams, the father of Captain Williams, and the defendant in this action. On July 9 the plaintiff himself was refused access to the site. The plaintiff made an effort to see Mrs. Williams at Captain Williams's residence at Curzon-street, but was refused an interview, and almost immediately afterwards it appears Captain Williams was in bankruptcy. The amount due under the certificates was £4,929.

So far as we can gather from the reports of this case and the judgment, the actual position of Captain Williams was as follows. The captain had originally contracted to purchase this property without the ability to pay for it, but for a time the vendor was content to wait so long as six per cent. was paid on the purchase-money. There then came a time when completion of the contract was required, and it was then that Mr. Romer Williams came to the assistance of his son in May, 1922, and he purchased the house for £3,000. We cannot set out the documents in which the arrangement was carried out between Mr. Romer Williams and his son, but on May 3 there was a letter from the defendant to his son giving him the option of purchasing the fee simple of the property, together with the chattels, furniture, agricultural implements and effects in or on the premises for the sum of £3,000.

That was the amount of the purchase-money Captain Williams had agreed to pay the vendor. Then on May 23 an agreement of tenancy was made by which Captain Williams was to be a tenant from year to year, paying a yearly rent of £180, and that tenancy also included all the furniture and effects. This sum was, it will be observed, the six per cent. on the purchase-money which Captain Williams had been paying pending completion. No rent was ever paid under this agreement.

In April, 1923, an absolute bill of sale was granted, by which Captain Williams assigned to the defendant, in consideration of the release of £3,000 of indebtedness, the whole of the contents of the house. From the reports it is difficult to gather what was the intention of the parties as regards this bill of sale, and we can only set out a passage on the judgment as regards these agreements. The learned judge is reported as saying: "There came a time when he" (the vendor) "would not wait longer, and the necessity for completing the purchase became imminent; thereupon the father, as is not unusual with persons occupying that position, felt constrained to step in and relieve his son from the obligation he was under to the gentleman who was the vendor, and the father asked for no more than the vendor had asked from him. He said, 'remain where you are at the same rent calculated at six per cent. on the purchase-money; if at any time you are able to complete this purchase I will let you have it at the same price as the vendor was willing to let you have it.' That to my mind cannot be considered as any possible agency; it merely gave the son a prolonged opportunity which the son had of acquiring what was to him, no doubt, a desirable property. Then it is said that at a later date there was some transaction under which the chattels which were included in the agreement were assigned to the father under an absolute bill of sale. One can readily realise that there may have been circumstances connected with the antecedent history of the son and his possible future which may have prompted both parties to a desire at any rate to secure to the father the chattels for which he had paid and which were his property. That again has really nothing to do with the plaintiff—it does not affect him in the smallest way, and so far as the transactions appearing on the documents are concerned there is nothing which affords a shred of evidence of agency."

It was alleged in the course of the case that the father must have known that this work was going on and that he stood by and did not inform the plaintiff, but the Court found that there was no evidence that Mr. Romer Williams knew anything about the expenditure incurred in respect of this property, in which he had a very remote interest, and that even if he had known he would have had to take upon himself a great responsibility in informing the builder of the interest the son had in the premises; the son had arrived at an age when he might be presumed to be competent to manage his own business, and although the son had but a limited interest as tenant it was competent for the son under the option to convert himself into the owner of the property at any time by paying the sum of £3,000. The latter point appears to us of great importance, for it distinguishes the case from cases where somebody else than the person contracting has been held liable as principal where something has been done to property with their knowledge of which they will get the benefit, a principle hinted at in a court of first instance in Crittall Manufacturing Company *v.* London County Council (*The Builder*, June 2, 1916).

We regret having to discuss a case which must be painful to all parties, but have endeavoured to set out the facts from the material before us to the best of our ability with fairness to both sides in order that such catastrophes may be guarded against in other cases. The case was entirely decided on the ground of agency and that failed. If it had succeeded it is almost impossible to say what effect such a decision would have had on the law of landlord and tenant. On any default on the part of a tenant there might be an attempt to bring in the landlord as a principal in certain circumstances.

The learned Judge, who expressed sympathy with the plaintiff, said in his judgment that it was a great misfortune to the plaintiff that further inquiries were not made before this substantial contract was embarked upon and also that some further step was not taken when it was found that certificate after certificate was neglected.

As regards the first point, from the inquiries made, Captain Williams appeared to be in a good position, and amongst builders there must be some delicacy in pursuing such inquiries as to the position of a prospective client who appears a gentleman of good position, but business is business, and a man giving large credit must be entitled without offence to inquire into the position of the person to whom he is giving it. Bankruptcy law makes it very difficult to insert terms

in the contract that will protect the builder, and, in the absence of express agreement in the contract, he has no lien on the house he has erected (see Hudson on Building Contracts, fifth edition, page 446), therefore he must rely upon the solvency of the employer under the contract. In such circumstances no prospective client should resent inquiries being made, in the absence of express security being offered to the builder as an alternative, and the builder should experience no difficulty in pursuing inquiries as to his client's solvency. For instance, in this case, had an inquiry been made in the first instance as to the ownership of the property, this should not have been resented, though very possibly it would have been. We can only suggest that the trade should take combined action to protect itself in this matter. Inquiries by the individual may be taken objection to and business may pass to a less careful competitor, but the trade as a whole might combine to make such inquiries a rule of the trade and thus remove the personal element—a rule to be applied in every case quite irrespective of the apparent position of the clients and to be acted upon in the ordinary course of business.

As regards the second point, that the plaintiff should have stopped the work when the certificates were ignored, it is, of course, regrettable that he did not do so in the light of subsequent events, but we think we have shown that events might well have led him to think that to take such a course would involve him in certain loss, whilst if he proceeded there might be no loss at all. People in perfectly solvent conditions often delay their payments for some quite inscrutable reason. Hard cases, it is said, make bad law, but our intention in calling attention to this case, where the law appears to have held good, is to prevent other persons from suffering from the law and to indicate that self-protection is necessary in such cases.

SOUTH-WESTERN BUILDERS

Proposing "The National and South-Western Federation of Building Trades Employers" at the annual dinner at Plymouth, on Friday, July 1st, which followed the summer conference of the South-Western Federation of Building Trades Employers, Mr. J. Wibberley, the Plymouth Borough Engineer, said they had some very serious problems to face, and he could see from their deliberation during that day that the members of the Federation were not only thinking of themselves but more especially of the effect their decisions would have upon the general community. They had it in their power to provide houses for the people, and this need was being met in a very generous and ample way. They had their responsibilities, and were realising them as far as town planning was concerned. The municipal authorities found whenever they were asked to plan a certain area in Plymouth that they were always met in the most generous spirit by the landlords concerned. That, to a large extent, was due to the advice given by members of the builders' association in regard to the development of property.

Alderman A. W. Wills, of Bath, responding, referred to the splendid schools which Plymouth had erected, and declared them to be a monument to the erectors and to the patience of the ratepayers.

Reference was made by the President of the National Federation, Mr. E. W. King, of Newport, who also replied, to remarks made by the Minister of Health the previous day in regard to the reduced cost of building, which the Minister attributed to the reduction of the subsidy. Mr. King disagreed with this, and suggested that the cause was the very keen competition builders had to enter into owing to the general stagnation of building in the country. He said that he firmly believed that the high cost of building was in part due to the short hours worked, while there was also no incentive to the men to do their best. He said he would like to see the institution of some system of bonus on output, or payment by results. He believed the community were benefited by the existence of the Federation, which, while it naturally looked after the interests of the industry in which they all got their livelihoods, took into consideration as one of the main factors the question of how the public would be affected.

COURSES OF INSTRUCTION FOR TEACHERS OF BUILDING AND ALLIED SUBJECTS

During the present week, there have been held at the L.C.C. Westminster Technical Institute, Vincent-square, S.W.1, various courses of instruction for teachers of building and the allied trades. Courses of instruction on "Building Science" and "Building Construction and Drawing" have been completed, while the course on "Painting and Decoration" began on July 18, and will be continued on Monday next, July 25, at the L.C.C. School of Building, Ferndale-road, Brixton (mornings), and at the L.C.C. Westminster School of Art, Vincent-square, S.W.1 (afternoons). The principal subject of study will be decoration, with special reference to modern tendencies. Problems on the adaptation of elements of historic decoration to modern requirements will also be considered. During the second week the work will have special relation to the colour elements in decorative schemes. The work of the morning sessions will be mainly under the direction of Mr. H. Davis Richter, R.I., R.O.I., and Mr. A. R. Jackson, A.R.C.A. The afternoons will be devoted to special lectures, discussions and visits. The discussions will be organised by Mr. W. Cantrill, F.I.B.D. (Manchester School of Art), who will act as Tutor for the Course.

We give herewith the syllabus of the "Building Science" Course.

The Course is not intended to cover the whole field of Building Science, but rather to deal in detail with certain sections of the physics and chemistry of building which, although less familiar, are of fundamental importance. For a treatment of some of the matter referred to in the syllabus of lectures, reference should be made to text-books on building science and on elementary physics and chemistry. Amongst others, one or more of the following text-books may be consulted:—*A Text-book of Physics*, Willows (Edward Arnold); *A Course of Physics*, Draper (Blackie & Co.); *Experimental Science*, Brown (Cambridge University Press); *An Elementary Chemistry*, Holmyard (Edward Arnold); *Elementary Chemistry*, Smith (Bell & Sons); *Inorganic Chemistry*, Hooton (Edward Arnold); *Practical Chemistry for Engineering Students*, Longmans; *The Physics and Chemistry of Building Materials*, Mursley (Constable, London); and *An Introduction to Building Science*, Brady (Edward Arnold, London).

Teachers should also see the *Memorandum on the Teaching of Building in Evening Technical Schools* (Circular 896), published by H.M. Stationery Office, price 6d.

The following papers, dealing with special points in the lecture course, should also be read if possible:—

Building Research Special Report No. 4, on *The Transmission of Heat and Gases through, and the Condensation of Moisture on, Wall Materials*, price 1s.

Building Research Technical Paper No. 3, *The Permeability of Portland Cement Concrete*, price 1s. 6d.

Building Research Special Report No. 9, *Lime and Lime Mortars*, price 1s. 9d.

All of which may be obtained from H.M. Stationery Office, Adastral House, Kingsway, London, W.C. 2.

Teachers should familiarise themselves with the simple methods of density measurement by the principle of Archimedes, and also with the use of screw micrometers. It will be assumed that the teachers are acquainted with the work in Building Science which is generally incorporated in the first and second years of a senior building course. The material to be given in the lectures is divided below into four sections, each of which may occupy one or more lecture periods. The laboratory work will consist in carrying out experiments described in and illustrating the lectures.

Section I.—*The Porosity and Permeability of Building Materials.*—Different types of porosity in solids—permeability—no necessary connection between porosity and permeability—the flow of water through building stone—flow through cement products—the permeability of cement rendering—the relation between porosity, water absorption, and resistance to frost.

Section II.—*The Structure of Materials.*—Plastic solids—pitch and asphalt—unstable materials—the devitrification of slags, glass, and glazes. Crystalline solids—crystals in metals, in rocks—effect of size of crystals in stones on fire resistance and weathering—microscopic structure of metals, rocks.

Section III.—*Effect of Moisture on Building Materials.*—Colloidal substances—moisture expansion—the measurement of moisture expansion—shrinkage of cement products—moisture and expansion of building stones—seasoning of timber.

Section IV.—*Lime and Cement.*—Chemical actions—lime burning, slaking and setting—fat, lean, and hydraulic lime—classification of lime. Portland cement—setting and hardening. High aluminous cement—setting—heat evolution in setting—protection of setting cement against frost.

Laboratory Work.—The experiments arranged include measurements of water absorption of building materials; tests of permeability, in which actual measurements will be made in a special apparatus of the water entering a specimen minute by minute; experiments to show the expansion of building stones on becoming moist; measurements of the changes of length in seasoning timber; tests to show the mechanism of the setting of lime and cement, and experiements on the rate of heat evolution from setting cement.

Use of the Microscope.—During the progress of the laboratory work demonstrations will be given showing the use of low-power microscopes in the examination of building stones. Much of the matter introduced in the lecture is connected directly or indirectly with the weathering of building stones. In order to illustrate the theoretical considerations so introduced, a number of microscopical sections of typical British building stones will be viewed under the microscope and the various salient features of the structure brought out in discussion. The stones to be examined in this way will include Portland, Darley Dale, Anston, Monk's Park, and Headington stones, also some granitic rocks.

Clacton Municipal Offices.

At a special meeting of Clacton Urban District Council, with Captain E. R. Pennell in the chair, Sir Brumwell Thomas, the architect, attended in connection with the proposed new municipal buildings, etc., and stated that he had completed the general drawings; also for the provision of a public library, comprising a library for 20,000 volumes, reference library, ladies' and children's rooms, and librarian's office. He recommended that the public library should be a separate building, which left as good a layout for the public hall itself. Between using reinforced concrete and brick and stone for the buildings, he advised the latter. Sir Brumwell Thomas gave the approximate costs as follows:—Official departments and Council suite, £28,000; public hall, £13,500; public library, £8,500; extra cost of gallery to the public hall, £3,000. If the work was carried out in two periods the extra cost would probably be £1,000. By resolution of the Council, the architect was instructed to obtain prices for the construction of the buildings

THE TRADE UNIONS AND TRADE DISPUTES BILL.

House of Lords Committee Stage.

VERY few amendments were made in the passage of the Trade Unions and Trade Disputes Bill through the Committee stage in the House of Lords. As regards sub-clause (4) of Clause 1, which stood as follows: "The provisions of the Trade Disputes Act, 1906, shall not, nor shall the second proviso to sub-section (1) of section 2 of the Emergency Powers Act, 1920, apply to any act done in contemplation or furtherance of a strike or lock-out which is by this Act declared to be illegal, and any such act shall not be deemed for the purposes of any enactment to be done in contemplation or furtherance of a trade dispute." Lord Thompson moved to delete the words which declare that the second proviso to sub-section (1) of section 2 of the Emergency Powers Act, 1920, shall not apply to any act done in contemplation or furtherance of a strike or lock-out declared by this Act to be illegal.

Section 2 of the Emergency Powers Act enables emergency regulations to be made by Order in Council, but the second proviso to the section enacts that "no such regulation shall make it an offence for any person or persons to take part in a strike, or peacefully to persuade any other person or persons to take part in a strike." Lord Thompson contended that the words he sought to delete in the sub-clause seemed to take away the protection afforded by the second proviso in the Emergency Act and also to be inconsistent with the proviso to Clause 2 in the Bill which provides "that no person shall be deemed to have committed an offence under the Bill or at common law by reason only of his having ceased work or refused to continue work or to accept employment."

The Lord Chancellor is reported as having said that he did not believe for a moment that any regulation would be made which would make it an offence for any person merely to take part in a strike, but to meet any reasonable fear he would move an amendment on Report in some such words as "Provided that no regulation under the Emergency Powers Act shall make it an offence for any person to take part in a strike," but as regards peaceful persuasion he thought it ought to be open to the Government by regulation to forbid people to persuade others to take part in an illegal strike, whether the persuasion was peaceful or warlike.

We must say the whole point seems academic, for Clause 2 of the Bill makes it an offence for any person to declare, instigate others or incite others to take part in a strike or lock-out made illegal by this Bill, or otherwise act in furtherance of such a strike or lock-out, and thus on this point the Bill will supersede the necessity for an emergency regulation.

There was considerable discussion on Clause 3, which relates to intimidation, on a motion by Lord Gorell to leave out the first three sub-sections, but the amendment was withdrawn on the Lord Chancellor undertaking to reconsider the wording of the clause with those who advised the Government and with any others who might be willing to give them their help.

A motion was made to omit Clause 5 sub-clause (2), which provides that any established civil servant who knowingly contravenes any of the provisions of the regulations made under this clause shall be disqualified for continuing to be a member of the civil service, as it was said that a civil servant ordinarily was subject to dismissal only if in the opinion of the Minister the offence was grave enough to justify dismissal, but the penalty imposed for any kind of breach was too wide. The Lord Chancellor expressed the opinion that the permanent disqualifying penalty did seem severe, and promised consideration of the point, and on this undertaking the amendment was withdrawn.

As regards Clause 6, which makes it unlawful for any local or other public authority to make it a condition of employment that a person shall or shall not be a member of a trade union, the Lord Chancellor undertook to consider the position of education authorities.

The only amendment actually accepted was the deletion of the words "or to accept employment" in Clause 8 sub-clause (2) in the definition of the word "strike." The Lord Chancellor, however, intimated that if in the House of Commons a different view should be taken, the Government must not be taken to be finally bound by his acceptance. The definition as it stands in the Bill is as follows:—"In this Act the expression 'strike' means the cessation of work by a body of persons employed acting in combination, or a concerted refusal, or a refusal under a common understanding of any number of persons who are or have been employed to continue to work or to accept employment." It was contended by the mover of the amendment that by the latter words a mere refusal to accept employment would create a "strike," and also that disputes which were really lock-outs might become strikes liable to be declared illegal.

There is, however, a difficulty if these words are omitted. By the proviso to sub-clause (2) of Clause 1 the individual is safeguarded, as it provides that no person shall be deemed to have committed an offence under the clause or at common law by reason only of his having ceased work or refused to continue to work or to accept employment, and the definition of "strike" only deals with action taken in combination, or concerted action. Concerted action on a large scale to refuse to accept employment might present all the features of a strike intended to coerce the Government.

NEW BUILDINGS IN LONDON

Aldgate.—PREMISES.—On a site at the corner of Aldgate and the Minories, new premises, to be known as "Portsoken House," are to be erected. The work is to cost about £70,000, and the plans have been prepared by Mr. G. Val Myer, A.R.I.B.A., of Abbey House, Victoria-street, S.W.1.

Becontree.—SCHOOL.—The Essex County Council has purchased a site in Green-lane for the provision of additional school accommodation.

Camberwell.—PREMISES.—Messrs. Lloyds Bank, Ltd., have obtained land in Lordship-lane, near Woodwarde-road, from the Camberwell Borough Council. Messrs. Spencer & Kent, surveyors, 19, Croxted-road, have submitted plans of the new premises to be erected on the site, and the Council has provisionally approved them.

Downham.—CHURCH.—The Wesleyan Methodist Church authorities are purchasing a site with frontages to Downham-way, Bankfoot-road, and Glenbow-road, for the erection of a church.

Harrow.—HOUSES.—The Urban District Council are to erect 154 non-parlour type houses at Eastcote-lane housing estate. Mr. J. P. Bennett, the Council's engineer and surveyor, has prepared the plans, and is now inviting tenders.

Hendon.—HOUSES.—Plans have been prepared for 25 houses which are to be erected in Elthorne-road, Kingsbury, for the Kingsbury Urban District Council. Mr. R. C. N. Newport, engineer and surveyor to the Council, is responsible for the designs.

Lewisham.—SCHOOL.—A site is about to be secured by the London County Council, for the erection of a school to accommodate 800 children. The site is in Marvel's-lane, on the Grove Park estate, Lewisham.

Stepney.—PAVILION.—Tenders are now being invited for the construction of two new pavilion blocks for bathrooms and lavatories, etc., at the Institution at South-grove, Bow, E.3, for the Stepney Board of Guardians.

Stepney.—PREMISES.—Messrs. F. & H. F. Higgs are engaged upon extensions to the bottling stores at Messrs. Charrington's Brewery, Mile End. Messrs. Young & Co., 6, Queen Anne's-gate, Westminster, are supplying the constructional steelwork.

Strand.—EXTENSION.—Messrs. Greenham, Ltd., have now started the demolition work next to the Strand Palace Hotel, to make way for extensions to the hotel for Messrs. J. Lyons and Co., Cadby Hall, W.6.

Water-lane.—ENLARGEMENT.—Plans are now under consideration by the Court of the Society of Apothecaries for the enlargement of the hall in Water-lane, Blackfriars, E.C.

Watling.—SCHOOL.—The Hendon Education Committee are inviting tenders for the erection of a school on the London County Council Watling estate to accommodate 1,200 children.

ASSOCIATION OF ARCHITECTS, SURVEYORS AND TECHNICAL ASSISTANTS

THE reunion dinner of the members of the Association of Architects, Surveyors and Technical Assistants' Visits Abroad was held on Friday, July 1, at the Coventry Restaurant, London, W. There was present a representative gathering of members and friends who had been members of parties which had visited Rome, Florence, and Provence under the auspices of the A.A.S.T.A. Mr. John Mitchell (general secretary of the Association) occupied the chair. Mr. W. Chester proposed the toast of "The Association," and drew attention to the important work being accomplished by the A.A.S.T.A., not only on behalf of the economic interests of members, but in providing them with facilities for travel at a cost within the reach of all. One advantage was that, with so many minds devoted to seeking the same general end, one missed very little that could be said to have architectural claims. In replying on behalf of the Association, Mr. Mitchell said how important was travel abroad to the modern architect. Progress to-day was swifter than in the past, only because of greater mobility in travel available for large masses of the peoples of the world. Thereby they were provided with the opportunity of examining the best of the world's work and comparing it with their own standards, and the outcome was a friendly rivalry which tended to carry their art or profession towards a fuller expression. Ethics of beauty to-day were more widely appreciated, and there was less toleration for the freak, the fantastic, the crudely ugly, and the sham. For all this, travel was directly responsible. The organisation of these visits by the Association was a sign that the youth of to-day desired to supervise and promote as far as possible the direction of its own education.

A vote of thanks was heartily accorded Mr. P. W. Dawney for the very satisfactory arrangements of the dinner, to which Mr. Dawney suitably responded. The dinner was followed by a programme of music and a dance.

Preservation of Ancient Cottages.

Recent contributions to the Royal Society of Arts Fund for the Preservation of Ancient Cottages include a donation of 500 guineas from Mr. James H. Hyde, an American, who is interested in the movement, an annual subscription of £20 from the Guild of St. George, and donations of 20 guineas from the Skinners' Company, and five guineas from the Lord Mayor of London and the Lady Mayoress. All those who are interested in this effort to save the most beautiful and interesting specimens of our cottage architecture are invited to communicate with the secretary, Royal Society of Arts, John-street, Adelphi.

RATES OF WAGES IN THE BUILDING TRADE

[Every endeavour is made to ensure accuracy, but we cannot be responsible for errors.]

(For rates of wages in the Building Trade in Scotland, see page 148.)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place; where quantities, forms of tender, &c., may be obtained.

Following is a list of abbreviations:—Borough Surveyor, B.S.; Borough Engineer, B.E.; District Surveyor, D.S.; Clerk, C.; Town Clerk, T.C.; County Engineer, C.E.; County Surveyor, C.S.; County Architect, C.A. Surveyor, S.; Engineer, E.; Borough Architect, B.A.; Architect, A.

OBITUARY

Mr. J. H. Kerner-Greenwood.

We deeply regret to record the death of Mr. J. H. Kerner-Greenwood, which occurred suddenly on Sunday last, at Bath, where he was spending a holiday in company with his brother. Mr. Kerner-Greenwood began his business career as a timber merchant, but subsequently founded the firm of Messrs. J. H. Kerner-Greenwood and Co., Ltd., of King's Lynn, proprietors of the well-known product "Pudlo." He was apparently in perfect health quite recently, and his sudden death will come as a great shock to his wide circle of friends. He was a kindly and a generous man, and was never happier than when trying to help others. Of recent years he had lived in semi-retirement at Bishop's Stortford, though he still continued to take an active interest in his business, as well as in matters of public moment, frequently contributing letters and articles of general as well as technical interest to the Press. He was not only a student of literature, but a patron of the arts, and was always ready to give practical assistance and encouragement to young artists and others. The funeral took place on Thursday last at Golders Green Crematorium.

Hampton Court Hall.

After more than four years' work, the repairs to the roof of the Great Hall, Hampton Court, have now been completed. As at Westminster Abbey and St. George's Chapel, Windsor, a complete restoration and reinforcement with girders were necessary, for many of the wooden beams had been eaten almost completely away by the death-watch beetle. Some of the old undamaged beams have been for over six months specially treated with preservatives and replaced, while the new ones have been thoroughly graded to match. A further year's work of reinforcement and replacement has been started on the floor, and when this is completed it is hoped to open to the public more wine-cellars under the Great Hall.

East London Road Scheme.

Negotiations are understood to have reached a satisfactory stage for the advancement of the £4,000,000 scheme for the improvement of the Victoria Dock-road, E. The Government has promised 75 per cent. of the cost, the remaining 25 per cent. to be borne by the London County Council and the local authorities. The road forms part of the main traffic artery from the docks to the City, and is therefore vitally important for London's food supplies. The improved and widened road would begin, says the *Evening News*, from the east end of the India Dock-road, pass over the River Lea to the Barking-road, and turn south-eastwards to Silvertown, along the east side of the London and North Eastern Railway. It would be carried for a considerable distance on arches, thus obviating the many delays to traffic at present caused by swing bridges and level crossings. About 700 houses will have to be removed to make way for the road.

National Trust Annual Report.

The annual report of the National Trust for Places of Historic Interest or Natural Beauty states that for some time past the issue of a public appeal for a general endowment fund has been under contemplation. The object of this fund would be to enable the council to add largely to its present lamentably inadequate general fund and widen still further the sphere of its activities. The Trust feels that the present month is hardly the moment in which to launch such an appeal, since it has on hand so many appeals for particular objects. It earnestly commends to its members, however, the necessity for increased support of its general fund, and expresses the hope that the example of those members who have already made donations of over £1,000 will be widely followed.

TRADE NEWS

Leas Cliff Hall, Folkestone.

We understand that the exterior wall decorations of this building, illustrated in our issue of July 15, were carried out with "Calcarium" Washable Distemper-Water Paint, manufactured by A. T. Morse, Sons & Co., Ltd., of Plaistow, E.13.

We are asked to mention that in this building, illustrated in our last issue, the four electric lifts were supplied and fixed by the Hoisting Appliance Co.

Travelling Exhibit of Radiators.

The Travelling Exhibit of the National Radiator Co., Ltd., fitted with a working installation of the "Ideal" Cookanheat and "Ideal" Classic Radiators, will demonstrate as follows:—July 25, in front of White Horse Inn, Prestwich; July 26, Market Place, Radcliffe; July 27 to August 1, Royal Lancashire Agricultural Show (Stand No. 115), Bolton.

Glassworkers' Outing.

On July 2, a party of over 60 of Messrs. A. Goldstein and Co.'s employees spent a most pleasant day at Margate. Mr. A. Goldstein (who was the guest of the party) at lunch regretted the absence of many of his men, but thanked all his employees for their loyalty, and was pleased to point out that the rapid strides the firm had made was but the beginning of still greater developments.

Rubber Products.

It is officially announced, we learn, that the Goodyear Tyre and Rubber Company of America will manufacture tyres, tubes and rubber products in England, the Goodyear Tyre and Rubber Company (Great Britain, 1927), Ltd., having just acquired large factory buildings on a site of some 22 acres located at Wolverhampton. Enlargement of the buildings and the installation of machinery and equipment of the latest design will begin immediately.

A Roads Representative for Leeds.

Major H. A. Butterfield, A.M.Inst.C.E., P.A.S.I., has recently been appointed as Roads Representative for the British Reinforced Concrete Engineering Company, Ltd., for the Leeds area. Major Butterfield has been connected with reinforced concrete road-work for some years, and his experience and knowledge of the subject will doubtless be of service to engineers who require information on any point relative to the latest and most up-to-date forms of road-making. The address of the Leeds office of the British Reinforced Concrete Engineering Company, Ltd., is 5, East Parade.

Building Firm's Sports.

On Saturday, July 16, Messrs. Trollope & Colls, Ltd., held their fifth annual sports on their own ground at Grange-lane, Dulwich. Among the large gathering were Messrs. A. B. H. Colls, C. C. Trollope, F. G. Trollope and C. J. Trollope, directors of the firm. Mrs. A. B. H. Colls presented the prizes. The Camberwell branch of the firm, under the direction of Mr. R. Hurst, were responsible for the lay-out of the ground. The firm's own band, under the name of "Trocoll Orchestral Band," played selections during the afternoon and dance music in the evening. A very enjoyable afternoon was spent, and if the weather was not all that could have been desired, there was no lack of good will.

Domestic Electric Appliances.

We understand that in order to draw attention to the labour saving to be effected by the use of household electric appliances in the home, the Willesden District Council Electricity Department have arranged to give an active demonstration of "Magnet" Household Electric Appliances in their showrooms at 131, Salusbury-road, Kilburn, N.W.6, from July 19 to 30 inclusive, from 10 a.m. to 6 p.m. The "Magnet" appliances to be shown will cover the range illustrated in the enclosed booklet entitled "Door to Comfort in the Home." Demonstrators will be constantly in attendance, not only actively to demonstrate the various appliances, but to answer questions, and to give any information regarding initial cost and cost of running.

PROPOSED NEW BUILDINGS & OTHER WORKS*

IN these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owners taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations: T.C. for Town Council; U.D.C. for Urban District Council; R.D.C. for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; B.C. for Borough Council; P.C for Parish Council; M.H. for Ministry of Health; M.T. for Ministry of Transport; C.B. for County-Borough; B.E. for Board of Education; M.A.B. for Metropolitan Asylums Board; and M.W.B. for Metropolitan Water Board.

FOLLOWING is a list of abbreviations:—Borough Surveyor, B.S.; Borough Engineer, B.E.; District Surveyor, D.S.; Clerk, C.; Town Clerk, T.C.; County Engineer, C.E.; County Surveyor, C.S.; County Architect, C.A.; Surveyor, S.; Engineer, E.; Borough Architect, B.A.; Architect, A.

THE HOUSING SUBSIDY

A DEMAND for the continuance of the housing subsidy was made at a conference of delegates from County Councils, City and Town Councils, Urban and Rural Councils, Housing Associations, and Trade Unions from all parts of the country, at the Central Hall, Westminster. The conference was called by the National Housing and Town-Planning Council to "consider the whole housing situation from the national standpoint, and to decide what steps, if any, shall be taken in the matter of approaching the Government thereon."

Mr. F. M. Elgood, the chairman, said that the National Housing and Town-Planning Council had sent a deputation to wait on the Prime Minister to ask for a retention of the subsidy until at least the next revision period, October, 1928. The deputation was unsuccessful, and it was decided to reduce the subsidy after October.

Several delegates said it was now possible to build houses for £27 10s. per house less.

Mr. T. Barron, President of the National Federation of Building Trade Operatives, said that in addition to the actual effect of the provision of houses or reduction of the subsidy, there was also the effect on the building trade itself. The industry had done more than its share. It had built more houses than it had been called upon to build, and had brought 69,000 new men into the industry, including 20,000 apprentices, especially because of the pledges given by the Government. These people must be considered, as well as the number of houses erected, and the withdrawal of the subsidy at the moment was absolutely unjustified. The following resolution was carried:—

"This conference expresses its firm conviction that the houses required by the working classes cannot be provided without adequate State assistance, and accordingly directs the executive of the National Housing and Town-Planning Council to make immediate representation to His Majesty's Government with the object of obtaining the cancellation of the Housing Acts (Revision of Contributions) Order, 1926, so that the present subsidy for houses erected may be continued until the date of the next statutory review."

NEW BUILDINGS IN SCOTLAND

Kirkintilloch.—HOUSING.—The Town Council has resolved to ask the approval of the Board of Health to the erection of 36 additional houses on the Back o' Loch housing site.

Arbroath.—EXTENSIONS.—The Dean of Guild Court has passed plans for an extension of the Arbroath Electric Light and Power, Ltd., of their works, consisting of a new battery-room.

Girvan.—HOUSING.—The Town Council has authorised to arrange an interview with the Scottish Board of Health to discuss the possibility of erecting 20 houses of two apartments in Piedmont-road, and also houses in Vicarton-street. It has been agreed to erect three four-apartment houses in Old-street.

Bo'ness.—HOUSING.—The Town Council are proceeding with another instalment of their housing scheme by building a number of two-roomed and kitchen houses on ground acquired at Richmond.

Dundee.—BUILDINGS.—Plans and sections of proposed new buildings which have been lodged at the office of the city engineer are as follows:—Clepington-road, factory for the North British Linoleum Co., Ltd.; and Seagate, additions for Langlands & McAinsh, Ltd. Mr. R. Gibson, of India Buildings, is the architect.

Edinburgh.—HOUSING.—The Corporation has been granted warrants by the Dean of Guild Court to build 12 houses in Willowbrae-road, and 24 at Lochend.—The Edinburgh Academy were authorised to make an addition to the pavilion at the sports field, Inverleith.

Dundee.—HOSPITAL.—The Dundee Royal Infirmary has received a gift of £28,000 towards the endowment of a maternity hospital which is to be erected.

Ayr.—HOUSING.—The Board of Health have intimated to Ayr Town Council that they may now accept tenders for the proposed new housing scheme at Lochside. The scheme comprises 368 houses.

Architecture Medal for Scotland.

With a view to encouraging excellence in architectural design in Scotland, the R.I.B.A. award a quinquennial Bronze Medal for a building of outstanding merit erected during the past five years, ending December 31, 1926. The Medal and Diploma have been awarded for the period in question by the Incorporation of Architects in Scotland to Messrs. Watson and Salmond, F.R.I.B.A., for the Glasgow Municipal Buildings Extension, 1927, and this Bronze Medal and Diploma were presented to Messrs. Watson and Salmond at the General Meeting of the Incorporation held at Elgin on June 3.

The Cost of Building Materials.

Following a disagreement, it is stated, between the National Light Castings Assocn. and National Federation of Builders' Merchants, a price maintenance agreement which has been in force for some years comes to an end. The Association's now scheduled reduction of 15 per cent. will mean, it is stated, a saving of about £4 10s. on a £1,000 house, and about £3 on a subsidy house.

Mr. J. W. Comben, President of the Federation, according to the *Daily Mail*, says that the fact that house builders have been buying most of their light castings in cheaper markets has led to the present decision of the Association. In a statement issued, the Association announced they are desirous of loyally supporting British manufacturers to the fullest extent possible. "They earnestly hope that British manufacturers will take heed of the gravity of the situation and make a supreme effort to get down costs somewhere in the region of imported material, so enabling both merchants and consumers to buy British goods."

Forthcoming Publication.

Messrs. Batsford announce for forthcoming publication a second and enlarged edition of "Drawing, Design, and Craftwork," by Mr. Frederick J. Glass, A.M.C., L.I.F.A., Headmaster of the Doncaster School of Art. Professor Allen W. Seaby, who is the head of the Art Division of the recently constituted Reading University, is also publishing, through Messrs. Batsford, the revised and enlarged edition of his standard handbook on "Drawing for Art Students and Illustrators."

BUILDING TRADE WAGES IN SCOTLAND.*

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXXIII. No. 4408. JULY 29, 1927.

THE LONDON SQUARES

THE recent announcement by Mr. Neville Chamberlain that the Government is about to appoint a Royal Commission to advise on the preservation of the London Squares, has excited considerable interest. It is to be hoped that the personnel of the Commission will be sufficiently varied and will include not only those who have direct interest, either as owners or tenants, in the use of the squares, but a goodly number of those who stand for the London public at large. For after all, looking to the distant future—if the right thing is to be done—we have to legislate for a time and for conditions of which we do not know the exact character. We have to exercise imagination and deal with the squares in association with other problems that are over-ripe for solution; such as housing, wheeled transport and pedestrian traffic, resting places for the old and playing grounds for the children; whatever their use, the squares must remain open-air spaces.

The squares of London fall into two general classes which may be called, respectively "grand" and "modest." The dividing line between the two groups cannot be clearly marked, but the extremes are easily recognisable. The "grand squares" are the older places originally designed as entirely residential, at the head of which stood some great mansion of the aristocracy, while the remaining three sides were taken up by smaller houses let, in all probability, to the landlord's friends, supporters and dependants. The mansion would have large grounds back and front, but the other houses would be provided with comparatively small gardens in the rear, while the railed square itself provided an exclusive area for the use of the tenants who were each provided with a key. It is difficult now to be sure how far these garden squares were actually used by the tenants or made into common places of amusement. In some countries they would have been crowded; in London it is probable they were regarded, as they are still, as little paradises for the few who generally congregated elsewhere, conducted in Sedan chairs or carriages. Near to the grand squares were, necessarily, the mews and stables, and at convenient distances apart, the shops and retail markets.

In process of time some of the grand squares have become changed as to the use of the houses; the mansion has disappeared, the social enclave has dissolved, and the houses, now too large to be rented by a class once remarkably wealthy, are let for professional, institutional and commercial purposes. The change in user has probably maintained the value of the property and, in some instances, increased it considerably. Russell Square is, perhaps, the type of the completely transformed square; yet it is still "grand" in a new way and would be nothing if it were not for the garden it contains, which all may enjoy with their eyes and some by the right of entry.

The "modest square" has somewhat different history and destiny. Originally a smaller copy of the more splendid pattern, without the dominating mansion, it had the same architectural charm, an exclusiveness of its own, and its central garden; it was entirely residential. Rents were lower, and, perhaps, there were no adjacent mews, for the tenants walked on foot or took an occasional hackney carriage. Squaredom, as a whole, was a feature of London and was imitated with less success in Bath and Edinburgh. In the Metropolis it was a kind of solution to the housing and transport problems of the day, forming a little garden settlement within the town itself.

But the transformation of the modest square has not been so happy as that of its grander partners. Many have "gone down" in the social scale for reasons external to themselves. Some, bearing great names, would now be disowned by the princely and lordly persons who became their patrons a hundred years ago. Hotels, boarding houses, lodging houses—passing imperceptibly into each other—are found in some of the modest squares in central London. Others in the inner suburbs remain quiet and dull, and show signs of decline. But their gardens remain, even though neglected, as physical open spaces, except in a few cases.

The forces that have invaded a few of the grand squares and more of the modest ones are accumulating inevitably for a concentrated attack. It is not consciously directed as yet, nor can it be regarded as a conspiracy. The fact is the garden squares are a strong temptation. Owners see, in some instances, that to commercialise their squares will bring to them richer tenants who will raise the value of the estate while changing its character. This is true of both grand and modest squares. Finally, the eyes of speculators are fixed on the green gardens; they think the space is "wasted" and design to build there certain flats, mansions or even "gardens," as they will dare to call them, after the gardens have gone. The movement began with Polygon Buildings in Clarendon Square, Somers Town, and continues with a factory in Mornington Crescent, a place of worship in Endsleigh Gardens, and only recently was intended to continue with a market on the Foundling Hospital site. The movement is checked, but not yet under control. The motoring community see in the garden squares new parking-stations for their vehicles, and the congestion of traffic supplies them with an argument.

There are at the moment 435 garden squares, with an area of 445 acres. Of these about 381 are in danger, or too lightly protected from spoliation. In town-planning, London has an instrument in its hands which should enable it to preserve these beauty spots, these healthy air-spaces, for uses which may become more valuable as time goes on. In other sites, it must be remembered, great blocks of dwellings, for rich as for poorer tenants, are being rapidly built and with every such monster, invading the cubic space which is London, the older green gardens become more hygienically important. As London is subjected slowly to the process of decentralisation, the town planners of the present and the immediate future will see in these squares a ganglionic system of ventilation and amenity which should be extended rather than diminished. In that day we shall bless the lords of Bloomsbury and Belgravia.

The welfare of the generations of London children who play in the streets and sit in the doorways of their dismal dwellings, might well be reconsidered. Perhaps it is too much to expect that the London squares can be made into playgrounds in the fullest sense. But some share of the amenity which preservation will ensure should be given to the children who, of all people, most need and appreciate the benefits of nature's beauty, sunlight and air.

Into the difficult question of compensation to landlord or tenant, necessary to secure complete protection, it is not wise now to enter. It is well to remember, however, that the gardens were expected to remain uncovered and were regarded as an added amenity to the tenancies. It is no exaggeration to say, therefore, that the tenants of houses in London's squares have, by their yearly rents, already compensated the owners of the gardens who, it may be thought, hardly have the right to demand large damages afresh, even should they wish to do so.

H

NOTES

Street Advertising. Some features in the Advertising Exhibition at Olympia have evoked public commendation, certainly well deserved in the case of coloured posters, upon which high artistic skill has of late years been bestowed; and it is satisfactory that Sir Reginald Blomfield should have acted for the British Poster Advertising Association in designing hoardings for the exhibition. A correspondent expresses the wish that all street advertising should be confined to hoardings, so that buildings might be free from the disfigurements which are too abundant. This is too much to hope for, but advertising firms would often find it profitable to consult architects, who would be able to advise them how best to obtain the publicity they desire without marring the architectural effect of buildings. As things are, restrictive regulations are to be desired. The London Building Act, 1894, prohibited sky signs. Will the next Act go a step further?

The King and Queen at Liverpool. For the recent visit of the King and Queen to Liverpool the decoration of Castle Street—the main street which leads up to the Town Hall—was entrusted to the Liverpool School of Architecture. It was decided that, owing to the overhead tramway wires, which did not permit of anything being placed above or below them, a scheme of pylons was the most suitable treatment. A sketch design competition was then held in the school for the pylons, and the small prize offered was given by the School Jury to the design of Mr. Laurence Wright, a third-year student. His design was accepted by the Corporation and carried out by Mr. G. Robinson, of the Ark, Liverpool, the theatrical scenery maker. The illustrations which we give (pp. 155 and 160) show Mr. Wright's twelve-hour sketch competition design and the work as carried out. It is not often that an esquisse-esquisse is translated in fact, and so quickly. The decorations of other streets were designed by the Liverpool School of Art, The Liverpool Academy of Arts, the Liverpool Sketching Club, the Sandon Studios, and Mr. Percy Corkhill.

The British Academy at Rome. The recent visit of Professor Antonio Sciortino, Director of the British Academy at Rome, to London was directly connected with a very interesting development in that institution. The British Academy—which is entirely distinct from the British School at Rome, and goes back to nearly a century of useful art work in that city—has always given to the Italians, properly introduced, the advantage of its evening classes free of charge; and among those who have used it are such world-famed artists as Mancini, Tito and Aristide Sartorio. In appreciation of this hospitality, the Municipality of Spoleto has recently presented a piece of land to our Academy for placing there a summer school; and now there has come forward a yet larger scheme within Rome. It is now under consideration to make a permanent home within, developing and extending the present premises in Via Margutta, for approved students from the great Dominions of the British Empire, allotting to each Dominion which comes into the scheme one fairly large studio, with the necessary living accommodation for two students, for a period of four or five years, free of any charge except their actual living expenses. Artists of repute would instruct the students in each branch of art, and the membership of the Academy would open to them the artistic society of Rome, beside free entrance to her Museums and Galleries. The sum required to carry through this scheme is estimated at about £40,000—a large sum, but it would be for an organisation in perpetuity, and would carry great advantages. The project has been well received by the London Press, and a strong Committee is being formed in London to further its aims.

Church of Stechovice, near Prague: Reproduction of Ancient Style, by Kamil Hilbert.

Petrol Pumps. From time to time we have referred to the unsightliness of petrol pumps. It was with a feeling of gratitude that we read the notice of the British Petroleum Co., that they had decided to have the whole of their pumps painted green. This colour was decided upon, we learn, as the result of very careful experiments. We have now had the opportunity of seeing a number of these pumps in their new colour, and

General View of Prague.
(See article on page 158.)

we cannot think there can be any question about the decided improvement. The B. P. Co. earn our thanks for their action.

Rewards and Penalties. Upon the subject of petrol pumps, a correspondent writes to say that he marks his appreciation of the B. P. Co.'s efforts by making a point of buying their motor spirit. He goes on to observe that he hopes other motorists will do the same, but ends on rather a gloomy note by adding that motorists as a class are rather a hopeless lot. "They go out to seek beauty, and by every known method they destroy it. Every single appeal connected with the trade must be hideous before it will appeal to the motorist. The duty of trying to protect the amenities they leave to others." We are pleased to note that he, at all events, is endeavouring to prove to an unbelieving world that ugliness in appeal is not an essential in successful trading.

A View of Tabor, Czecho-Slovakia. (See article on page 158.

The Austrian Exhibition. There is just now to be seen in Paris an exhibition of much instruction for the mural painter, in the decorative planning of compositions for large wall spaces, with appreciation of the relation of mural art to architecture, in which the qualities of unrelieved plain spaces, in one place, emphasise the elaboration of detail elsewhere, and contrast so well with it. In the Musée du Jeu des Paume this collection of Austrian mediæval art contains what must be almost a unique collection of water-colour drawings, the work of Albert Durer and other artists, and represents the Triumph of Maximilian. For composition, colour and decorative splendour, treated with great spirit and intimacy, the collection is most interesting, and to the architect no less than for the mural painter there is much both to delight and instruct.

"Architecture": Scottish Memorial Number. Much interest has been displayed amongst architects and laymen in the Scottish National War Memorial, recently opened by H.R.H. the Prince of Wales. This Memorial—the work of Sir Robert Lorimer, A.R.A.—is more than a shrine expressive of Scottish national reverence for those who fell in the war: it is a treasure house of modern Scottish architecture, sculpture, stained glass, ironwork and decoration, enthralling in its character and encouraging in its promise of the regeneration of national arts from the melting-pot of an age of commerce. In the current number of *Architecture* will be found a full record of this Memorial. Critical descriptions of both exterior and interior are contained, together with some explanation of the symbolism bound into the building, and a graphic account of the opening ceremony. It may be of interest to add that the first edition of this issue of *Architecture* has already been sold out and that a second edition is now being printed.

Old English Villages. On another page will be found a letter from a correspondent containing the suggestion that there should be put on record some selected examples of the charming villages and hamlets in which England formerly was so rich but which are now altering in character—and for the worse—so very rapidly. Our correspondent briefly outlines the manner in which this compilation might be effected, and we commend his letter to some author with the time and taste necessary for the fit selection of villages. This is an opportunity for performing a greatly needed work that in a few years' time may be impossible of execution.

Street Decorations, Castle Street, Liverpool.

Designed by Mr. Laurence Wright, Liverpool University School of Architecture.

GENERAL NEWS

Professional Announcements.

Mr. H. J. Birnstingl has removed to Greenacre, Bledlow Ridge, West Wycombe, Buckinghamshire. Telephone: Radnage 11.

On August 2 the office of Mr. B. Greig, M.I.Struct.E., A.R.I.B.A., District Surveyor for St. Marylebone, East, will be transferred from 18, Baker Street, to No 1 Newman Street.

Mr. George Rodley, surveyor and sanitary inspector, at Wells-next-the-Sea, Norfolk, has been appointed to the post of Borough Surveyor, South Molton, Devon, rendered vacant by the appointment of Mr. G. K. Foster as Surveyor to the Ilminster (Somerset) Urban District Council.

R.I.B.A. Maintenance Scholarship in Architecture.

The Board of Architectural Education of the R.I.B.A., in conjunction with the Artists' General Benevolent Institution, offer for award in September, 1927, a Maintenance Scholarship of a maximum value of £100 tenable from October 1, 1927. The Scholarship will be tenable in the first instance for one year, and will be renewable for two further periods of one year each. It is intended to enable the orphan of an architect or artist, or son or daughter of an architect or artist, who has not the necessary means, to attend an approved course at one of the Schools of Architecture recognised for exemption from the R.I.B.A. Examinations. Students who are already taking such a course would not be eligible to apply for the Scholarship. The value of the Scholarship, up to the limit of £100, will depend upon the financial circumstances of the parents or guardians of the candidate. The parents or guardians will be required to furnish particulars, on the proper form, of their financial position.

Full particulars of the Scholarship, including the method of application and selection of the candidate, may be obtained from the Secretary to the Board of Architectural Education, R.I.B.A., 9, Conduit-street, W.1, not later than August 20, 1927.

Bartlett School of Architecture.

The following awards have been made in the Bartlett School of Architecture at University College:—

Bartlett Entrance Exhibitions: M. J. H. Goodchild, Tollington School, Muswell Hill; C. P. Saurin, St. Ignatius' College, Tottenham; *equal*, F. E. Kerswill, Whitgift School, Croydon. (Conditional on passing matriculation examination in Latin in January, 1928.)

Donaldson Silver Medal: A. C. Light.

Prize for Design in Ferro-Concrete: H. Kendall, B. W. Johns.

Ronald Jones Prizes: Mediæval Architecture, H. F. Hoar; Renaissance Architecture, J. K. M Sanderson.

The Builder Prizes: Senior, C. W. J. Smeed; Junior, Margaret A. de Quincey. (Awarded first term, 1926-27.)

Architects' Journal Prize for Design: P. A. Wailes.

Herbert Batsford Prize: D. A. Stewart.

Certificates in Architecture: H. G. Coulter, L. E. King, W. F. B. Lovett, Phyllis E. Mitchell, D. E. Nightingale, V. M. Patker, C. W. J. Smeed, E. E. Somaké, P. Soskin, Patricia B. Webster.

Sub-Department of Town-Planning: Certificates, A. W. H. Brown, D. H. Buckley, L. P. Ellicott, R. G. Grice.

The Liverpool Cenotaph.

Mr. Leonard Barnish, in the course of a letter to the "Liverpool Post," comments upon the magnificent spectacle presented by the recent Royal visit to St. George's Hall. "After speeches in the great hall," he continues, "the Royal party returned to the plateau, inspected the parade of ex-Service men and others, and chatted with various military and civic persons. This made a very pleasing function, but one which would be utterly shorn of all its spectacular charm should the centre portion of the plateau be occupied by a monument of any kind. The Royal visit has provided the illustration to fit the moment—leave the plateau as it is, open to stage the historic happenings of the city and to serve the many other minor occasions where pageantry, both military and civic, counts for so much."

Canterbury Cathedral Preservation Fund.

A society of people who are prepared to take some share in the care and preservation of Canterbury Cathedral—to be known as the "Friends of Canterbury Cathedral"—has been founded by the Dean and Chapter of Canterbury. To become a Friend, an annual subscription—a minimum five shillings—is necessary, and it is of particular satisfaction that the Prince of Wales is to-day the first Friend entered on the roll. The Cathedral architect, Mr. W. D. Caroe, has given the Chapter a survey of the Cathedral's needs, which will require a very considerable outlay of funds, far beyond the resources of the Chapter alone, and much time to carry out. Particulars and forms of application for membership may be obtained from the Steward of the Friends, Sir Anton Bertram, The Precincts, Canterbury.

The Strahov Church and Monastery, Prague.

(See article on page 158.)

COMPETITION NEWS

COMPETITIONS OPEN.

Municipal Buildings and Business Premises, Herne Bay. Premiums: £150, £100 and £50. Professor A. E. Richardson, F.S.A., F.R.I.B.A., assessor. Apply Clerk to Council, Westminster Bank House, Herne Bay. Deposit of £1 1s. required	Particulars published in Sending "Builder," in date.	
Municipal Buildings, Wimbledon. Premiums: £200, £150 and £75. Mr. H. V. Ashley, F.R.I.B.A., assessor. Apply Mr. Herbert Emerson Smith, LL.B., Town Clerk. Deposit of £2 2s. required, ...	July 8	..
	July 15	Nov

Municipal Offices, Beckenham.

Mr. Septimus Warwick, F.R.I.B.A., the assessor in this competition, has reported that 67 designs have been received in the preliminary competition, and recommends that the following architects be invited to take part in the final competition:—Mr. W. Naseby Adams, A.R.I.B.A.; Mr. Harold G. Cherry, F.R.I.B.A.; Messrs. Cecil E. M. Fillmore, A.R.I.B.A., and A. Malcolm McKewan, A.R.I.B.A.; Messrs. H. V. Lanchester, F.R.I.B.A., Geoffrey Lucas, F.R.I.B.A., and T. A. Lodge, O.B.E., A.R.I.B.A.; Mr. T. R. Somerford, A.R.I.B.A.; Messrs. E. Berry Webber, A.R.I.B.A., and J. G. Cheadle, A.R.I.B.A. Designs for the final competition have to be sent in by October 15.

Shakespeare Memorial Theatre.

Seventy-four designs have been submitted by British, American, and Canadian architects for the preliminary round in the competition for the rebuilding of the Shakespeare Memorial Theatre, Stratford-on-Avon. The assessors, Mr. E. Guy Dawber, P.R.I.B.A., Mr. Cass Gilbert (President of the National Academy of Design of the United States of America), and Mr. Robert Atkinson, F.R.I.B.A., have selected the following competitors to take part in a final competition:—Miss E. Scott, 15, Gordon-square, W.C.; Mr. R. Derrick, 120, Madison-avenue, Detroit, Michigan; Messrs. A. R. Mohr and Benjamin Moscowitz, 25th Floor, Pershing-square Building, New York; Mr. A. J. Rousseau, 2,001, Vinewood-boulevard, Ann Arbor, Michigan; Messrs. P. Tubbs, Son & Duncan and S. Rowland Pierce, 15, Gower-street, London, W.C.; and Mr. D. F. Martin-Smith, 45, Bloomsbury-square, W.C. Designs have to be sent in by November.

Bognor Council Offices.

Mr. Septimus Warwick, F.R.I.B.A., the assessor in this competition, has made the following awards:—First, Mr. Charles Cowles-Voysey, 14, Gray's Inn-square, W.C. 1; second, Messrs. Clayton & Black, 10, Prince Albert-street, Brighton; third, Messrs. Adshead & Ramsey, 46, Great Russell-street, London, W.C. 1.

Public Elementary School, Guildford.

Guildford Local Education Authority invite architects to submit designs for a new public elementary school at Bellfields. Particulars may be obtained on application to Mr. F. S. Tosswill, Secretary, Guildford Education Office, on deposit of £2. Mr. Henry W. Allardyce, F.R.I.B.A., is the assessor. Designs have to be sent in by September 30.

Competition of Industrial Designs, 1927.

A selection of the designs received in this competition for prizes and scholarships offered by the Royal Society of Arts and well-known manufacturers will be exhibited, by permission of the Board of Governors, in the Indian Pavilion of the Imperial Institute, South Kensington, from July 30 to August 31, every week-day from 10 a.m. to 5 p.m. (Sundays 2.30 to 6 p.m.). The exhibition is open free of charge; no tickets are required. It will include designs in architectural decorations, textiles, furniture, etc.

The Tyn Church, Prague.

(See article on page 158.)

CZECHO-SLOVAK ARCHITECTURE.

By GEORG BRÖCHNER.

Prague is an ancient city, though the capital of what may be called a new country or rather, perhaps, a State of recent creation. But it is one of the most picturesque and fascinating cities in Europe, in the architecture of which many centuries are represented by striking examples expressive of the style of different periods. Over many of these old buildings, whose charm is enhanced by their historic associations, there is a striking elaborateness of great decorative effect which is in full harmony with the national character, often inspired by dramatic incidents in the annals of the nation.

Our illustrations, necessarily, where so much of interest is available, have been chosen more or less at random, but they give a fair idea of the extreme attractiveness of the city. The illustration on page 154 presents a charming view: extending on both sides of the Ultava, it has been called "Golden Prague" or "Prague with the hundred towers." But not only the building, but also its bridges are possessed of vast interest and rare beauty; where, for instance, does one find a more characteristic and picturesque bridge than the Charles Bridge?

The most commanding complex is that of Hradcany (the Castle of Prague), which dominates the city and which for centuries was the residence of the kings of Bohemia, as it is now that of the President of the new Republic. Both the castle and the cathedral of St. Vitus illustrate various periods of Bohemian architecture, and bear out the saying that Prague is "the history of the Czechoslovak nation writ in stone." The Czechs have been a splendour-loving people, to prove which it is only necessary to illustrate one of the six hundred apartments of the castle, the Spanish Hall. It is said to be the largest gala hall in central Europe, and it is magnificently decorated. For several centuries it was never used, but it came to its own again when President Masaryk, in 1919, took up his residence there as head of the newly-formed Republic, to a great extent his work.

Of the sterner type is Tabor, the historical seat of the Hussite movement, and whose round tower and surrounding wall still have the true medieval stamp.

The Strabor Church and monastery are both endowed with exceptional interest, from the architect's, as from the historian's point of view. The monastery dates back a thousand years or more, and it played an important part in the religious developments of the Middle Ages. The library is one of the richest and oldest in central Europe, containing a wealth of priceless ancient books and manuscripts. The ceiling is beautifully decorated with frescoes, and a famous organ is another wonderful treasure, a witness of the marvellous craftsmanship of past ages.

The Tyn Church derives its name from the palisade which used to surround it, and it played an important part in Bohemia's religious conflicts. It is one of the most striking buildings in the Old Town Square in Prague, and dates from the fifteenth or sixteenth century. On our illustration is shown a highly interesting medieval building, one of the many Prague possesses.

Whilst in much of Prague's architecture there are traces of certain influences from Eastern neighbours, there is an example of Italian style having made itself felt in the building in the park of the Valdstern Palace, Prague, whilst old Czechoslovak types have inspired the architect, Kamil Hilbert, in the design of the handsome church of Stechovice near Prague. It is a harmonious building, in which a certain simplicity of line is relieved by self-contained but effective decorative features.

As an interesting exponent of modern Czechoslovak architectural efforts, the Museum at Kralove Hradec, will admirably serve its purpose. It was designed by the late Jan Kotera, and is possessed of no mean impressiveness and originality.

This short survey of some famous Czechoslovak buildings appears simultaneously with a large and highly interesting exhibition of Czechoslovak Graphic Art being held at the Royal Institute Galleries in Piccadilly. The exhibition closes at the end of this month.

The Museum at Kralove Hradec, Czecho-Slovakia.
The Late Ian Kotera, Architect.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

Professor Lethaby's Articles.

Sir,—I trust you will grant me a brief space in your instructive journal to say how deeply I have enjoyed Professor Lethaby's articles which appear from time to time in its pages. For many months I have thought of doing so, but his last article in your issue of July 8 on "Parthenon Studies" has so fascinated me that I can delay no longer. It is so lucid that it reads like a working drawing in words.

While wintering in Rome in 1904 I called on the late Professor Lanciani, Minister of Fine Arts for Italy, and in our talk of the great ones in the architectural world he spoke of Professor Lethaby in terms of the greatest reverence. There is no man living to whom the profession owes a greater debt of gratitude. I have read everything he has written that I can lay my hands on, and as a humble student and admirer of his expositions I would like, through the medium of your pages, to pay my little tribute.

I earnestly trust that his recent writings on "Tombs," "Ironwork," and "Parthenon Studies," etc., will be published in book form for the help and guidance of students of our noble profession.

Edinburgh. William Davidson.

Old English Villages.

Sir,—There is much evidence to-day of an ever-widening appreciation of the beauty and charm of the old-world village, and architects and gardeners are finding new sources of inspiration and suggestion in them. It has often occurred to the writer that there is a need for a book describing in detail selected examples of typical old English villages, the work being designed principally for the use of architects, town-planners, and landscape gardeners. Although nearly all these old villages grew in very haphazard fashion and with but little relation to ordered arrangement and definite plan, nevertheless each of them, in part or in whole, furnishes suggestion of direct and practical utility for all who are engaged on schemes for new garden suburbs, villages, and town plans, and are at the same time endeavouring to recapture for modern purposes the charm that dwells in the old places.

It would appear to be desirable that the work should contain the undermentioned particulars collected from a dozen to a score of the finest extant examples of unspoilt old villages:—the ground plan, ground contours, roads, buildings, gardens, streams, and general lay-out, in the case of each village.

Hradcany, the Castle of Prague.

The exteriors of churches, houses, and other buildings, etc., could be illustrated by photographic reproductions, and the same method can be employed to show any important features, such as, for example, unique gardens, plantations, bridges, and picturesque spots, etc.; and, of course, there would be in addition the necessary accompanying letterpress. It may be observed in passing that it is not essential for the purpose in question to include any views or particulars of the interiors of the buildings unless, of course, the author decided to seize the opportunity to cover a wider field.

It is true that the ground plan of any village is to be found in some detail on the large scale maps produced from the data of the Ordnance Survey, and hence the basic information required is already accessible to anyone proposing to write a book of the kind considered here; but a compilation containing the matter mentioned above would, of course, involve much additional work, for the further information needed has not, it would seem, been published, or, if published, is not in an easily accessible form.

This book should make an appeal, not only to those mentioned above, but also to artists and a large and varied body of general readers.

T. W. MacAlpine.

The Menin Gate.

Sir,—Will you allow one who has been a reader of The Builder for 65 years to express an opinion on this memorial? I know, like and respect the eminent architect who has designed the Gate, but why give us a piece of an Italian Palace when in Ypres? A Gothic gate would have so much better accorded with the Cloth Hall and other buildings? What do your readers think?

Goth.

London District Surveyors.

Sir,—I hope that at least half a dozen young architects will qualify for the post of London District Surveyor by examination in October next. The districts at first awarded are small, but promotion soon comes. There is a shortage of candidates, and it is rumoured that some recent appointments have not been architects. Surely a small district is better than being assistant to a Borough Surveyor, which appears to be the fate of so many young men.

Observer.

The Spanish Hall, Castle of Prague.

LIVERPOOL SCHOOL OF ARCHITECTURE.

ANNUAL EXHIBITION OF STUDENTS' WORK.

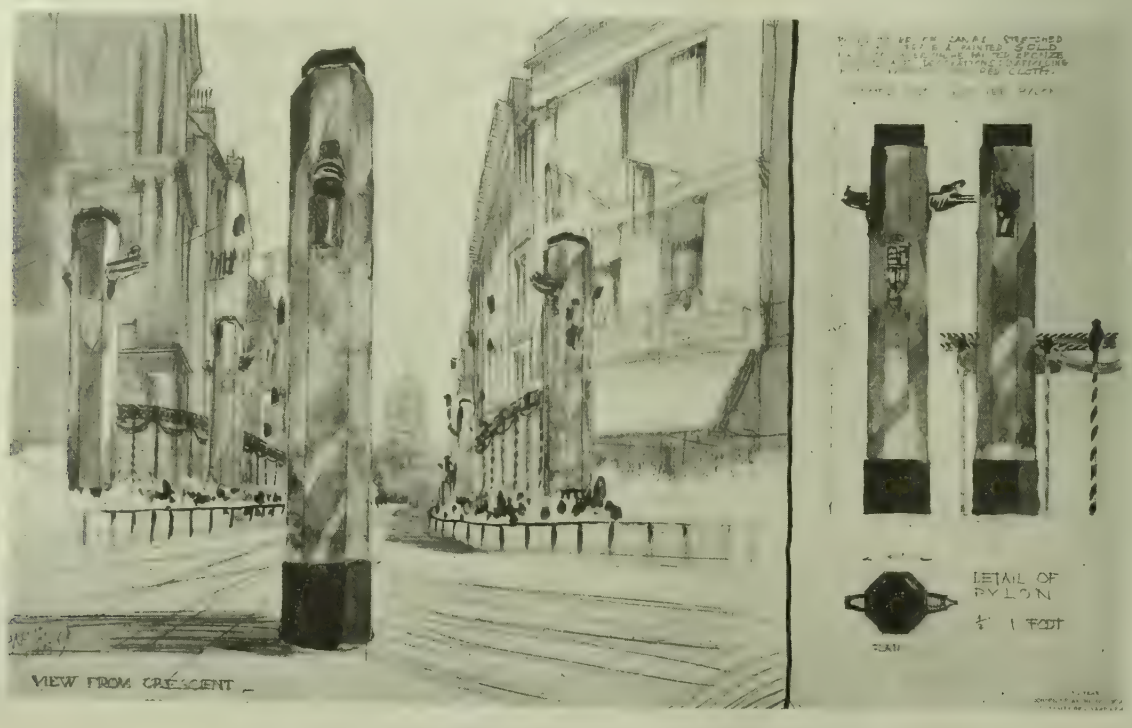
By H. A. D.

The exhibition of the work of the students of the Liverpool School of Architecture, which is held annually in the Liverpool Art Gallery, was opened this year by Mr. Gordon Selfridge. Mr. Stanley Baldwin, the Prime Minister, who was to have honoured the school by the performance of this function, was unfortunately prevented from being present. In his address to the students Mr. Selfridge was good enough to give some account of architecture as it appears to those who are, as he put it (allowing himself, as one fully qualified, to use a commercial metaphor) "on the other side of the counter."

It will be admitted that Mr. Selfridge has a right to speak from that point of view, having dealt with the planning of some of the most important store buildings in this country and in America. If one did not say more, while on the subject, less than justice would be done to Mr. Selfridge, for his interest is not in the planning alone but also, as is obvious, in the elevational treatment and architectural character generally of his buildings. That his firm stand against the type of shop front that is all plate-glass below and rusticated masonry above, is well known. Mr. Selfridge spoke with an intimate knowledge of architecture's problems as well as its pleasures. Turning to the exhibition itself, one is again struck most forcibly by the high standard achieved throughout. While, of course, one realises that in an exhibition of this kind a selection is made, the general impression is that there is abundance of good work to choose from, and that the drawings actually on view give a fairly representative idea of the year's work. Great credit is due to the organisers for a careful arrangement of the drawings, which adds very greatly to the pleasure to be derived from the exhibition. Amongst the First Year work, Mr. N. W. Goodacre shows some good drawings, one, particularly, illustrating Roman lettering. The originator, if such a person exists, of the isometric section, is deserving of a warm place in the hearts of First Year students, for nothing, as several careful drawings show, could give them a clearer insight into the intricacies of vaulting than a view isometrically drawn looking up into the roof of a basilica or a cathedral.

The work of the Second Year students is always made delightful by numerous compositions of the Orders or of fragments of architecture. Mr. Mortar's drawing of the Roman Ionic order is certainly one of the best in the whole exhibition; boldly drawn and rendered, it has caught a good deal of the strength and vigour of Roman detail at its best. The façade of Whitehall and fragments of his other work, drawn as a tribute to Inigo Jones, is a very delicate piece of work and deserves great praise. Uncoloured pencil drawings are an ideal medium for the illustration of Italian renaissance detail, and the church furniture of that period dealt with in this way most convincingly delineates the richness of carved wood and stone.

The Second Year student is also noticeably good in design. Five or six schemes for a small country church show much individuality of thought. While the nature of the subject demands that the plans are all very similar, the external treatment differs in a remarkable degree. One church which has the distinctive characteristics of the Spanish Mission type, would not look out of place in many a village in this country, seeming for some reason less exotic than the more popular Italian romanesque type, with its lofty campanile and flat pantiled roof, the latter a feature very unsuitable for our climate. There is also a church, half Gothic, half Classic, the inspiration for which is to be sought in such edifices as the new Charterhouse chapel.



The programme for a Market Hall has produced some most interesting work. A small market hall is possibly not a very modern subject in itself, but as most of the schemes could be readily converted into small-town fire-stations by the fitting of doors into the arcade on the ground floor, the programme need not be criticised on that score. Two of the schemes are fascinating little projects, not, however, altogether free of the tar-brush, i.e., of Stockholm. But it is Stockholm restrained and at its best.

There are on view some clever sketches for the decoration of Castle Street, Liverpool, designed for the occasion of the recent visit of the King to the city. The scheme actually carried out shows the street, which is very wide and leads direct to the Town Hall, flanked by 20 ft. high pylons coloured a warm yellow and linked up with intervening smaller uprights and horizontal bands of colour. The scheme proved in effect, with crowds of people clustering round the base of the shafts, most dignified, and gave a sense of unity to the street not provided by the miscellaneous façades and irregular cornice lines of the buildings.

I have noted in previous exhibitions that for some unexplained reason the Third Year is never productive of the best work. Whether it is that at this period students begin to realise the difficulties of the path they have chosen, or whether the Third Year is a period of adolescence between the first bloom of youth and the mature work of the later years, it would be interesting to know. The most noteworthy drawings are those for a Publishing House, which were awarded the Anthony Minoprio prize. Three schemes for a Bank on a corner site are carefully worked out. Mr. Lightfoot particularly deserves credit for his solution of the problem. Some quite imaginative work is produced in the six-hour sketch subjects. The Piranesi-like prison entrances with unscaleable walls have obviously been designed for the incarceration of cat-burglars.

Amongst the Fourth Year work are exhibited the Tite prize drawings for a Monument to a National Hero. The design takes the form of a circular domed building, the drawings for which are rendered in very befitting sombre hues. The designs for a Public School Chapel are good pieces of work, perhaps a little lacking in that distinction which might cause the buildings to be remembered with affection in after years by the boys. The same criticism might also be applied to the College Assembly Halls. The Grand Staircase of a Foreign Office, by "Tiber," deserves considerable praise. The treatment is well shown in plan and section and is carried out with an appropriate richness of detail.

It is apparent that the programme for a Pump Room and Concert Hall has not been easy of solution. The efforts to join harmoniously a circular pump room and a rectangular concert hall under one roof, as it

Design for Street Decorations, Castle Street, Liverpool.

By MR. LAURENCE WRIGHT, Liverpool University School of Architecture.

were, are not altogether successful. The scheme wherein the dome is the more emphasised is certainly the better. The solution which provides an octagonal pump room set on the short axis of the hall is unfortunately marred by a poor elevational treatment.

The two Thesis Designs carried out in the Fifth Year are most interesting. Mr. H. B. Stout and Mr. K. R. Mackenzie are to be congratulated on the thoroughness of their work. The Thesis by the latter, which accompanies a set of drawings for "Johannesburg Railway Station," is an admirable piece of work. The Fourth and Fifth Year students are certainly to be congratulated on their efforts, but if one may draw a distinction amongst so much excellence, it is that the best of the work is to be found amongst the junior students. Some measured drawings complete the exhibition. The Petit Trianon is most delicately drawn out by Mr. P. G. Freeman, and the Liverpool Town Hall by Mr. A. Wilkinson.

A TUDOR WALL PAINTING, STRATFORD.

What appears to be an important addition to the scanty survivals of English wall painting—particularly outside churches—has just been discovered at the White Swan Hotel, now the property of Trust Houses, Limited, Stratford-on-Avon, says *The Times*. The discovery was made as a consequence of alterations to the premises by Mr. Sydney W. Davis, architect to the company. So far as can be judged from the character of the beams, the original building dates from the 15th century, and the room, measuring about 20 ft. by 15 ft., in which the paintings were found was possibly the central hall. There are indications that it formerly occupied the whole depth of the building, which now has additions front and back.

Inscriptions make it clear that the paintings represent the story of Tobias, from the Apocrypha. What remains is a portion about 13 ft. long and rather more than 6 ft. deep—though in one place the bottom line of the painting is more than 4 ft. from the floor, the plaster below being uncoloured, as if the space had been occupied by a piece of furniture when the work was executed. The general scheme appears to be a ground of boldly-treated foliage and flowers, large in scale, with illustrative insets, each representing an incident of the story, framed between painted columns.

Probably an expert in costume or script could date the painting within a few years, but late 15th or early 16th century is near enough for present purposes. The artist must remain a matter of speculation, though "monkish" is improbable. The style of the foliated work, resembling that of late Italian illuminated manuscripts, would suggest one of the Italian decorators imported under the Tudors, but the more tentative figures appear to be English in style, with very lively line-work in the drawing of the heads.

The wall bearing the painting is of half-timber with a filling of rough plaster mixed with straw. This bears a skin—about a quarter of an inch thick—of finer plaster, upon which the painting is executed. At one point the painting is carried from the plaster across a beam. Except for mechanical injury, the painting is remarkably well preserved, the colours being bright and fresh and the detail unblurred, but the outer skin is inclined to bulge and flake away from the rough plaster ground, and will need careful handling. From the occurrence on a jamb of the fireplace opposite the painting of a foliage detail similar to that described we may assume that the series of subjects was continued on the other wall. Probably the first subject described was the first of the series.

National Gallery Trustee.

The Lords Commissioners of H.M. Treasury have appointed the Right Hon. W. Ormsby-Gore, M.P., to be a Trustee of the National Gallery in place of the late Lord Lansdowne.

BRADFORD SCHOOL COMPETITION.

The site selected for the new buildings of Bradford Grammar School has a frontage of nearly 800 ft. along the east side of the main Keighley Road, about a mile from the centre of the city. The site falls rather steeply away from the road, and in addition there is a fall of some 20 ft. from right to left along the frontage. The problem was to design on this site a fully equipped school for 730 seniors and 270 juniors; the buildings to be grouped near the road and the ample space at rear to be eventually utilised as playing fields. The suggested cost of the buildings was £150,000. The 83 schemes submitted show a remarkable variety of ingenious solutions. The assembly hall for 1,000, as the largest unit in the scheme and the centre of life in the school, is almost invariably placed on the central axis, and the chief problems in front of competitors were the transverse slope of the ground and the difficulty of balancing the senior school of 730 with the junior school of 270.

The winners of the competition (Messrs. Petch and Fermaud), whose design we illustrated last week, and of which some further illustrations are given in this issue, solve the principal difficulties by boldly grouping all units into one tightly-planned symmetrical building. The transverse slope of the ground is less acute than in a widely-spread scheme and is ignored—or rather is levelled through. The slope from front to rear is boldly dealt with and well utilised in obtaining large covered spaces for drill and exercise at the rear of the buildings. The type of plan adopted is, in essence, a hollow rectangle with the central space cut in half by the axial assembly hall. Communications are very simple and entirely adequate, and the general grouping of the various units most efficient. One of the problems resulting from this type of plan is that, to obtain adequate light, rooms must face outwards on all fronts, which means that correct orientation is generally difficult to obtain. In this case, orientation has evidently been considered and is fairly satisfactory. Most of the class-rooms face rather north of east, which is reasonable though not ideal.

The planning in detail deserves almost unqualified praise, the rooms being generally well lighted and of good proportions. One rather difficult problem is solved by placing the swimming baths under the assembly hall cleverly adjacent to both gymnasium and heating chamber, the disadvantage of this solution being the rather inadequate lighting. Another minor criticism is that the dining-hall for 250 is apparently only 12 ft. high—a fact which is masked on section by the introduction of a fictitious partition. The type of plan adopted renders the external expression of the various units practically impossible, and little or no attempt has been made at functional expression. This naturally detracts from the interest of the elevations which are, however, simple and workmanlike with a definite scholastic flavour.

The winning design has been dealt with at some length because it is the only design which will actually materialise and therefore the only design that will have any real effect upon the future of school development. While expressing great admiration for its very obvious qualities—particularly in arrangement and detailed planning—I may perhaps be permitted to regret the gradual passing of the old public-school type of buildings with large open courts and airy breadth of feeling similar to the quadrangles and courts of Oxford and Cambridge.

Passing to the design placed second (No. 32, by Messrs. Stratton Davis, Yates, Dolman and Rowland V. Taylor), this scheme is of a more functional character, the plan giving promise of interesting treatment which is, perhaps, hardly borne out by the elevations. The planning is again symmetrical and has many ingenious points—notably the way in which the semi-circular lecture theatre balances the stage and can on special occasions be thrown into the main body of the assembly hall. Orientation has been somewhat ignored, class rooms facing in all directions. The most attractive elevation is that embodying the dining-hall which would unfortunately be hidden from the playing fields.

Messrs. Sutton and Bryan, authors of the design placed third (No. 46), make practical use of the fact that while the ground slopes transversely near the road frontage, the contours farther back run practically parallel to the road. To make use of this, the wings are set back towards the rear of the central block, thus achieving a widely-spread symmetrical scheme with a minimum of levelling. The classrooms rather curiously all face approximately west, which can hardly be regarded as satisfactory; otherwise the orientation is good, laboratories facing east, art rooms north, and dining-hall south. Balance between Senior and Junior School classrooms is obtained by placing the Junior School classrooms on one floor only of one wing, with Senior School classrooms over—an expedient which was adopted by several other competitors. Gymnasium and swimming bath are rather unhappily placed at opposite ends of the site. The grouping gives promise of interesting elevations, which are somewhat disappointing—particularly the rear elevation, which is disturbed by a number of low projecting buildings.

Of the other designs, No. 64 is a striking scheme of Gothic character. The Senior School with assembly hall, etc., forms the central block, flanked on one side by the Junior School and on the other by swimming bath, etc. Such an arrangement gives the opportunity for massing and functional expression denied to more closely-planned schemes, and the author has made full use of his opportunities. A point worthy of appreciation is that the boys of the Senior School enter by the main entrance under a fine tower on the central axis—a fact of proved psychological value. The gymnasium would have been better placed in the swimming-bath block.

No. 70 is another well-grouped scheme with really interesting and functional elevations. The author has adopted the same expedient for balancing Senior and Junior School classrooms as Messrs. Sutton and Bryan. Levels have been carefully considered. No. 67 is a most ambitious classical scheme, the principal units radiating off a semi-circular corridor behind a straight front. One imagines that levels would prove somewhat difficult. The elevations give promise of dignified treatment. No. 7 has sound elevations of a Georgian character, and utilises the levels to provide large covered spaces in a manner similar to that adopted by the winners.

In a short article it is impossible to mention all the schemes which are worthy of note. The general standard of the designs is well over average and there are very few complete "outsiders." The drawings are exhibited in two large rooms in the Cartwright Memorial Hall at Bradford. Unfortunately sets of drawings are not always kept together and in some cases different drawings of the same set are actually placed back to back making a just appreciation of the scheme extremely difficult. Competitors' reports are not exhibited, which is, I think, a mistake. The report is an essential part of a competition scheme and gives invaluable information regarding cost and materials. Competition reports are by no means easy to write, and their absence is, I feel, a considerable loss to the educative value of the exhibition.

No rendering of any kind was permitted on the drawings. While appreciating the fact that rendered drawings put a premium on the man with "scene-painting" ability, I think that flat washes round plans and elevations make a scheme much more readily grasped. I deprecate the fact that most competitors did not show natural ground levels on sections, and I suggest that, on hilly sites, this should be made an essential feature of the drawings, as should the contouring of site plans.

Graham R. Dawbarn.

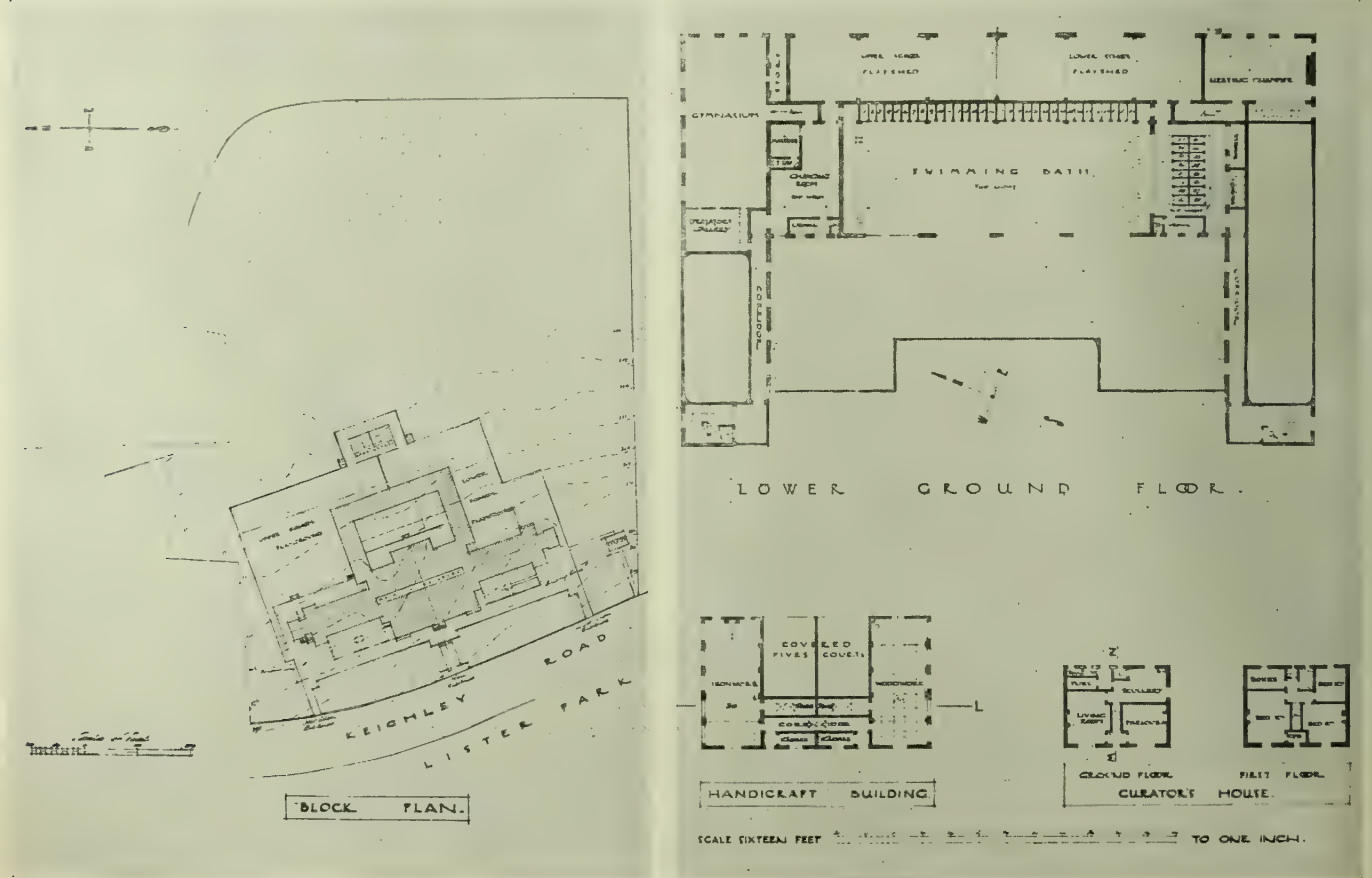
ILLUSTRATIONS

The Menin Gate Memorial.

We give this week two photographic illustrations of the Menin Gate Memorial, Ypres, which was unveiled by Lord Plumer on Sunday last. Sir Reginald Blomfield, R.A., P.P.R.I.B.A., is the architect. A perspective drawing of the memorial was given in our issue for January 11, 1924, together with a special article on the foundations of the structure.

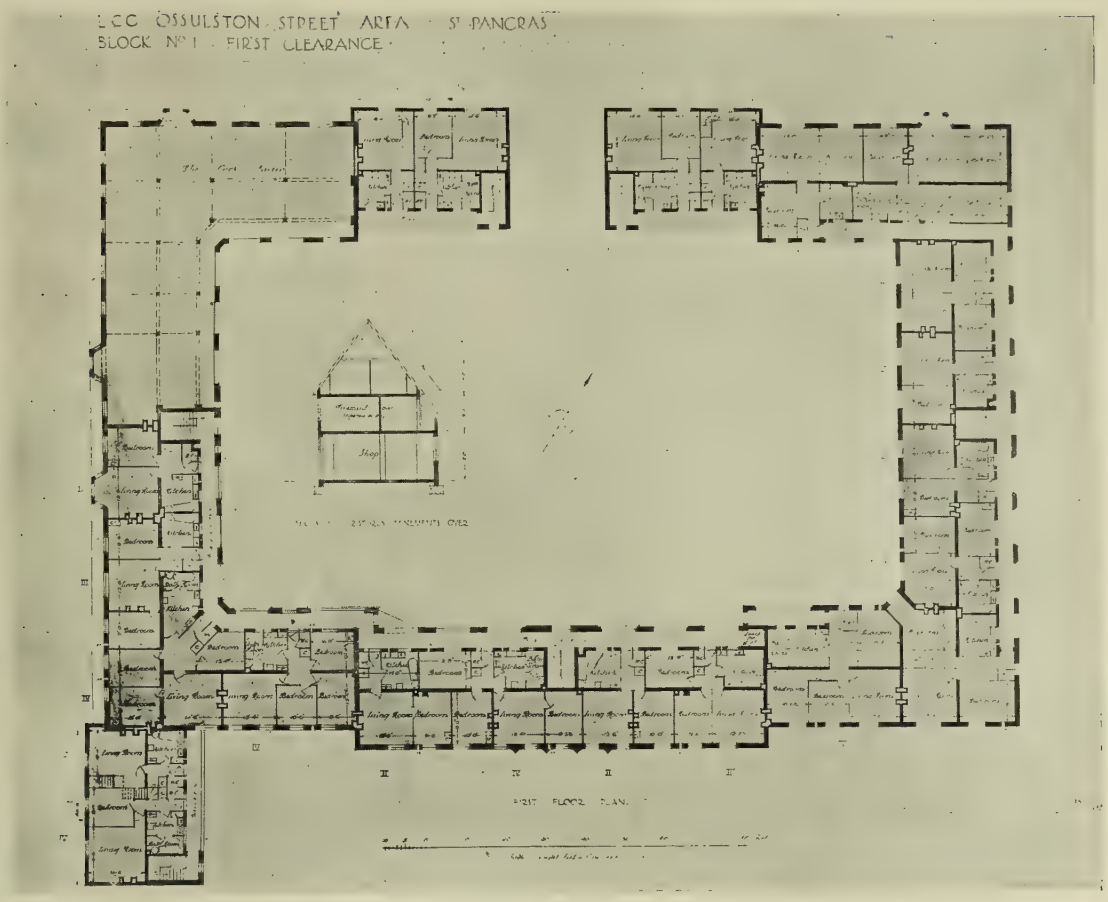
Ossulston-street Housing Scheme.



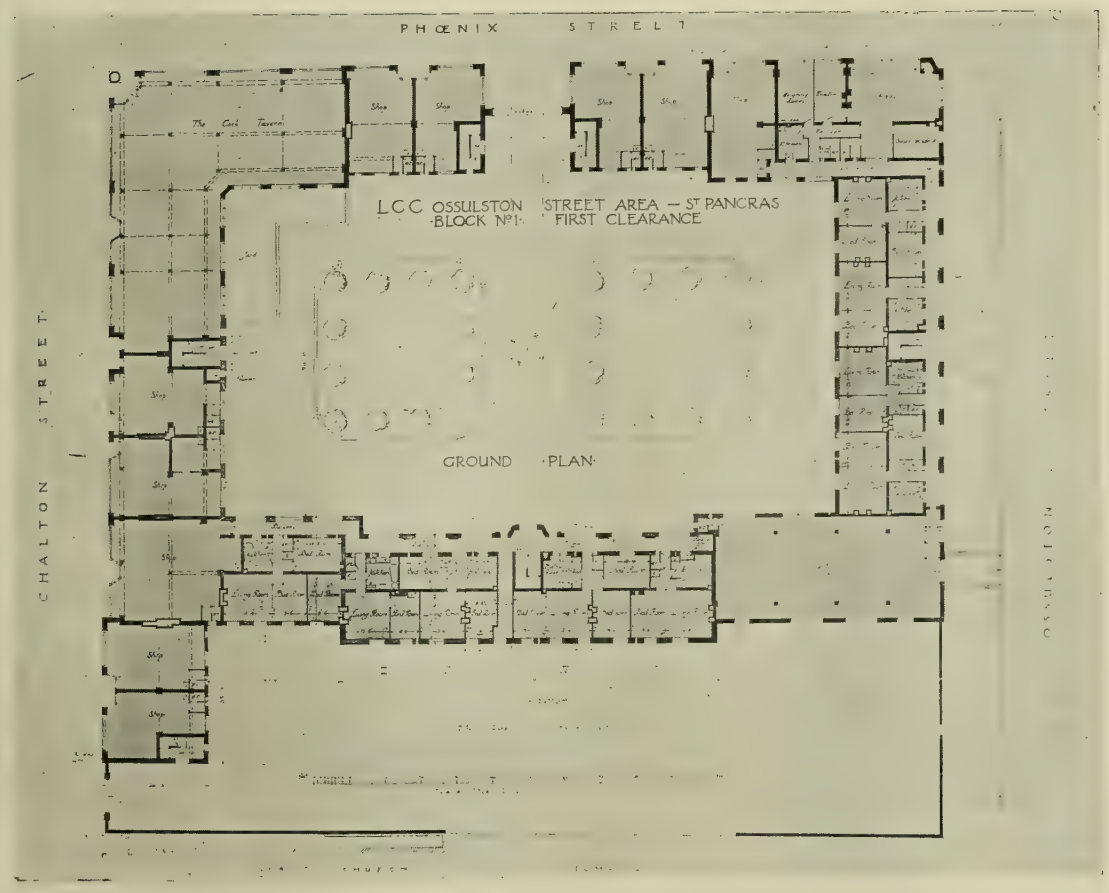
The L.C.C. on February 10th, 1925, decided to make a scheme under Part I of the Housing of the Working Classes Act, 1890 (now Part II of the Housing Act, 1925), for the clearance of the Ossulston-street area, St. Pancras, which is about eight acres in extent, or, with half the area of the surrounding roads, about 8.8 acres. The scheme contemplates the erection of some buildings beyond the height of five stories usually adopted for the Council's working-class dwellings, but not in excess of the limits permissible under the London Building Acts. After utilisation of the site for housing purposes at a reasonable rate of density, approximating to 350 persons to the acre, and providing for the requirements of light and air and the normal amenities of open spaces, there remains the possibility of providing for both shopkeepers and street traders, who would otherwise be displaced from the area. There are certain other portions of the available space which would be unprofitable for the erection of shops, and it is proposed to utilise it for other commercial purposes. The development of the area naturally divides itself into three sections:—the first or northern block (2.7 acres) between Hampden-street and Phœnix-street; the centre block (1.65 acres) between Phœnix-street and Christ Church and the school; and the southern block (4.45 acres) extending to Weir's-passage. The design has been developed primarily from the study of the best way of giving the new accommodation the greatest possible supply of light and air. It is found that this can be accomplished most effectively by varying the heights of portions of the buildings, with the result that the architectural treatment relies for effect upon the disposition of the mass of the buildings rather than upon detail.

The plan for the northern block indicates a proposal to occupy the central part of the ground by a building having an area of about 28,800 square feet for commercial purposes. A block of tenements, flanked on either side by a roof garden, would rise to a height of eight stories—nine including the ground floor. A passenger lift would be provided in this block.

The southern block is the largest in the scheme, and the model indicates the general character of the proposed buildings, which, while designed to afford the fullest possible supply of light and air to the tenements, would enable the site to be developed to the greatest advantage consistent with these conditions. Except for a few one-story lock-up shops the buildings would vary from three to nine stories in height.



The central block of dwellings will be the first put in hand. The buildings will in any case be of normal type of construction, varying in height from three to a maximum of six stories. The preliminary drawing of this block provides for 84 working-class tenements (containing 264 habitable rooms with accommodation for 528 persons) and ten lock-up shops. The dwellings will comprise 16 tenements of two rooms, 41 of three rooms, 26 of four rooms, and one of five rooms, each tenement being self-contained and having, in addition to the rooms mentioned, a scullery and bath and the usual domestic offices. Provision for drying clothes will be made in lofts in the roof and in the yard at the ground level. It is proposed, by arrangement with the St. Pancras Metropolitan Borough Council, to make provision in the building at the corner of Ossulston-street and Phœnix-street for a maternity and child welfare centre, and to provide accommodation for a meeting room for the Salvation Army at the other end of the block facing Ossulston-street. It is proposed to consider the possibility of installing a system of central heating in the northern and southern blocks. It is also intended to provide in all the blocks mechanical means for the removal of house refuse from the shoots at the ground level, and there will be balcony space to enable infants to sleep in the open air on the upper floors of the higher buildings. The accommodation under the scheme as at present proposed would be sufficient, on the usual basis of two persons a room, for about 3,054 persons (being a surplus of about 497 persons over the rehousing obligation for 2,557 persons). The total estimated cost of the whole of the buildings on the area may be taken at approximately £400,000.



Mr. G. Topham Forrest, F.R.I.B.A., architect to the L.C.C., is responsible for the scheme.

LEGAL SECTION

NOTES ON CURRENT CASES

Landlord and Tenant: Alteration of Premises.

An important decision has been given by the Court of Appeal in the case Marsden *v.* Edward Heyes, Ltd. (1927, 2 K.B.1), on the question of what alterations of premises held on a tenancy from year to year constituted waste.

About July, 1895, one William Henry Marsden, since deceased, by an oral agreement, had let a shop and dwelling-house to the defendant company on a yearly tenancy at a rent of £26 a year, payable quarterly. At that time the premises consisted of a shop on the ground floor facing the street, with a kitchen at the back. The shop was separated from the kitchen by a partition wall, and both had fireplaces. On the first floor were two bedrooms, separated by a continuation of the same partition wall, and both with fireplaces. There was a staircase from the ground floor leading to the first floor.

On the death of W. H. Marsden in 1914 the property passed to his widow, the plaintiff in this action.

It was proved that some time in 1914 the defendants had taken down and removed the partition wall on both floors and the fire places and the windows and doors at the back of the premises and the staircase, and had turned the ground floor into one large shop, and the first floor into a loft approached by a ladder in place of the staircase. All the internal fittings and fixtures had been removed. On June 25, 1923, the defendants had sold their undertaking to G. G. Mason & Co., Ltd., and assigned their tenancy in the premises to them, and they had entered into the premises and remained in possession until May, 1925

The plaintiff alleged that it was an implied term of the tenancy that the defendants should, during the tenancy, use the premises in a tenant-like and proper manner, and should keep them in repair and deliver them up, with all fixtures therein, in the same state and condition as they were in at the commencement of the tenancy, reasonable wear and tear only excepted, and they had not so done, and had committed waste in pulling down and removing walls, doors, windows and fixtures, and carrying them away and disposing of them to their own use.

The defendants contended that if they had committed waste (which they denied), it was committed more than six years before the date of the writ, September 25, 1925, and that the claim was barred by the Limitation Act, 1623. They further alleged that it was of an ameliorative character, and improved the value of the premises, regard being had to their nature and user, or probable user, and the purpose for which they were let.

At the trial at the Assizes, it was held that the claim was barred by the Limitation Act, and further, that the only implied obligation upon a tenant from year to year under a parol agreement was to keep the premises wind- and water-tight, and that there was no evidence of a breach of this obligation.

The plaintiff appealed.

The Court of Appeal found that the defendants had completely altered the character of the demised premises, and that this, according to the decided cases, was voluntary waste, and West Ham Central Charity Board *v.* East London Waterworks (1900, 1 Ch. 624) was referred to.

Generally speaking, any lasting damage which alters the character of the premises will be voluntary waste; but, as was pointed out by the Court of Appeal, quoting from the judgment of Lord Loreburn in Hyman *v.* Rose (1912, A.C. 632; *The Builder*, May 31, 1912): "It is a question of fact whether such an act changes the nature of the thing demised, and regard must be had to the user of the demised premises which is permissible under the lease."

This raised the question, what was the obligation of the tenant under this agreement? The Court indicated it was not necessary for the purposes of this case to define the extent of the obligation, but cited the two following cases. In Horsefall *v.* Mather (1 Holt, N.P.7), the case of a tenant at will, it was said the tenant is bound to use the premises in a husband-like manner (which, as Lord Justice Atkin explained, meant the same thing as a tenant-like manner), but the law implies this duty and nothing more. The second case was Ferguson *v.* Anon (2 Esp. 590), in which Lord Kenyon said: "A tenant from year to year is bound to commit no waste, and to make fair and tenantable repairs, such as putting in windows and doors that have been broken by him, so as to prevent waste and decay of the premises."

The Court indicated that the exact obligation could not be satisfactorily defined, as it depended upon the relation between the parties, the character and state of the premises, and other varying circumstances, but that, at any rate, the tenant must deliver up premises of the same character as those demised to him. This finding left the second point to be decided as to the Act of Limitation, as it was contended that an action for waste is one of tort (Defries *v.* Milne, 1913, 1 Ch. 98), and the act, having been committed more than six years before, the claim was barred.

But the Court held that there was a continuing obligation upon the tenant to deliver up the premises at the end of the term by the contract of tenancy, and this, being a continuing breach, was not Statute barred, and judgment was given for an amount agreed upon between the parties, £215 6s. 7d.

We may notice that on the appeal a further contention was raised for the defendant as to the effect of the assignment of the premises, but the Court of Appeal did not take this point into consideration at all, as it had not been raised in the Court below.

A sidelight is thrown by this case on the kind of questions that may be raised if the Landlord and Tenant (No. 2) Bill becomes law. This being a yearly tenancy, the provisions of that Bill would not apply, but it is significant to find it pleaded in this case and argued by Counsel that this operation, which was described by the Judge in the Court of first instance as a gutting of the premises, leaving nothing but the four walls of the building, was an ameliorative measure which greatly increased their value. Such a plea would give under the Bill, in the case of a lease, grounds for an inquiry by the special tribunal as to compensation for tenant's improvements, but the questions raised in this case could never arise, as there is this safeguard, that when a tenant desires to make an improvement he has to give notice to the landlord of his intentions, and the landlord can then, within three months, take objection.

Street Works. Claim for Expenses.

The attention of local authorities may be drawn to the recent decision of the Court of Appeal in the case Friern Barnet Urban District Council *v.* Adams and Others (1927, 2 Ch. 25). The authority were seeking to recover expenses they had incurred for making up a road in their district as against the owners of property abutting upon the road. The works in respect of which the expenses had been incurred had been completed in May, 1923, and the final apportionment had been made in November, 1925, and as no steps had been taken to question the apportionment it became a charge on the premises, and the Council had issued a writ to enforce the charge against defaulting owners. It was not, however, known who some of the owners of land unbuilt upon were, and in the first instance the writ was issued against one owner by name and "the owners of certain lands adjoining Alexandra-road, Friern Barnet, more particularly described in the said endorsement hereon whose names and addresses are not known to the plaintiffs." It was then pointed out that the owners comprised in this description would not necessarily be the owners liable, for, under the Public Health Act as well as under the Private Street Works Act the owners liable are those who are owners when the works are completed (see on this point the eighth article on "Making up New and Private Streets" we published October 1 last), and the Council applied for leave to amend the writ by adding after the word "owners" the words "at the time of the completion of the works referred to in the endorsement hereon." On the hearing of this application the Court refused to allow this amendment, and struck out the words in the writ following the named defendant, on the ground that there was no power to issue a writ against a number of vague, unnamed, unknown defendants.

The Council appealed to the Court of Appeal against this decision, and also asked for leave to be given them to effect substituted service on the persons unknown by affixing copies of the writ on the particular premises respectively.

The Court of Appeal pointed out that no question of substituted service could arise until it had been determined whether this writ as originally issued or as proposed to be amended was a good writ, and the Court unanimously held that the writ in either form was bad under the Judicature Acts, the description of the unknown defendants being too vague.

It was pointed out that although in certain cases defendants may be described by the office which they hold, apart from that they must be named, except in cases specially provided for by Statute. An instance of such a special provision is provided in Section 255 of the Public Health Act, 1875, and also in the Public Health (London) Act, 1891, in the case of proceedings for nuisance, but there is no such provision in Section 257 of the Public Health Act, 1875, under which these proceedings were being taken.

In so far as the case Wealdstone Urban District Council *v.* Evershed (69 J.P. 258) was relied upon to support the contention of the Council it must be taken to be overruled by this decision. It was relied upon by Counsel for the Council, but cited by Lord Justice Lawrence as supporting the decision now given by the Court of Appeal.

Lord Justice Atkin indicated that some other remedy must be found to meet the difficulty the Council were placed in, but did not indicate what that remedy could be. Under Section 13 subsection (1) of the Private Street Works Act, 1892, it is provided that for the recovery of such sums and interest the urban authority shall have all the same powers and remedies under the Conveyancing and Law of Property Act, 1881, and otherwise as if they were mortgagees having powers of sale and lease and of appointing a receiver, but we do not know of a corresponding power under the Public Health Act. The Council in this case seem to have founded their writ on Section 267 of the Public Health Act, 1855, which only applies to the service of notices.

By that section, "Any notice required to be given to the owner or occupier of any premises may be addressed by the description of the 'owner' or 'occupier' of the premises (naming them) in respect of which the notice is given, without further name or description."

LIABILITIES OF ARCHITECTS

The case Wisbech Rural District Council v. Ward (*The Times*, July 20) raises points of importance to architects. The plaintiff Council shortly after the war in connection with a housing scheme had entered into a contract with Messrs. Wright and Wilson for the erection of a number of houses, and the defendant was the architect. The Ministry of Health had rights in connection with the scheme as they had powers by which they could compel the use of material to be sold by the Disposals Board, and they had the further right of revising prices of labour or material according to a rise or fall during the contract.

All the terms of the contract are not at present available in the Report, but the following clause is set out in the judgment of the Court: "No certificate of the architect, except for the final balance, shall be considered conclusive evidence of any works or materials to which it relates nor of the value thereof, nor shall it relieve the contractor from his liability to make good any defects as provided by these conditions nor shall it in any way prejudice the employers in the final settlement of the accounts in any case where the contractor has been overpaid during the progress of the works."

The houses were under construction in the years 1920-1921, and the defendant had given 12 interim certificates, the first on November 29, 1920, and the last on November 24, 1921. In addition to these interim certificates the defendant also gave documents under which the plaintiffs had paid, and as the Court found, had rightly paid the Disposals Board for certain articles supplied by the Board. Under this double set of documents the plaintiffs had to pay both the builders and the Board for some of the same material or articles. The sums thus doubly certified amounted to £221 3s., and the plaintiffs had paid both the builders and the Disposals Board the sums thus certified. It is stated in the judgment as reported that after considerable delay, for which the defendant was responsible, in October, 1923, the parties endeavoured to get a final settlement of the accounts and that in effect the defendant admitted he had made a mistake and did not deny that the sums had been paid twice over. He promised to obtain a refund from the builders, and the plaintiffs gave the defendant an opportunity, at his request, to recover the amount of the money if he could. Unfortunately, however, the builders dissolved partnership and one member of the firm went bankrupt, and then the present action was launched to recover the sum of £221 3s. from the defendant.

The defence was based on four points: (1) That the defendant was acting as a quasi-arbitrator and therefore was not liable in the absence of fraud, of which there was no suggestion in this case; (2) That the action was premature because there was power to rectify under a final certificate and no final certificate had been issued, and should that final certificate be issued it would be found that the builders had not been overpaid because a sum of £221 11s. 8d. was due to them in respect of sums they ought to be allowed for paying increased wages, and so in effect the plaintiffs had suffered no damage: (3) If the matter could not be rectified there had been a final certificate contained in a document known as Summary No. 4, which was the document gone into between the parties to determine what the exact position was, and the defendant had issued his final certificate and could not be sued for negligence; (4) If the defendant was negligent so also were the plaintiffs for not keeping and checking their accounts.

The first of the above points was treated as the main point of substance, but the Court dealt with the other points first. As regards (2) it was held that there was no power to rectify by giving a final certificate (a) by reason of the delay in this matter which had been caused by the defendant; As far back as 1923 he admitted the mistake and was allowed time to see if he could recover the money from the builders; they were in a partnership which came to an end some considerable time ago, and subsequently the partner who continued to carry on the business himself was adjudicated bankrupt; (b) The builders were not entitled as alleged to a sum in respect of increased wages, and in fact the Minister had disallowed it. As regards (3) Summary No. 4 was not a final certificate nor was it intended by the defendant to be one, nor was it issued or accepted as such. As regards (4) the plaintiffs were not negligent and there was no breach by them of any duty they owed to the defendant.

These findings left the first defence alone to be considered. Was the defendant a quasi-arbitrator and therefore not liable? The answer to this question depends upon whether under the clause in question the architect is acting merely as agent for the building owner or whether he has to act as an arbitrator between the building owner and the builder. In Chambers v. Goldthorpe (1901 1 K. B. 624) it was held that the architect in giving a final certificate showing the balance due to the contractor was acting as a *quasi* arbitrator and it appears that if the giving of a certificate involves the decision as between the two parties as to the amount due, that involves duties as a *quasi* arbitrator. Thus it was held in Stevenson v. Watson (4 C. P. D. 148) that the ascertainment of the amount to be paid to the builder is not a matter of mere arithmetic, not a purely ministerial or clerkly duty but one involving the exercise of professional knowledge, skill and judgment.

The Court in the case under consideration held that having regard to the course of business under this contract, and having regard to the clause dealing with the method of payment, especially clause 29 (1) (3) and (5), the architect in giving these interim certificates was not acting as an arbitrator or *quasi* arbitrator, for the interim certificates were not given with a view to regulating the advances and showing how much was to be paid on account, as in the case Tharsis Sulphur Co. v. M'Elroy and Son (1878 3 App. Cas. 1049) and the defendant was deciding no dispute and settling no final balance, and was merely acting as agent for the plaintiffs, and as such was liable for his negligence.

If this case is further reported we may be able to give an extended note upon it. There are not very many English decisions upon the point, but the case of Chambers v. Goldthorpe (*ubi sup*) in the Court of Appeal seems to provide a good working test by which the position of the architect can be determined, viz., does the function he is performing involve the exercise of judgment as between the parties to the building contract? If it does, then he is acting as arbitrator, but if not he is acting as agent.

Mr. Justice Sankey, in giving judgment, having stated the facts, held that there was no power to rectify by giving a final certificate, and that in his view Summary No. 4 was not a final certificate and not intended by the defendant to be one, nor was it issued or accepted as such. He further found as a fact that the plaintiffs were in no way negligent and that there was no breach by them of any dealing which they owed to the defendant. He said the real question was whether the defendant was negligent in giving the *interim* certificate, and the important part of the case was—was the defendant a *quasi* arbitrator and therefore not liable?

There was no suggestion that the defendant had in any way been fraudulent. Having regard to the course of business under the contract, and having regard to the clause dealing with the method of payment, he came to the conclusion that in giving the *interim* certificate the defendant was not acting as an arbitrator or as a *quasi* arbitrator. The defendant was deciding no dispute and settling no final balance, but merely acting as agent for the plaintiffs. He was beyond all question negligent and was liable to pay the amount claimed.

ILLUSTRATIONS

Bradford Grammar School Competition.

The principal drawings of the winning design in this competition were given in our last issue. Further plans are reproduced this week, together with illustrations of the second premiated design, by Messrs. Stratton Davis, Yates, Dolman and Rowland V. Taylor. A criticism of the competition designs appears on page 161.

Bognor Council Offices Competition.

We illustrate this week the three premiated designs in this competition. The full awards are given on page 156.

The League of Nations Competition.

We have received a copy of an album of reproductions of the designs awarded premiums in this competition.* Quoting from the assessors' report we read that "no less than 377 architects took part in the competition, submitting thousands of drawings expressing their ideas in a practical and artistic form worthy of the object in view. Although their ideas did not achieve perfection, the plans contained a wealth of valuable and original suggestions." The jury, of which Sir J. J. Burnet, R.A., was the English representative, after studying the designs, unanimously decided that the results of the competition did not justify the recommendation of any one of the plans for execution, and decided to distribute the 165,000 francs placed at their disposal as follows — nine prizes of 12,000 francs, nine prizes of 3,800 francs, and nine prizes of 2,500 francs. While agreeing with the assessors' decision that no design should be executed which was not of sufficient merit or which was lacking in some essential point, there are reasons for thinking the competition one of the most remarkable on record. Considering the large number of designs submitted, representing some thousands of drawings—so many, in fact, that the authorities had great difficulty in finding housing accommodation—it is amazing that some young genius, to say nothing of eminent practising architects in this country and abroad, should not have produced a design, if not quite perfect, at least worthy of selection with modification. Such arrangements are occasionally made with satisfactory results, as, for instance, in the County Hall competition and Liverpool Cathedral. But judging from the designs published in the album before us, we are not surprised that the assessors were unable to select one which could be adopted for erection, and we may here quote the words of the assessors :—

"The Jury was confronted with an extraordinary wealth of ideas, but was reluctantly compelled to realise that its work was made more difficult by the fact that a considerable proportion of the competitors had not adhered strictly enough to the material conditions required by the programme and rules. With regard to the carrying out of the programme, the fact that the designs show fundamental differences in their conception of the scheme is explained by the evolutionary phase through which contemporary architecture is now passing."

We illustrate a selection of the designs from the album. Though some of the designs in the album are certainly meritorious, others appear to resemble railway stations, gasometers, penitentiaries, and factories. We may add that we believe only four English architects took part in the competition.

THE ROYAL SANITARY INSTITUTE

THE proceedings of the 38th annual Congress at Hastings were concluded for Thursday, July 14, by a paper on the need for

"Improved Houses for Poor Families,"

read before the Conference by Mr. HANKS, a nephew of the author, Mr. Louis Hanks, Assoc.San.I., whose untimely death took place a few weeks ago.

If the housing problem, ran the paper, was to be quickly solved, with due regard to economy, and to the circumstances of the poorest families, it could only be done by the adoption of new methods of procedure and construction. Many families were still existing in overcrowded, unhealthy homes, not that they liked those conditions, but because nothing else was available. Although vast numbers of new houses had been erected under the Housing Act of 1919, or its successors, and many more were building, these did not meet the necessities of the poor people with whom this paper was concerned.

These wants might be briefly summarised as follows :—

(1) accommodation at a rent within their means;
(2) a home within walking distance of employment;
(3) accessibility of cheap markets for food.

The poor could not afford to rent a new house, because its cost had been high, and the consequent economic rent, although warranted, was disproportionate to earnings. It was useless to deplore the high cost of new housing for the reason that the expenditure on actual building was only a part of the expense. Additional to that were heavy items for land purchase, road-making, sewerage, water, gas and electric mains, all of which had to be covered by the economic rent. We were thus forced to the conclusion that those monotonous little houses, in rows of mean streets, which surrounded London and other industrial centres, actually served an essential, social purpose as well as meeting the necessities of their inhabitants. These were cases not for house destruction but for reconditioning without de-housing tenants. The cost of such remedial works would be small in comparison with that of building new houses. Moreover, the heavy expenses of land purchase, roads, sewers, and the like, were all avoided because the houses, roads, and public services already existed.

As we surveyed such neighbourhoods from an elevated railway line, the idea dawned upon us that fuller use might be made of these existing advantages if the houses were a story higher. Most of them contained three rooms on the ground floor and three on the first floor and accommodated two families. By the addition of another story to these houses we could at once add one-third to the existing housing accommodation of the locality.

Usually such houses possessed but one w.c., outbuilt at the rear, and one sink in the ground-floor kitchen or wash-house. In improving the premises an additional w.c. adjoining would be constructed for the first-floor people, with an outer door from the rear passage to the yard. A gas-cooker and a sink with water would be placed in the first-floor living-room. The new flat on the second floor would have its own w.c., approached from the ventilated landing. There would also be a sink with water and a gas-cooker.

The general re-conditioning would, of course, include necessary drainage, sanitary improvements, structural repairs, and redecoration. Three poor families would be provided with clean and decent accommodation in each house where two families now existed in squalid discomfort or indecent overcrowding. The houses and streets under discussion, if not bad enough to be classed as slums, were in danger of degenerating to that condition. It was our duty to go to the rescue of their unfortunate inhabitants before it was too late.

In the discussion that followed this paper, Mr. J. B. L. MEEK, of Manchester, said it was surprising to find any member of the Royal Sanitary Institute suggesting in the twentieth century that slum areas should be rehabilitated. What was really required was to get down to the hard architectural fact that a suitable house design had to be found to accommodate the poorer workers.

Councillor F. B. BENDING, Deputy-Mayor of Bexhill, said that he felt housing authorities generally were grabbing at a whole loaf and failing in the attempt when they could do so much better by making sure of a half. He felt that the housing problem should be solved by degrees, and that the aim should be to remove people to places even a little better than those they had been in before. That was infinitely better than for authorities to set off with a great rush to put everyone into a new house—only to find the workers could not afford to live in them. Regarding the fitness of the labouring class to inhabit the new houses, he detailed an interesting scheme he had seen in Holland. The authorities there had built an octagonal block of flats, surrounded by a wall. Attached to the block was a policeman, a doctor, and a nurse, and families from particularly squalid homes were given a probationary trial of six months in these flats under the supervision of the nurse and doctor. In the great majority of cases these tenants turned into very decent householders and were then installed in the Council houses.

Yet another suggestion was put forward by Alderman H. M. BLACK, of Brighton, who said that £4,000 had been set aside by his Corporation to buy scattered houses throughout the town, purchased on the express condition that the occupiers would move into the new council houses. These scattered houses were then rehabilitated, and into them moved workers from the slums. They in Brighton believed in a gradual uplift.

Mrs. E. M. SANDS, of Smethwick, spoke of the danger that the overcrowding brought to young married couples, and urged that houses be built at a rent within the means of the people for whom council houses were designed.

The Conference was concluded on the Friday morning, when the first paper read was by Mr. S. R. RAFFETY, M.Inst.C.E., M.I.Mech.E., F.San.I., on

"The Water Supply of Jerusalem."

The existing waterworks of Jerusalem, said the lecturer, were historically of interest, but not very instructive from an engineering point of view. Physical and geological features, together with the incidence of the rainfall, made it difficult adequately to supply the city from sources near at hand. He described briefly the water supply to the city in early times, together with the works of considerable magnitude which were probably constructed in Roman times, and said that records from the Bible and elsewhere showed that tunnelling was an art well understood by the ancient Jews.

The main source of supply to the city had been for years from the collection of the rainfall in tanks or "cisterns," constructed by the householders, and to this day these still supplied the bulk of the population. He also referred to the work of the Army during the occupation, and the recent construction of temporary works, which for the first time brought pure water into Jerusalem.

A paper on

"The Need for Research in connection with the Purification of Sewage"

was then read by Mr. ARTHUR J. MARTIN, M.Inst.C.E., F.G.S., F.San.I.

The need for scientific research, said the lecturer, in connection with the purification of sewage had long been recognised. On February 15, 1927, Lord Balfour said that the Government were desirous of promoting research by the whole scientific strength of the country, and were prepared to supply the necessary financial resources. It was necessary that those concerned with the purification of sewage should consider how the work could best be carried on. It was hardly possible to provide all the requisite conditions in a single laboratory, and it would be a grave mistake to ignore the agencies already in the field. The managers of our more important sewage works were devoting much of their leisure to research, and the Rivers Board were carrying on important investigations. The bio-chemical departments of the universities, too, were well equipped for this work. What we needed was not so much new agencies for research as the co-ordination and adequate support of existing agencies. The Grocers' Company, during a period of three years, financed Mr. Lockett's work in the development of the activated sludge process. The money promised by Lord Balfour could not be better spent than by maintaining research scholars engaged in the investigation of selected problems at universities or at sewage works.

Much of the difficulty met with in the purification of sewage was due to trade wastes. The industries producing these wastes should contribute towards the cost of solving the problems to which they gave rise. There was much to be done in the testing of the materials and appliances used in the purification of sewage. This work should be paid for by the manufacturers concerned. Adequate provision should be made for the periodical publication of the results arrived at, both at home and abroad. Those concerned in the purification of sewage should come together and place on record a considered expression of their views.

Mr. Martin then moved the following resolution :—"That in view of the need for research in connection with the purification of sewage the Council be requested to convene a committee comprising biologists, chemists, engineers, medical officers, works managers, and others concerned with sewage disposal to ascertain in what directions research is needed and what agencies are available for conducting it, and to consider means for encouraging and co-ordinating their work and publishing the results from time to time."

This resolution, after considerable discussion, was carried unanimously.

Mr. ALFRED GRUNSPAN, B.Sc., A.M.Inst.C.E., Consulting Engineer, London, then read a paper on :—

The Comparative Cost of Structures.

When considering the method of construction to be adopted for a given structure, said the lecturer, the engineer was governed by such considerations as cost, speed of construction, and appearance. With the present high cost of building, the call for economy on the part of the engineer had never been so pertinent, and hence he had chosen for the subject of this paper a few examples illustrating how the cost might be varied by altering the method of construction for one and the same structure. The figures he proposed to give were not hypothetical; they represented the actual cost, as the unit prices were taken from contractors' schedules in contracts recently carried out under him. In a factory building recently designed, he considered eight alternative schemes. It was a two-story building, 450 ft. long by 50 ft. wide, the first floor being designed to carry a live load of 2½ cwt. per sq. ft.

The schemes were as follows :—

1. Steel frames consisting of steel stanchions and main joists resting directly on the stanchions, with a concrete slab divided into 15 ft. by 16 ft. and 15 ft. by 18 ft. panels, and reinforced in two directions.

2. Steel frame consisting of stanchions, main girders and secondary girders, the stanchions being arranged at 15 ft. by 25 ft. cross-centres. The secondary girders were carried by the main girders at third points, providing for a concrete slab 8 ft. 4 in. span reinforced in one direction.

3. Steel frame consisting of stanchions

spaced at 15 ft. by 15 ft. 3 in. and 19 ft. 6 in. cross-centres, and main girders only. The concrete floor is reinforced with steel filler joists spanning 15 ft.

4. Steel frame as arranged in scheme 2, but with two rows of intermediate stanchions.

5. Steel frame consisting of main girders, secondary girders, filler joists spanning 10 ft., and stanchions at 15 ft. centres by 16 ft. 9 in. and 16 ft. 6 in. cross-centres.

6. As scheme 3, but stanchions at 12 ft. 6 in. centres, instead of 15 ft. (filler joists spanning 12 ft. 6 in.).

7. Reinforced concrete flat slab construction, or girderless floor. Octagonal columns with capitals arranged so as to give two external bays 17 ft. 5 in by 16 ft. 1½ in. and one central by 17 ft. 5 in. by 17 ft. 9 in.

8. Reinforced concrete slab with reinforced concrete beams and columns.

The results are given in Table 1, from which the cost of frame and suspended floor, designed for a superimposed load of 2½ cwts., per sq. ft., was given per bay 50 ft. by 15 ft. The cheapest form of construction appeared to be given by the girderless floor, or, as it was commonly called, flat slab or mushroom construction.

This method of construction was well known to possess many advantages, compared with other methods, and lest it should be inferred from this paper that it was always the more economical, the lecturer thought he ought to mention that the flat slab method of construction was economical within limits and that there were, of course, occasions when other longer tried methods were both more suitable and economical. To illustrate this he quoted the case of a reinforced concrete reservoir of 5,000,000 gallons capacity, 227 ft. in dia., the roof of which had to sustain a superimposed load of 2½ cwts. per sq. ft., in addition to earth material, weighing 137 lb. per sq. ft.; in other words, the load for which the roof had to be designed was 417 lb. per sq. ft., exclusive of its own weight.

Three schemes were considered, as under.

1. Reinforced concrete slab with R.C. beams and cols.

2. Reinforced concrete slab with steel girders and stans.

3. Flat slab construction.

Three spans were considered for each scheme, and so nine estimates were obtained for one and the same structure. The results are given in Table II, and this shows scheme 1 to be more economical than scheme 3.

Here was a case, then, where for heavy loads, and with no restrictions as regards column spacing, the reinforced concrete slab divided into square panels by beams 12 ft. span, with columns at 12 ft. by 12 ft. centres, was more economical than a flat slab with columns at 16 ft. centres.

Had the column spacing, however, been restricted in scheme 1 to 15 ft. or 16 ft., then scheme 3 would have proved the cheaper of the two. It might perhaps be thought that had the columns in the flat slab scheme been spaced at 12 ft. centres it would have compared favourably with a similar spacing of columns in scheme 1. This, however, was not so, because for economy the spacing of columns in flat slab construction should not be less than 15 ft. In the factory building a saving of about £52 per bay was effected by adopting the flat slab construction, as against the cheapest form of steel frame, cased in concrete. This on 30 bays would represent a saving of about £1,500. Again, by adopting the alternative method of reinforced concrete construction, the saving compared with the cheapest steel frame cased in concrete would for 30 bays amount to about £1,230. The question arises, Would either method of reinforced concrete construction prove as speedy as a steel frame cased?

Theoretically, he should say yes, but the fact was that actually the contractor took a longer period over a reinforced concrete job than over a steel frame. In trying to find a reason for it, he had come, said the lecturer, to the conclusion that the delay was due to the inadequate use of mechanical plant and to the lack of standardisation in design. The engineer could largely help to mitigate the trouble by aiming at standardisation, to which reinforced concrete lent itself, without the sacrifice of economy. For example, instead of varying the section of beam too freely, the size of the beam can be kept constant, and the reinforcement varied.

This saved a lot of labour otherwise required in the making of centres, apart from the fact that a carpenter would take a longer period to make a given number of boxes of varying sizes than he would for the same number to one size. This principle he had always adhered to, and recently in the construction of a large hall in reinforced concrete, he had used throughout an 18 in. by 7 in. beam; the saving in time which this effected proved unmistakable. The lecturer dealt with other interesting structures and showed lantern slides illustrating the lecture.

TABLE II.

Scheme.	Description.	Column spacing.	Cost.
I.	R.C. slab	12 ft.	£7,900
	R.C. column	14 ft.	£8,700
	R.C. beams with haunches	16 ft.	£9,340
II.	R.C. slab	12 ft.	£9,750
	Steel beams	14 ft.	£10,450
	Steel columns	16 ft.	£14,080
III.	Flat slab construction with drop-panels, octagonal—Column with octagonal capitals —	16 ft.	£8,230
		18 ft.	£8,760
		20 ft.	£9,240

Extensions to Colchester Institution.

The Joint Committee of the County Councils of Cambridgeshire, Essex, East Suffolk, and West Suffolk reported that plans for the extension of the Royal Eastern Counties Institution, Colchester, had been prepared by Mr. John Stuart, Essex County Architect, the estimate of the cost of the erection of the first section of the buildings being placed at £250,000, while the cost of equipment would be £25,000. Provision would be made for 444 additional beds. The Committee recommended that the plans be approved and the work proceeded with.

ARCHITECTS' & BUILDER INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—ED.

Measuring Artificial Stone.

[REPLY TO "SURVEYOR," JULY 8.]

SIR,—Your correspondent signing himself "Surveyor" would appear to be ignorant of the existence of "The Standard Method of Measurement of Building Works," which contains on page 18 full particulars for measuring this and similar material. If this work, agreed by the Surveyors' Institution and the Federation of Building Trades Employers, were studied and used by all surveyors, the labours and doubts of those of us who have to interpret and price their quantities would be very considerably reduced. ESTIMATOR.

Rating Valuation.

[REPLY TO "NOVICE," JULY 15.]

SIR,—On a consideration of the particulars and figures given, which appear to be in connection with a leasehold tenure probably occupied by the leaseholder himself, the annual outgoings would approximately be as follows :—

	£	s.	d.
Ground Rent as given	8	15	0
Rates at 18s. in the £, on the given rateable value of £12...	10	16	0
For Water Rate, say	1	2	0
For Repairs, Insurance, and Sinking Fund for Renewal, say	4	5	0
Total annual outgoings ...	£24	18	0

To reply shortly to the second part of the question is impossible; but it may be said that the rating of property generally is based on the rent at which the hereditament may reasonably be expected to let from year to year; and what a tenant might reasonably be expected to pay for it from year to year. It is in all cases the rent that has to be found—not the tenant. Again, it is the value of the hereditament to the owner that is required—whether he is the owner-occupier of it, or whether it is occupied by a tenant. The rent is what a tenant (not the tenant) is expected to pay for the hereditament; and in this matter all possible tenants must be looked to. The owner-occupier must be considered as a tenant, also persons other than the actual occupier, so as to obtain what is known as the "hypothetical tenant" for the purposes of rating.

With regard to the rating of any given house, there are three classes of tenancy :—(1) Leasehold for a term of years, the tenant paying rent, rates and taxes, repairs and insurance; (2) Yearly, the tenant paying rent, and rates and taxes; (3) Less than yearly, the tenant paying rent only. It is (2), i.e., the yearly tenancy, which is assumed by the Acts of Parliament which concern rating. If the rent paid is fair and bona-fide, it may be taken as the gross value and the allowances deducted therefrom, as given, for the

Metropolis in the Schedule to the Valuation (Metropolis) Amendment Act, 1925, and for elsewhere, in the Second Schedule to the Rating and Valuation Act, 1925.

To value property for rating purposes requires much consideration and expert knowledge; but briefly, all or any one of the following methods may be adopted to obtain the annual value, and as circumstances demand:

(1) On basis of rent paid, and comparison with other similar properties;

(2) On basis of contractor's theory, *i.e.*, taking a percentage on the whole of the outlay in connection with the land and buildings, including architect's and lawyer's fees, etc.;

(3) On basis of accommodation and comparison with accommodation of other similar properties;

(4) On basis of rent which a hypothetical tenant would pay (see above).

Other considerations useful are:—

(*a*) Floor space compared with other like buildings;

(*b*) Value of frontage at per foot run, or area of land at per foot or yard super, as may be;

(*c*) Dimensions of buildings generally compared with other like buildings;

(*d*) Any special advantages or disadvantages in connection with the particular property.

Space will not permit of examples of valuations being given, but see Crew, Creswell & Hannings on Rates and Rating.

ADVICE.

Painting Stonework.

SIR,—The stone dressing to windows and door of a house are crumbling at the edges and mouldings. I propose to paint the work cream colour. Could you tell me what to use for the first coat?

R. W.

Defective Rough Casting.

[REPLY TO "R. N.," JULY 15.]

SIR,—I am afraid there is nothing for it but to get the defective last coat right off and renew in proper fashion. I should say it was more likely that the defect is due to lime that has not been slaked for long enough than to too much lime, but your correspondent will find a better and equally handsome effect if he uses white cement instead of lime when the job is done again.

ARCHER.

Scottish Contract.

[REPLY TO SASSENACH, JULY 22.]

SIR,—Your correspondent will find that with a good Scots clerk of works his labours will be little, if at all, heavier than in an English contract. The employment of one is the general rule across the border, and a good local man will understand the co-ordination of the various contracts as part of his duties. I do not think any extra fees could be fairly claimed because of the local conditions, on an ordinary straightforward job.

MAC.

SIR,—There is nothing to prevent "Sassenach" from claiming fees additional to those usually paid for the work he describes; although such work is usually paid for at the same percentage as when only one general contract is arranged. In any case, he should endeavour to enter into a contract with the employer containing specific terms as to payment; otherwise, if no such provision is made, he cannot claim more than a reasonable remuneration.

It is useless to rely on a scale of fees prepared by any institution. They are not recognised by the Courts as legally binding on the employer unless they form part of the agreement; although it is true they may be used as evidence of the reasonable nature of the charges made. Also charges made by "custom" can be pleaded, although, as previously stated, "custom" would, it is thought, not assist in the question raised. (See Chapter XIV., Creswell on Building Contracts.)

LAW.

"Sassenach" will never get additional fees in Scotland, because of the local practice of separate trade contracts. It is one of the ordinary conditions of work there for which no one thinks of making an extra charge. Undoubtedly it brings extra work on the architect but, inasmuch as selection can be carried down through all the trades instead of having to take doubtful sub-contractors, it has its advantages.

BOREAS.

Thatching.

SIR,—What is a fair price to allow for reed thatching at the present time? The total quantity is about 20 squares, and there are about half a dozen dormers to cover.

IGNORANT.

Asbestos Scolloped Tiles.

SIR,—Can you tell me where I can obtain asbestos scolloped tiles of mottled colour? I have tried a number of well-known firms but without success.

ARCHITECT.

THE WEEK IN PARLIAMENT

WESTMINSTER, *Wednesday.*

Scottish Housing.

During a debate on the Scottish Estimates, Major Elliot said that this year, in Scotland, they had succeeded in building sufficient houses by the beginning of July to meet the normal requirements of the year, so that every house built from now to the end of the year would be a clear gain. He hoped they would be able to build at least 6,000 more houses during the present year. No houses for which the Board of Health were directly responsible were less than three-roomed houses. The two-roomed houses which local authorities often erected were a great improvement on the old type of house. Owing to delays, they would probably have to reduce the programme of steel houses from 1,000 to 500 for the present year.

The Burghers of Calais.

Sir Robert Thomas asked the Under-Secretary of State for the Home Department, as representing the First Commissioner of Works, whether he was aware of frequent complaints that the statuary group, Burghers of Calais, by Auguste Rodin, in the Victoria Tower Gardens, was placed on so high a pedestal that it could not be seen and studied to advantage; and whether, in view of the beauty and educational value of this work of art, he would have the pedestal lowered.

Captain Hacking said that the height and design of the base of the statuary group in question were fixed, after prolonged consideration, in full accordance with the views and wishes of Monsieur Rodin, and actually approved by him. The First Commissioner, therefore, did not see his way to adopt the suggestion made, which, apart from artistic considerations, would involve substantial expenditure from public funds.

Prices of Houses.

Mr. Chamberlain informed Mr. Bromley that the following statement showed the average prices of houses included in contracts let by, or in direct-labour schemes of, local authorities during the under-mentioned months:—

Month.	Non-parlour houses. £	Parlour houses. £
January, 1927 ...	427	492
February, 1927 ...	422	489
March, 1927 ...	425	494
April, 1927 ...	421	479
May, 1927 ...	397	474
June, 1927 ...	425	481

NOTE.—The above prices excluded the cost of land and development.

Building Prices.

Sir Robert Thomas asked the Minister of Health whether he was aware that the progress of building in this country was being retarded by the operations of rings and price-fixing associations, particularly in regard to timber; and whether he would set up a committee of inquiry into the matter.

Sir Kingsley Wood said that the Inter-departmental Committee on the prices of building materials kept in constant touch with and investigated prices of building materials. In their last report, which dealt with the prices ruling on May 1 last, they stated that prices in several directions tended to become easier. As regarded timber, the schedule appended to that report indicated that between January, 1924, and May, 1927, timber prices generally had substantially fallen. He was advised that there was no ring or price-fixing association in the timber trade.

Slum Clearances.

Mr. Harris asked the Minister of Health what money had been allocated by the Treasury to assist slum-clearance schemes; if there was any fixed figure provided for this purpose; and whether the £200,000 allocated as an annual grant to help slum clearance had in any one year been spent.

Mr. Chamberlain said that no fixed allocation was made for Exchequer contributions towards the expenses of slum-clearance schemes, the actual expenditure each year being dependent on the progress of the schemes sanctioned. The requirement for the year 1927-28, for which provision was included under the general housing grants sub-head of the Vote for the Ministry, was estimated at £65,000.

Shortage of Bricklayers.

Sir Frederick Hall asked the Minister whether he was aware that the provision of houses for the working classes in the Watford area was being delayed because of the shortage of bricklayers; whether this cause was responsible for the slow progress being made elsewhere with the erection of working-class houses; and if he would state what measures he proposed to take to cope with the difficulty.

Mr. Chamberlain said he had inquired whether a shortage of bricklayers in the Watford area was retarding the progress of house-building, and he was informed by the Town Council and the Rural District Council that they had experienced no difficulties in this respect. The fact that over 217,000 houses were erected in England and Wales during the year ended in March last seemed to indicate an improvement in the supply of skilled workers for house-building, and it was still made a condition of approval of housing schemes of local authorities that the contractors should employ a number of apprentices proportional to the number of building trade craftsmen employed on the schemes.

Empire Timber.

In reply to Sir Robert Thomas, Mr. Ormsby Gore said the percentage of timber imported into this country from Empire sources was (on the basis of value) 28.6 per cent. in the case of hardwoods, and 5.7 per cent. in the case of softwoods, or 10.4 per cent. in all. Government afforestation schemes provided for the planting of approximately 20,000 acres and 10,000 acres per annum in New Zealand and the Union of South Africa, respectively, while, in addition, considerable areas in those Dominions were being planted by private enterprise. The object of these afforestation schemes was to make these Dominions independent of timber imports, and it was clear that until this was accomplished they would not increase the proportion of Empire timber imported into this country.

Lead Paint.

Mr. Harvey was refused leave to bring in a Bill to remove the prohibition contained in the Lead Paint (Protection against Poisoning) Act, 1926, of the employment of women in painting buildings with lead paint.

THE BUILDING TRADE

THE LAW OF FIXTURES.—XIV

By W. T. CRESWELL, Barrister-at-Law; L.R.I.B.A.; Associate (late Fellow) of the Surveyors' Institution; &c.

PRACTICE AND PROCEDURE:

Valuation of Fixtures in Private Sales or by Auction.

When land and buildings are sold, either privately or by auction, it is usual to include in the conditions of sale that fixtures shall be taken at a price definitely stated or at a valuation which shall be made in a specified manner. Or it may be stated that they shall be taken at a "fair" valuation or price. But, as already pointed out, if no mention is made of the fixtures, then a sale of land and buildings of any kind will include all fixtures thereon at the time of the sale.

Valuation of Fixtures Under a Mortgage and in Other Cases.

Under a mortgage of land and buildings, a schedule of the fixtures to be included, or excluded, variously from the security is often attached to the mortgage deed. If fixtures whose aggregate value amounts to £30 or more are mortgaged separately from the land and buildings, the mortgage comes within the Bills of Sale Acts; and when the articles are scheduled, they are valued as severed chattels and not as fixtures, in all respects similarly as in the sale of fixtures sold apart from the land or taken under a writ of execution.

In all other cases, including the valuation of fixtures for rating purposes, estate duty, and purposes of insurance, and where taken under "compulsory purchase," fixtures are valued as fixtures and *in situ*.

Valuation Where Premises Are Leased.

Again, where premises are leased, and the lessor and lessee agree that the latter shall at the end of the tenancy take over the fixtures at a valuation, only those fixtures which the lessee would be entitled to remove at the end of the term are concerned in this valuation.

If there is a stipulation that the lessor will take back fixtures and make an allowance for them at the end of the term, that would only apply to the fixtures that were there at the commencement, or put up in place of those which were worn at the demise, and had been purchased by the tenant, or substitutes for such of these as become worn out and are incapable of further repair; and would not apply to any additional tenant's fixtures put up by the tenant during his term.

Between Outgoing and Incoming Tenants.

When there is an agreement between an outgoing tenant and an incoming tenant for the latter to take over the tenant's fixtures on the premises, only those can be included which are removable as between a landlord and outgoing tenant; and an incoming tenant may recover from the outgoing tenant any sum he may have paid to him for any article wrongfully included. In this instance the landlord should be made a party to the agreement between the outgoing and incoming tenants, so that no dispute may arise as to the right of removal, or the incoming tenant's right to their use or ownership.

Making the Schedule or Inventory.

It will have been seen from preceding articles that a detailed schedule of fixtures, usually termed an inventory, is required on many occasions, and generally, though not always, a valuation also of each of the articles enumerated, together with their aggregate value.

An architect or surveyor, in making such inventory or schedule of fixtures, should first consider any existing agreement between the parties, also any customs prevailing in the district, especially as to outgoing and ingoing tenants. And he must rely, in the absence of any reference to the fixtures in detail, upon his own knowledge and judgment, to determine the rights of ownership in respect to any individual article. He should also arrange the schedule in some definite order, taking external fixtures on and around each building and scheduling each separately first. Then he should proceed to the internal fixtures, making a list of them on the top floor, taking each room separately, and working from left to right on each floor, regardless of the nature of the room or compartment; and so on downwards to the basement. As each item is noted, it should be priced separately.

The Valuation.

When fixtures are to be taken at a valuation, or a fair valuation, the usual way is for *two* valuers to be appointed, one being selected by each party, and, in case they disagree, then the valuation is made by an umpire, or "third valuer," appointed by the two valuers *before* proceeding to act.

It is important to remember that a person appointed to value is not an arbitrator, because he is merely using his skill and knowledge in valuing, to arrive at a correct price, and is not acting *judicially* between two parties in a dispute, neither is he bound to give a *judicial* decision. The fact that each party appoints a valuer makes this position obvious, because neither of them can give the award. Further, if any person has the function of finally adjusting accounts, neither is he thereby invested with the functions of an arbitrator: he is an appraiser only.

(See Hammond v. Waterton, 1890, 62 L.T. 808.)

Stamping the Inventory or Schedule.

Any agreement for the sale or purchase of fixtures must be stamped under the provisions of the Stamp Act, 1891. This applies to any schedule of fixtures, whether a document by itself, or annexed to the deed of a lease or conveyance of land.

The Stamp Act, 1891, enacts that an appraisement or valuation of any property, or of any interest therein, or of the mineral value thereof, or of any dilapidations, or of any repairs wanted, or of the materials and labour used, or to be used, in any building, or of any artificers' work whatsoever, is liable to stamp duty.

In Atkinson v. Fell (1816), 5 M. and S. 240, it was held that a valuation not obligatory upon the parties interested, nor in itself intrinsically evidence between them, was not a valuation requiring the maker thereof to hold a licence. This ruling governs the stamp duty; for, under Schedule I. of the Act, an appraisement or valuation made from, and for the information of, one party only, and not being in any manner obligatory, as *between* the parties, either by agreement or operation of law, is exempt from stamp duty.

An appraisement chargeable with stamp duty must, within fourteen days after making it be written out in words and figures and duly stamped; otherwise the appraiser making it incurs a penalty of £50. Also, any person who receives at any time from an appraiser, or pays for the making of an appraisement valuation is, unless the same be written out and duly stamped, liable to a fine of £20.

Appraiser's Fees and Licence.

If an architect or surveyor wishes to act as a valuer and to appraise fixtures and to receive or recover fees for such work, apart from moneys expended by him on behalf of his employer, he also must hold a licence. Should he value or appraise without a licence, he is subject to a penalty of £50 under Section 21 of the Inland Revenue Act, 1890.

In Palk v. Force (1843), 12 Q.B. 666, it was held that for appraisement or valuation, even in one instance, the licence fees and duties must be paid, and that a person cannot recover at law for work done as an appraiser unless he be licensed before acting as such.

In valuing, an architest or surveyor holds himself out as one possessing the requisite skill and ability, and represents that he is reasonably competent to perform the task he undertakes; if, therefore, he fails, from want of skill and care, he is liable for negligence. (See Jenkins v. Betham, 1855, 15, C.B. 168.) The decisions of an appraiser or valuer may at all times be reviewed by the Court.

THE AUCTIONS (BIDDING AGREEMENTS) BILL.

The Auctions (Bidding Agreements) Bill passed the third reading in the House of Commons on the 24th ult. Clause 1 enacts that if any dealer agrees to give, or gives, or offers any gift or consideration to any other person as an inducement or reward for abstaining, or for having abstained from, bidding at a sale by auction, either generally or for any particular lot, or if any person agrees to accept, or accepts, or attempts to obtain from any dealer any such gift or consideration as aforesaid, he shall be guilty of an offence under the Act and liable on summary conviction to a fine not exceeding £100, or to imprisonment for any period not exceeding six months, or to both fine and imprisonment.

There is a proviso to this clause that where it is proved that a dealer has previously to the day of the auction entered into an agreement in writing with one or more persons to purchase goods at an auction bona-fide on a joint account such an agreement shall not be treated as an agreement made in contravention of the clause. The words "the day of" were omitted, but the following words were added: "and has before the goods were purchased at the auction deposited a copy of the agreement with the auctioneer," and with these amendments the Bill appears to have passed in the form in which it left the Standing Committee.

This is a private member's Bill, and is different from the Bill to prohibit mock auctions which we noticed in our issue for May 6, and it would be of advantage if the whole law relating to auctions could be dealt with in some measure promoted by the Government. This may be a small instalment, but it seems doubtful whether it will adequately touch "rings" at auctions. Will a tacit arrangement between dealers only to bid for certain lots fall within its provisions? A gift or reward rarely passes between the parties, but there is often a tacit arrangement as to the bidding, by which no consideration passes between the parties, although they gain an advantage from limiting the bidding, thus getting rid of competition. Will such arrangements fall within the words "Agrees to give, or gives, or offers any gift or consideration"? Such a "consideration" would in any event be very difficult to prove, as the advantage gained arises from a simple abstention from entering into competition as regards certain lots, or by arranging the catalogue amongst dealers so as to limit competition, and it is not a necessary part of this arrangement that the lots purchased shall subsequently be divided between those who bid.

THE LANDLORD AND TENANT (No. 2) BILL

We had hoped to have the opportunity of considering the amendments introduced in Committee into the Landlord and Tenant (No. 2) Bill in detail when the Bill was reported, as the reports of the proceedings in Committee in the Press have been too brief to enable a satisfactory review of the measure as amended to be made, but if this Bill is to be passed in the current Session there may be no opportunity of considering the Bill as reported to the House of Commons before it comes under decision. It is known that this Bill has met with considerable opposition in Committee, and that two schools of thought have been represented. There are those who recognise that there are some hardships in the leasehold system capable of remedy without striking at the root of the system, but compatible with retaining its advantages; whilst there are others whose views may be taken to be expressed at the meeting of the Town Tenants' League, which we reported in our last issue, and who consider the present Bill does not go far enough and who desire leasehold enfranchisement. Those who hold the latter view should study the Memorandum issued by the Council of the Surveyors' Institution, which we published in our issue, May 30, 1924, where this question was very fairly dealt with in a judicial spirit, and the conclusion come to was that it was in the interests of the community to retain the leasehold system, but suggestions were made for its improvement. The Bill carries into effect some of these suggestions, but it goes a good deal farther.

There is one drawback attending legislation of this character that is lost sight of by those whose attention for the moment is focused on attaining one particular object and whose view of results is thus obstructed. Since the passing of the Rent Restriction Acts there has been a great outcry that no landlords will let houses on agreement or lease, but that all houses erected are only offered for sale. The result of this has been the subsidising of local authorities in the Housing Act of 1924 to obtain houses which would be let to the working classes, and in respect of other classes the lack of houses to be let has tended to encourage subsidies, for there is a large section of the population whose means do not permit of their purchasing houses even if there were not other reasons, such as the fact that many persons cannot look forward to being permanently established in one locality, but must take a house on a terminable agreement. Let anyone peruse this Bill, with its complicated provisions, and then ask himself the simple question: "If I had placed capital in house property, should I retain it and offer it on lease and render myself subject to the provisions of a Bill which it will take all the acumen of my lawyer to master, and a possible appeal to the Courts; or should I sell it outright and be quit of it?" The answer to this question must be that no one would willingly enter a stormy arena when sale is possible.

At the Town Tenants' League meeting it was denied that this Bill was a Socialist measure; but if we are correct in what we have said above, its effects must be socialistic in this sense, that it stifles private enterprise in providing houses which will be let, and as it is a public necessity that houses should be available which shall be let, other means have to be sought to provide for this need, and the State or the local authority is naturally turned to, and we get a State or municipal landlord, and the State or the municipality, when it becomes landlord, discovers that the position of landlord is by no means as ideal as it has been described, and that losses are as frequent as profits, and if the latter preponderate, then recourse is made to the taxes or the rates.

As we have said, there are certain abuses or hardships in the leasehold system requiring amendment by a simple and clearly expressed measure, and some of these points are dealt with in this Bill, but we challenge anyone to say they are expressed in clear or simple terms.

As we anticipated in our articles when this Bill was introduced, clauses 4 and 5 have proved the most contentious, as they relate to compensation for goodwill, and the right to the grant of a new lease where the tenant alleges that such compensation will not compensate him for the loss he will suffer. The proceedings in Committee have not been reported at sufficient length to enable it to be said with certainty exactly how these two clauses now stand. We, however, pointed out in the article which appeard in our issue for June 3 that there appeared the risk of a double inquiry, and this point at least has received attention, as the Home Secretary declared that a tenant could not first proceed under clause 4 and then, if dissatisfied with the award of compensation, apply under clause 5 for a new lease, and sub-clause (1) of clause 5 now reads: "Where the tenant alleges that, though entitled to claim compensation under the last foregoing section, such compensation would not compensate him for the loss he would suffer if he removes to and carries on his trade or business in other premises, he may, in lieu of claiming such compensation at any time within the period allowed for making a claim under the subsection, serve on the landlord notice requiring a new lease to be granted to him."

As regards compensation for goodwill, when the Attorney-General, speaking for himself, at the annual dinner of the Suburban Trades Federation on January 31, alluded to this subject, so far as our memory serves us, he was reported as referring to cases where goodwill created by a tenant attached to premises, and yet, when the lease came to an end and the tenant applied for a renewal, an increased rent based on goodwill was demanded from the same tenant. That is a case which, we agree, required attention, for the goodwill attaches to the tenant, and if he continues on in the premises he should not be charged in respect of an increase of value attaching to his own occupation. But clause 4 of the Bill goes far beyond this, as it involves an inquiry in every case as to whether the goodwill created by the tenant attaches to the premises.

In Committee, much was made of the point that the goodwill attaches to the tenant, and if he leaves the premises he takes it away with him, and it was also suggested that claims in respect of goodwill gave openings for fraud.

We can see that there may be difficulty in limiting this Bill to cases where the tenant remains on under a new lease but is charged an increased rent in respect of the goodwill he has created, because that might offer an incentive to landlords to refuse to grant a new lease to the existing tenant on the chance that a better price could be obtained from a stranger in respect of any enhancement of the value that could be attributed to goodwill; but such cases must be rare, and yet under the Bill outgoing tenants may be encouraged to attempt to obtain compensation.

So far as we are able to gather from the brief reports of the proceedings in Committee, the only amendments introduced into clause 4 are that sub-clause (a) now reads: "The sum to be awarded as compensation for such goodwill shall not exceed such addition to the value of the holding at the termination of the tenancy as may be determined to be the direct result of the carrying on of the trade or business by the tenant or his predecessors in title; in determining such value the tribunal shall, if it is proved that the premises will be demolished wholly or in part, or used for a different purpose, have regard to the effect of such demolition on the value of the goodwill." The latter part of the clause appears defective by the omission of any reference to the premises being used for a different purpose as a factor for consideration by the tribunal.

There is another important amendment, which is, that compensation for goodwill cannot be given to tenants of less than seven years' standing. The drawback to legislation of such complication as we have indicated above yet remains that it exposes landlords to the trouble and expense of an inquiry as to claims in their nature uncertain, and thus operates to discourage the letting of premises. Two of the main grievances, viz., that a tenant whose lease is renewed should not be called upon to pay increased rent in respect of the goodwill he has created and which attaches to his personal efforts, and that when a house is going to be demolished the repairing covenants should not be enforced with rigour, we think, could have been dealt with in a two-clause Bill free from all complication.

An amendment substituting the Courts for the special tribunal was not accepted by the Government and defeated in Committee, mainly on the ground that the number of applications under the Act would interfere with the ordinary business of the Courts. In our recent articles we deprecated the creation of the special tribunal, but we are bound to say it formed one of the recommendations of the Council of the Surveyors' Institution, to which we have referred above.

As we have said, it is impossible to denote or discuss the amendments made in Committee, on the material before us, in any detail until the Bill is printed as amended, and if the Bill is to be passed into law this Session, little opportunity will be given for full and careful discussion; yet it is not a Bill to be rushed through in a hurry. We hope that the Government may yet decide to allow the Bill to stand over to the Autumn Session.

R.I.B.A. Intermediate Examination: Historical Subjects.

The Council have decided that a candidate relegated in one of the optional historical subjects in the R.I.B.A. Intermediate Examination shall be permitted to offer a different optional historical subject, if he so desires, upon his subsequent examination.

Measured Drawings of St. Paul's.

With regard to Mr. Arthur F. E. Poley's measured drawings of St. Paul's Cathedral, to which reference was made in a leading note in our last issue, we are asked to state that although the published price of the volume will be seven guineas, the price to subscribers is six guineas. An illustrated prospectus may be obtained from the author at Hampton Hill, Middlesex. The work is being printed for him by the Chiswick Press.

The Widening of Princes Street.

The Corporation of the City of London have come to the following arrangement with the Bank of England in connection with the widening of Princes-street:—

(1) The removal of the railings and stonework in Princes-street on the west side of the Bank at their own cost; (2) the construction by the Bank of a passage-way for pedestrians from Princes-street to Lothbury behind the temple at the north-west corner and the removal of the railings and stonework in front of the temple; and (3) the dedication of the passage-way and land previously enclosed by the railings to the public free of all cost to the Corporation.

This represents on the Bank's part a generosity and a regard for public amenity that may well serve as an example. There is, it should be understood, no obligation whatsoever on the Bank of England to remove these railings, or to construct the passage at the north-west corner, which will add greatly to the public safety. At present the large crowds crossing at business hours from the Moorgate corner of Lothbury to the north-west corner of the Bank's premises, are apt to encroach on the Moorgate-Princes-street traffic stream—an enforced proceeding which has led to many accidents. The removal of the railings will add another two and a half feet to the eastern pavement of Princes-street, at present one of the most congested parts of the City.

(For rates of wages in the Building Trade in Scotland, see page 188.)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

Following is a list of abbreviations:—Borough Surveyor, B.S.; Borough Engineer, B.E.; District Surveyor, D.S.; Clerk, C.; Town Clerk, T.C.; County Engineer, C.E.; County Surveyor, C.S.; County Architect, C.A.; Surveyor, S.; Engineer, E.; Borough Architect, B.A.; Architect, A.

NEW BUILDINGS IN LONDON

Becontree.—SHOP.—New shop premises are to be erected in Valence-avenue, Becontree, for the United Dairies, Ltd.

Becontree.—SYNAGOGUE.—Mr. F. Smith has obtained a site in Becontree-avenue for the erection of a synagogue.

Berners-street.—REBUILDING.—At the foundation stone-laying at the Institute of Bio-chemistry, Prince Arthur of Connaught, who presided, said Mr. Courtauld had increased his gift to the Institute of Biochemistry to £40,000. He has thus now given £60,000 to the Middlesex Hospital, for which the above building is being erected.

Carshalton.—EXTENSIONS.—The Metropolitan Asylums Board has approved the recommendation of the Works Committee that Messrs. Paine & Hobday, F.R.I.B.A., of 2, Millbank-house, Wood-street, Westminster, be appointed to prepare rough sketch plans, report and estimate of the cost of the scheme for extending Queen Mary's Hospital for Children.

Dagenham.—HOUSING.—The London County Council has recommended £1,450,000 for the erection of 2,500 houses and flats at Dagenham.

Downham.—HOUSING.—A sum of £710,000 has been recommended by the London County Council for the erection of 1,132 houses on the Grove-park estate, Downham.

Eltham.—HALL.—The Salvation Army are to build a hall in Edgeworth-road, Eltham. Plans have been approved by the local Council.

Hackney.—DWELLINGS.—In connection with the erection of blocks 1 and 2 of the Shore estate, South Hackney, the London County Council has sanctioned a sum of £55,700.

Hammersmith.—HOUSES.—The London County Council has allotted a sum of £60,000 for the erection of 48 additional houses and 60 flats on the Wormholt estate, Hammersmith.

Hammersmith.—SCHOOL.—A site on the north side of Western-avenue, Wormholt estate, Hammersmith, which is owned by the London County Council, has been allotted for the erection of a school.

Leicester Square.—ALTERATIONS.—Alterations are being carried out to Messrs. Stagg & Russell's premises, Leicester Square. Messrs. Young & Co., 6, Queen Anne's Gate, Westminster, S.W.1, are supplying the steelwork. The architects are Messrs. Herbert O. Ellis & Clarke, 17, Old Queen-street, S.W.1.

Putney.—SHOPS.—Messrs. North, Robin and Wilsdon are the architects for the six shops to be erected to abut on to the western side of Putney-bridge.

Rutland-street.—ADDITIONS.—Messrs. Baillie Scott and Beresford, architects, of Gray's Inn-square, W.C.1, have prepared plans, which have been approved by the Westminster City Council, for additions to 18, Rutland-street, S.W.

St. James's Park.—STATION.—The Foundation Co., Ltd., have secured the contract for the erection of the new offices, etc., at St. James's Park Station, S.W. 1, for the Underground Railway Co. Messrs. P. H. Adams, Holden & Pearson, of Knightsbridge, are the architects, and Messrs. Widnell & Trollope are the quantity surveyors. The contract price is £333,000.

Stoke Newington.—BATHS.—The Stoke Newington Borough Council have definitely decided to proceed with the erection of new swimming baths on a site at 203-205, Albion-road. The plans have been prepared by Messrs. Hopden and Porri, architects, 37A, Finsbury-square, E.C.2, and Messrs. E. G. Browning and Sons, of 37A, Finsbury-square, are the quantity surveyors. The whole scheme is estimated to cost £16,500.

May Housing Costs.

The latest figures of the Ministry of Health show that the average price of houses included in contracts let by local authorities during May was £396 for non-parlour houses. This is a fall of £25, as compared with the figures for April. In seven months, on the basis of monthly figures, there has been a reduction of £47 on a non-parlour house and £28 on a parlour house.

Halifax's New Reservoir.

The cutting of the first sod of the Halifax Corporation new reservoirs at Gorple Valley took place recently. The estimated cost of the scheme is just over £600,000. The approximate capacity of the new works is about 650,000,000 gallons. Gorple Valley lies on the slope of the Pennine Range, midway between Hebden Bridge and Burnley, just inside the Yorkshire border. In adjoining valleys Halifax Corporation possess four other reservoirs, and it will be possible to convey the additional supply of water, from Gorple to Halifax, along the existing aqueduct.

Housing in Canada.

From the Report of the Department of Trade and Commerce Dominion Bureau of Statistics at the General Statistics Branch, Ottawa, Canada, we see that the value of the building permits issued by 63 cities during May was higher by 16.7 per cent. than in April, 1927, and by 11 per cent. than in May, 1926, according to statements tabulated by the Dominion Bureau of Statistics; these showed that the authorisations amounted to $20,532,147 (£4,106,000), as compared with $17,587,536 (£3,517,000) in the preceding month, and with $18,504,296 (£3,701,000) in May, 1926. The total for May exceeded that for the same month in any other year since this record was begun in 1920, while building costs continued lower than in any of the last eight years.

Plumbers' Apprentices.

The annual meeting of the General Council for the Registration of Plumbers was held at the Guildhall. In a speech of welcome the Lord Mayor said there could be no more laudable object than to see that new entrants to the plumbing trade were properly trained and fully competent before they were allowed to practise the important work of water supply and sanitation. The Lord Mayor was elected President of the Council for the year. Mr. Lachlan Macdonald, general secretary of the Operative Plumbers' Association, said plumbing was apt to become over-commercialised, and profit sometimes took precedence of good work. He thought the Council should offer some safeguard to operatives who dared to question the instructions of employers who sacrificed the principle of good work for a few pounds profit.

The Revival of the Blacksmith's Trade.

Report No. 14, issued by the Board of Trade dealing with the Census of Production in British Industry, contains some striking figures and facts relating to the blacksmithing trade. They make it clear that while, undoubtedly, there has been during the last twenty years a shrinkage in the personnel of this staple village industry, there is, nevertheless, plenty of vitality about it yet, and that the man who adapts himself to present-day standards and needs has no cause to fear for future prosperity and success. During the 17 years that have elapsed since the first Census of 1907 was made, the numbers employed in the industry have dropped from 20,663 to 16,992. On the other side of the picture, the total value of the shoeing, general smithing and jobbing work done in the Census year of 1924 is returned in the report as £3,005,000, an increase of nearly 76 per cent. over that of the last Census of 1907 (£1,710,000), while the net annual output value per head has risen to £149, as compared with the £71 of 1907. If these statistics do not decide the ambitious village boy at once to become a blacksmith, they will at least show his parents that, after all, he might go farther and fare a good deal worse.

PROPOSED NEW BUILDINGS & OTHER WORKS*

IN these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owners taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations: T.C. for Town Council; U.D.C. for Urban District Council; R.D.C. for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; B.C. for Borough Council; P.C for Parish Council; M.H. for Ministry of Health; M.T. for Ministry of Transport; C.B. for County-Borough; B.E. for Board of Education; M.A.B. for Metropolitan Asylums Board; and M.W.B. for Metropolitan Water Board.

FOLLOWING is a list of abbreviations:—Borough Surveyor, B.S.; Borough Engineer, B.E.; District Surveyor, D.S.; Clerk, C.; Town Clerk, T.C.; County Engineer, C.E.; County Surveyor, C.S.; County Architect, C.A.; Surveyor, S.; Engineer, E.; Borough Architect, B.A.; Architect, A.

FIRE

OLDHAM.—Copster Mill has been destroyed by fire. The damage is estimated to be about £200,000.

*See also our List of Contracts, Competitions, etc.

The Shortage of Woodwork Instructors.

In consequence of a dearth of qualified woodwork instructors, the Board of Education have informed local education authorities (Circular 1389) that they will temporarily recognise for appointment persons who pass the revised first examination in woodwork of the City and Guilds of London Institute. The L.C.C. Education Committee have now decided to recognise as eligible for appointment to the London service persons holding this provisional qualification. The Committee are arranging to hold classes for skilled craftsmen and others who desire to qualify for employment as instructors by taking the City and Guilds examination. The classes will be held weekly at the Shoreditch Technical Institute, Pitfield-street, N.1, on Friday evenings and Saturday mornings over a period of thirty weeks (Fridays from 6 p.m. to 9 p.m., and Saturdays from 9.30 a.m. to 12.30 p.m.), beginning Friday, September 2. The Friday evening meetings will deal with English and mathematics. The Saturday session will be devoted to woodwork (theory and practice). Further particulars can be obtained from the Education Officer, The County Hall, Westminster Bridge, S.E.1.

Charing Cross Bridge.

Mr. Ammon asked the Prime Minister, in the House of Commons, if he would state why the committee of engineers, representatives of the Government, the London County Council, and the Southern Railway Company, which he recommended to inquire into and estimate the cost of a bridge and its approaches at Charing Cross, in furtherance of the recommendation of the Royal Commission on cross-river traffic in London, had not been appointed.

Col. Ashley, who replied, said that on May 14 he requested Messrs. Mott, Hay and Anderson, the well-known firm of engineers, to undertake this inquiry in conjunction with Sir George Humphreys, the chief engineer of the London County Council, and with the assistance of Mr. A. W. Szlumper, the chief engineer of the Southern Railway. These gentlemen had been actively engaged upon the examination of the problem ever since.

BOOK REVIEW

Stone Decay and its Prevention. By J. E. Marsh. (Oxford: Basil Blackwell.) Price 3s. 6d.

In this book the author has dealt in an interesting and forcible way with the decay of stonework and its prevention, a subject which is often ignored by building owners. The researches of Dr. Angus Smith and the reports of the various Commissions on stone preservation are briefly reviewed and traversed. The many theories of the causes and treatment of stone decay are well worth reading. The treatments suggested for the prevention of stone decay are placed in three classes—surgical, therapeutic, and prophylactic. The author states his views against cutting back the decayed face of stonework, preferring to leave the decayed part to act as protection to the good stone behind, unless the decay has been allowed to get into a very bad state, a view which will hardly obtain general acceptance. The treatment of stone with preservative and similar chemical compounds has been likened to the use of drugs, and the many chemicals used and the probable result of their application are dealt with. The new compound recently introduced by Professor Laurie, called "Silicon Ester," is mentioned, which is of a transparent nature, and when applied to the stone makes no appreciable alteration in the colour and appearance, but this system would seem to be a somewhat expensive way of dealing with the matter. The general opinion of the author seems to be that no stone preservative is likely to remain effective for more than five years. The best policy is to attempt to prevent the decay altogether. This has been accomplished in former times by very simple methods, and the author gives many suggestions which are well worth an extended trial; at any rate, the expense of the treatment proposed should not be very great.

Probably a long time will elapse before public opinion is in favour of thoroughly washing down the stonework to the façades of buildings so as to free them from a l soot and dirt, and thus preventing them from becoming nests for living organisms, yet this is strongly recommended. At present the façade of a building that is covered with scot and filth is considered t be in a romantic condition, but a similar state of things in the drawing-room would not be tolerated for a moment The author has produced a book which should be widely read by architects, builders, building owners, and others concerned in the maintenance of our buildings, which hitherto have largely suffered through neglect.

An Elizabethan Timbered Facade.

Whilst stripping the stucco which covered an old house at Ashby-de-la-Zouch owned by the Grammar School Governors, workmen discovered a timbered facade of the Elizabethan period. It is of picturesque design. The black oak wood is in excellent preservation, and experts state that the revealed front is a fine example of sixteenth-century architecture.

Excavation of Roman Camp.

Arrangements have been made in connection with the Montgomeryshire Archæological Society for excavating the Roman Camp at Gaer, Forden. Operations will shortly begin under the supervision of Mr. F. N. Pryce, of the Department of Greek and Roman Antiquities, British Museum, and Mr. T. Davies Pryce, assisted by students from the University College of Wales, Aberystwyth.

Successful Action Against Municipal Trading.

We are informed by the Federation of British Industries that successful action has recently been taken by a private firm to limit the development of municipal trading. The action was taken by Messrs. William Briggs & Sons, Ltd., who are members of the F.B.I., against the Dundee Corporation.

Shop Premises, Lewisham.

With reference to the new shop premises, Lewisham, for Messrs. Chiesman Bros., illustrated on page 132 of last week's issue, we learn that "Hy Rib" floors supplied by the Trussed Concrete Steel Co., Ltd., of Cranley Gardens, S.W., are being used throughout the building.

HOLYROOD PALACE

While in residence at Holyrood Palace their Majesties approved plans submitted by Mr. J. Wilson Paterson, M.V.O., M.B.E., Architect for Scotland, H.M. Office of Works, for the redecoration of the Throne Room. The design shows a panelled treatment of the walls in oak, reserving some of the panels for original or copies of Royal portraits. The Throne will occupy a recessed position on the west wall, where the present Throne is situated. The recess will be flanked by two Doric columns raised upon a platform of three steps, and the furnishings of the Throne will harmonise with the tint of the specially treated oakwork. An enriched plaster ceiling is also to be provided of the late 17th century type appropriate to the period of the State rooms, where the enriched ceilings are so remarkable a feature of the Palace.

NEW BUILDINGS IN SCOTLAND

Dundee. — Wash-houses. — An £18,000 scheme for baths and wash-houses in the Fourth Ward of Dundee has been considered by a Town Council Committee.

Edinburgh.—Buildings.—The Edinburgh Dean of Guild Court has granted the following:—Tod Brown—bungalow at Cammo-road, Barnton. Mrs. Williamina Mowat—annexe to dance hall at 71, Gilmore-place, Topping & Co.—four houses at Campbell-avenue. City—twenty houses at Featherhall, Corstorphine. John Hardie & Son—bungalows at Crewe Toll, Ferry-road.

Grangemouth.—Extension.—The Dean of Guild Court has granted permission to Scottish Dyes (Ltd.) to erect at their factory at Earls-road a boiler-house estimated to cost £800.

Keith.—Repairs.—The general trustees of the Ecclesiastical Properties of the Church of Scotland are to have an independent report drawn up regarding the putting of the buildings of Keith-hall and Kinkell Parish Church into a proper state of repair.

BUILDING TRADE WAGES IN SCOTLAND.*

*These prices apply to *new buildings only*. They cover superintendence by foreman and carry a profit of 10 % on the prime cost without establishment charges. A percentage of 1¼ should be added for Employers' Liability and National Health and Unemployments Acts, and from 1s. 6d. per £100 for Fire Insurance. The whole of the information given on this page is copyright.

TRADE NEWS

Portland Cement.

At the General Meeting on July 7 of the Ship Canal Portland Cement Manufacturers, Ltd., the chairman, in the course of his speech, said that they had supplied their "England" Brand Cement to, amongst others, the following important consumers :— Mersey Docks and Harbour Board; Liverpool Corporation; Henry Boot & Sons, Sheffield; Sir Robert McAlpine & Sons, London; Messrs. Courtaulds, Ltd.; and Melville, Dundas & Whitsin, of Glasgow. But he would not have them think that it was solely the large contracts which interested them. With an output such as their works turned out, the large and regular contracts were, of course, a necessity; but it was a particular part of instructions to their salesmen to attend to the demands of the small user and to give to him the service, quick dispatch, and low price which were only possible by reason of their capacity, and he could assure them that the same care was taken to satisfy the demand of the local builder for a ton of cement as that of an important corporation for a thousand tons. The directors of the Company have recommended a dividend of 7½ per cent., less tax, on the ordinary share capital for the year.

Opening of New Sports Ground.

Brigadier-General R. J. Kentish, D.S.O., Hon. Organising Secretary to the National Playing Fields Association, opened the new sports ground of Messrs. G. A. Harvey & Co. (London), Ltd., at Hervey-road, Blackheath, on Saturday last. The Brigadier-General was supported by the Mayors of Greenwich, Lewisham, Deptford, and Woolwich. The ground is the gift of the directors of the firm, and has been given under the National Playing Fields Association scheme, for which H.R.H. the Duke of York is appealing for funds. In declaring the ground open, Brigadier-General Kentish said he was very pleased to open such a beautiful ground, and he hoped that many firms would follow the example of Messrs. G. A. Harvey & Co. by providing means of recreation of this kind for their employees. Mr. Sydney Harvey, director of the firm, in the course of his remarks, said he was negotiating for more land adjoining the present ground. The sports ground is situated in a very pleasant position, and is only a few minutes' walk from the Heath. After the opening ceremony various sports were held among the employees, and later on in the evening dancing took place on the green.

An Annual Report.

After providing for depreciation, taxation, bad and doubtful debts, and making further provision for depreciation of investments, the accounts of Petters, Ltd., for the year ended March 31st, 1927, show a net profit of £34,063, compared with £28,516 last year. There was brought forward a net balance of £18,048, giving a disposable total of £52,111. The directors recommend a dividend on the ordinary shares at the rate of 6 per cent. per annum, less tax, transferring to aircraft development reserve fund, raising same to £10,000, £3,400, to reserve fund, raising same, together with £10,000 already transferred by the directors from taxation reserve, to £70,000, £10,000, carrying forward £24,811. Report states that the result of the year's trading shows continued improvement over recent years. As already notified, the company acquired during the year the debentures and balance of share capital in Vickers-Petters, Limited, the name of which company has been changed to Petters (Ipswich), Limited.

New Welsh Reservoir.

The Taf Vechan (Breconshire) Water Supply Board's new Pontsticill reservoir and works were recently opened by Lord Buckland. The quantity of water in the reservoir at the time of the opening was 2,000,000,000 gallons, and the cost of the reservoir and works has been £1,300,000.

ESTIMATING ON RIGHT LINES

Everyone whose business it is to quote for building work should master the principles upon which estimating is based. These principles are clearly explained and illustrated in

'HOW TO ESTIMATE'

by J. T. REA,

a unique and invaluable work which is not excelled in thoroughness or in scope by any similar book known.

Fourth edition (now ready). 540 pages. Price 15s. net (by post 15s. 9d.). Containing thousands of prices and hundreds of examples of analysis, showing how a builder can make up rates for himself. In view of the difficulty of fixing standard prices under present conditions, the author has included an important series of Adaptation Tables and Percentages (corrected to February, 1927), *which show how rates may be adjusted to meet variations at any time.*

Before purchasing any other book on this vitally important subject, you are invited to inspect this—the standard work which is in use by over 30,000 builders.

A Copy will be sent by return, and your Remittance refunded if the Book does : : not satisfy your requirements : :

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXXIII. No. 4409. AUGUST 5, 1927.

THE LIVERPOOL CENOTAPH

"BY 66 votes to 18 Liverpool City Council have accepted a tender for the erection of the Liverpool Cenotaph on St. George's Plateau. A request that a full-sized model of the memorial should be exhibited on the Plateau for public judgment as to the suitability of the site was rejected."

Many of our readers who have followed the discussion on the question whether the Plateau in front of St. George's Hall, Liverpool, is the proper place for the Cenotaph which is to be erected in honour of the Liverpool men who fell in the war will, we venture to think, view this decision of the City Council with surprise and regret, especially when they bear in mind that the very reasonable request for a model was made by thirty-four architects practising in Liverpool, and was supported by many architects and others in various parts of the country.

The discussion of the question has been marked by a good deal of feeling which it is difficult to understand, and as the action of the protesting Liverpool architects has been so misrepresented we feel justified in making some further observations on the points at issue. Following the award in the Cenotaph competition we had, as we have had in so many recent architectural competitions, certain criticism from, we are told, "disappointed competitors," though if this represents the truth it is only part of the truth, for of the thirty-four Liverpool architects who asked the City Council to allow a model of the proposed Cenotaph to be erected, only some half-dozen were actual competitors, and it cannot be said of the remainder and all those many architects in Manchester, London, and elsewhere who think a mistake is being made, that they are disappointed competitors; but even if this could be said, do the rules of the competition game always preclude "disappointed" competitors, who should know more of the facts than anyone else, offering criticism? Surely circumstances sometimes alter cases? To err is human, and if a palpable injustice is done or some blunder contemplated, is no one ever justified in coming forward in protest? We know as a fact that in all walks of life and in all human activities, we are not called upon to hear in silence the mistakes of others, and the right of protest in the interests of all is in the final resort permitted. In the assertion of the suggestion in the Cenotaph controversy that criticism comes from disappointed competitors we have had a good many extraordinary misrepresentations, such as "a desire to set aside the assessor's award," whereas we know that of the thirty-four signatories to the petition to the Lord Mayor of Liverpool asking for a full-size model of the design as selected, not one has any wish to see Prof. Budden supplanted as architect to the Memorial, nor do we believe Mr. Dawber, the late President of the R.I.B.A., or Professors Pite and Richardson, or any one of the numerous critics of the site for the Memorial, would have expressed any sort of opinion on a question which would be of merely local interest but for the fact that St. George's Hall is far more than a building of local interest. We have heard it suggested that the Liverpool City Council and some citizens resent what is called outside interference, but the widespread interest which has been evoked was, if dispassionately considered, a tribute to what architects and artists everywhere regard as a national heritage, and should have been welcome, especially as this so-called interference took the form of a reasoned support of the local architects, who had the public spirit to make what we believe to be a disinterested request in the knowledge that their action would probably be misunderstood and that they would be told they were trying to upset the award and that their criticisms should have been made when the conditions were drawn up. Too much, we think, can be made of the last argument, which loses a good deal of its apparent force when it is remembered that the competition conditions stated that the designer of the Cenotaph had to set aside a definite sum for the purpose of erecting a full-size model of his design. We consider it a quite satisfactory explanation that, though the local architects had their misgivings as to the appropriateness of the site, especially for a memorial of a certain type, they believed the model was to be erected for everyone to see and that nothing would be erected which was not entirely appropriate. They and other critics, while admiring Prof. Budden's design, do not think it a suitable work to be erected on the site which, now that the Disraeli statue has been removed, affords an unencumbered Plateau suitable for civic or military pageantry, of the kind illustrated on p. 195, representing the recent Royal visit to St. George's Hall. We should have thought the admirable use which was made of the Plateau on this occasion would have convinced most people that, apart from all other considerations, the Plateau ought to be left unencumbered for such occasions as this.

Some part of the consideration of the question turns on the function of the architect as critic and as instructor of the public. Whether an architect should or can criticise the work of living architects has been discussed at length in the pages of *Architecture* as well as in our own pages, and our realisation of the difficulties inherent in such criticism appears to be borne out in the discussion on this Cenotaph question. But an eminent critic who is well known to our readers appears to think it the duty of the architect to criticise, for he has told us that architects should publish the same kind of reasoned criticism of prominent new buildings which they make to one another in private. "Let one or more of them in each town become public critics of architecture. Let them explain at large why the character of such and such a building was good or bad, how it composed or did not compose, whether the detail was consistent or inconsistent, whether the materials used were suited to the town or not. Let them, in short, give the sort of criticism that was given in every school of architecture to each student's design. In doing that they would probably tread on endless toes, but they would at once awake interest. He had ventured to do it himself for Liverpool, and the architects in that town had taken it all in excellent part. One or two buildings which seemed to him unworthy of their sites had already been refronted."

For ourselves, we are afraid the suggestion, in the light of this Liverpool controversy, is unworkable, but it is as much a justification of the action of the Liverpool architects to-day as when it was spoken in 1921.

The discussion at the Liverpool City Council which resulted in the decision recorded above does little, if anything, to assist in understanding the unwillingness of the Council and their advisers to allow a model of the Cenotaph to be seen by the public. Nobody has suggested that the Council should turn back. Those taking part in the debate and those who have taken part in the newspaper discussion are all agreed that the Cenotaph must go on. They have only thrown doubt upon the site, not on the Cenotaph, and the architects of Liverpool have advised the Council to make quite certain they are right by putting up a model before they erect the Cenotaph in stone. The motive behind the request is to warn the public and the Council that there is a danger that as laymen they do not understand; therefore the advice has been "act cautiously." It is obvious to architects that at present the Council have very little idea how this Cenotaph will look when erected. Only when a model is up would they realise the effect on the Plateau and St. George's Hall. To attribute self interest to those competing architects who signed the memorial is unjust, because not one of them has criticised the design; but whether they and those who have supported them are right or wrong in their doubts and fears, time will show; and whether right or wrong we believe they have shown a disinterested public spirit which is to be admired, and which it is unfortunate we do not have more of from men of good will and sound judgment in our city life.

NOTES

The Registration Bill. We understand that the Select Committee of the House of Commons which has been considering the Architects (Registration) Bill has found itself unable to report the Bill to the House. But in view of the fact that the clauses of the Bill had been amended by the Committee in the light of the evidence submitted, and that the final vote of five to four not to report the Bill to the House does not represent the views of the Committee of 11 members as a whole, the Committee hope that an early opportunity will be given to the House next Session to consider a Bill framed on the lines of the Bill as amended. We learn that but ten of the eleven members of the Select Committee were present on the occasion of the taking of this vote, and that the chairman, in view of his position, did not vote. This result may so far be reckoned as satisfactory, and we shall probably see the Bill, modified by the incorporation of the suggestions that have come from the various societies and bodies, re-introduced next session.

A View of the Liverpool Cenotaph. The view of the Liverpool Cenotaph, shown in the Council Chamber, Liverpool, and reproduced in the daily papers, was, a correspondent informs us: "taken from a point at least 10 ft. above the plateau pavement. This, to the man in the street, is very misleading; he can only get this point of view from the top of a tram car. Why was not the drawing made giving the view a man will get when standing on the plateau? The answer is obviously because it is wished to give the impression that the monument will not obstruct the view as much as it is known it will in reality. There is nothing on the drawing which gives the slightest indication of the size of the Cenotaph. No human beings are shown on the drawing from which one can judge the size. It is quite impossible for anyone other than an architect thoroughly to appreciate such a drawing. It is therefore obvious that the Council passed the amended design without understanding it."

The Norwich War Memorial. It seems as though history were repeating itself in the case of the Norwich War Memorial, for there are conditions of similarity between this and the Liverpool cenotaph which appear to call for some careful consideration of a model on the site. It is averred that eventually the memorial will have to be removed from the site selected for it; but apart from this, the objections to the scheme as proposed appear very forcible. There is a strong feeling of hostility to the scheme amongst many of those capable of forming an opinion. In order, apparently, to prevent the memorial obtruding itself unduly against the Guildhall, it looks as though its position and size will reduce it to an effect of insignificance. Market stalls and passing cars will apparently largely obstruct any view of it, and prevent its being noticed except in a most casual way. It is really unfortunate that the best available advice is not sought in an affair of this sort. The Council of the Norwich Society have issued a protest (on July 29) against the site adopted, and one would naturally have expected the view of the ancient Buildings Advisory Committee to have been ascertained in the matter. It is difficult to believe that Sir Edwin Lutyens, the author of the design, has been made fully acquainted with all the conditions which affect the result.

Recognition of the Architect. On another page we publish a letter from a correspondent in which he refers to a recent Note in these columns on the question of the lack of due recognition of the architect by the lay Press in their descriptions of the openings of new buildings. We cannot help thinking that our correspondent has missed the point of our Note. We did not suggest that the name of the architect should be mentioned by the lay Press "as an advertisement," but rather so that the public may realise that buildings do not, so to speak, come to life of their own volition. It is common knowledge that a building must have a builder, but how many people know when an architect takes part in the erection of that building? It is essential that such facts should be known by the public, if architectural education is to progress.

London Squares. It is satisfactory to note that Mr. Chamberlain has announced the constitution of a powerful committee, under the chairmanship of Lord Londonderry, to consider the present situation of the London Squares, and, if found necessary, to devise the best means of preserving them as open spaces. The Minister doubted whether the question of opening them to the public, and

The Sagrada Familia Church, Barcelona: General View. (*See article on page* ~~189.~~ 198)

especially to school children, would be included in the Committee's terms of reference. The retention of these squares is one of the most vital of our bounden duties, and its necessity is beyond dispute. The secondary question of their use when preserved is certainly better left until their preservation is finally assured.

Art training of the Middleman

The Report of the Committee of the British Institute of Industrial Art on this subject is a worthy effort to promote the higher education of the middleman, with the object of raising the standard of British Industrial Art. The improved training of the distributor, it is hoped, will lead to this result, and particulars are given of the methods by which this desirable object is to be attained. A very reasonable view is presented of the limitations surrounding such an object, and of the degree in which beauty may be included "within the limits of the prevailing fashion." In any reasonable interpretation of fashion there is nothing which precludes this result, which should be much fostered through the better appreciations of the middleman. Buyers and sellers, however, too often play for safety and barring lines for which sale is pretty well assured, are either shy of risk, or lacking in appreciation of what may be better. As the report states, "adventure, daring and experiment are the very life blood of successful enterprise, and the best interests of commerce, as well as of art, cannot be served by a purely negative policy based on the avoidance of risk and distrust of the new and unknown." This useful report can be obtained from the British Institute of Industrial Art, 38, Bloomsbury Square.

The Decadence of Craftsmanship.

Though so much is said and written on the subject of craftsmanship, the increasing absence of anything in the nature of intimate craftsmanship in architecture is one of the most disquieting features. Beyond the mere conventional use of the craftsman's art, much more a survival of old habit than intrinsic purpose, there is little to be seen on modern buildings, which, so far as the craftsman's tools are concerned, have little left of vital or intimate character. The time limit is no doubt a principal cause of this, that we no longer "make haste slowly" in our hurry for results. There is a particularly unreal contention that it is a matter concerned with mental swiftness or otherwise, that one man thinks at a far greater pace than another. In this application the contention is a false one altogether, and merely condones what is, in fact, the lack of appreciation of the nature of architecture. If the architect is too often impatient of the artist, it is not because his mind moves swifter, but that he is less of an artist, that he does not feel the loss to architecture of that intimate side of thought and imagination which is so much the last splendour of a building? If so, this is not to say there are not distinguished exceptions to this state of things, to which fullest recognition is due.

Graveyard Monuments

Much useful information is incorporated in the report issued by the British Institute of Industrial Art on the subject of suitable stones for use in graveyard monuments. A list is given of particular stones which they regard as technically suitable for monumental work, the price per cubic foot, or ton, and particulars of cost of freight in the varying situation of the quarries. In regard to foreign marble, a large proportion of this is imported in the form of ready-made monuments, encouraged by the depreciation of the exchange. The reasons are really not far to seek for the low average of the monumental masonry of the churchyard and cemetery, which lies in poverty of design and scamped work. The presence of craftsmanship, sensitive to the possibilities lying in the material and capable of using them, has largely given place to a substitute lacking in both these qualities. At the same time we can recognise an improvement in the public taste within more recent years, and we hope this will continue, and the efforts of the Institute should not be without their influence in bringing this about. The Report adds that "the revived use of British stones is one of the essential conditions of a healthy revival of the almost lost craft of graveyard monuments in this country." The credit for the most extensive example of improvement in the taste, design and material of graveyard headstones is due to the Imperial War Graves Commission, for whose good work in this direction abroad we are greatly indebted.

St. George's Hall Plateau, Liverpool, on the occasion of the recent Royal Visit. Showing value of unencumbered space.

GENERAL NEWS

Professional Announcement.

Mr. H. T. A. Chidgey, F.S.I., has removed from 18, Adam-street to Cecil Chambers, 76, Strand, W.C.2.

Mr. Solomon J. Solomon, R.A.

We regret to record the death of Mr. Solomon J. Solomon, R.A., after a long illness, at White Cliffe, Birchington, on July 27, in his 67th year. Although his greatest success was in portraiture, his subject pictures also are well known, and during the war he rendered signal services as a pioneer in camouflage.

India House in Aldwych.

The London County Council has accepted the offer of the High Commissioner for India to rent for £6,000 a year, on a 999 years' lease, a site in Aldwych at the junction with Montreal-place. The land has an area of about 12,450 sq. ft., with frontages to the two streets of about 134 ft. and 103 ft. respectively.

St. Ives: Proposed New Town Hall.

It was announced at a recent meeting of the St. Ives Town Council that Mrs. Elizabeth Noy, of St. Ives, who died recently, had left five thousand guineas in her will to the St. Ives Town Council for the erection of a new town hall and municipal buildings.

Plans for Empire Exhibition at Sydney.

At the meeting of the Premiers' Conference on July 21, Mr. Bruce, the Prime Minister, outlined the plans for a great Empire Exhibition to be held at Sydney in 1931, to coincide with the opening of Sydney Harbour Bridge, which is the greatest work of its kind in the world. The proposals for the exhibition are supported by all the States.

The Liverpool Cenotaph.

Liverpool City Council on July 26 accepted a local tender, amounting to £8,356, for the erection of the proposed cenotaph on St. George's Hall Plateau. A memorial, signed by 33 architects, protesting against the cenotaph being erected on that site, as it might interfere with the architectural beauty of the Hall, was read. Sir Archibald Salvidge said he would have been more impressed with the memorial if it had not been signed by so many unsuccessful competitors.

New "One Way Street" Sign.

The Ministry of Transport is considering an alternative design for the "one way street" sign. The present sign has the direction, "One way street. No entry" painted in white letters on a blue board on a yellow wooden post. The new design submitted is that of an ornamental iron standard, on which is a rectangular sign cut out in metal with a white background, which can be illuminated at night. It bears the words, "Keep left. One way only." The standard is surmounted by an orange lantern. One of these posts has been erected outside the Ministry of Transport in Whitehall Gardens, but so far the Ministry has not given its approval to the design, which is still under consideration.

The Temple Buildings.

The following letter has been addressed to the *Times* from a correspondent who signs himself "Templar":—

"It is surely time that parts at least of the Temple should be scheduled as ancient buildings by H.M. Office of Works. It is only necessary to draw attention to (1) the steps approaching the Middle Temple Hall, the balustrades and lamp columns of which, after being repaired with hewn stone, presumably of a kind similar to that of the fabric repaired, have been painted all over with a smooth coat of grey cement. Comment on the size of the lamps borne by these massive columns is unnecessary. (2) The east and west walls of the same hall, which have been furnished with reflectors containing electric lamps for the purpose of illuminating the windows, which were never designed for the purpose of being pierced by rays of violet light of uneven power, but to be permeated by the light of day. The result of this, unfortunate from within, is disastrous from without, where the projection of these trumpery-looking pieces of ironmongery breaks the elevation, especially of the west wall, in the day-time, and at night the blaze of light falling on a portion of the wall suggests an advertising hoarding."

New Johannesburg Railway Station.

Plans have been prepared for the construction of a new central railway station in Johannesburg. The structure, which is to cost £350,000, will consist of a large central hall built in concrete after the Roman style, 200 ft. by 100 ft., with a dome-shaped waiting-room on the lower floor level. There will be space for parking motor vehicles.

COMPETITION NEWS

Senior Boys' and Girls' School, Loughborough.

Loughborough Education Committee invite designs for a new Senior Council School for 360 boys and 360 girls, proposed to be built on the Limehurst Estate. Particulars of the competition may be obtained on application to Mr. E. A. Jarratt, Secretary, Education Offices, Loughborough, not later than September 1.

Open-air Baths, Morecambe.

The awards in this competition are as follows:—

1st (premium £100), Messrs. A. W. S. and K. M. B. Cross, London.

2nd (premium £50), Mr. Thomas H. Mawson, Lancaster.

3rd (premium £25), Messrs. Easton and Robertson, London.

The buildings are to be erected on the Central Promenade.

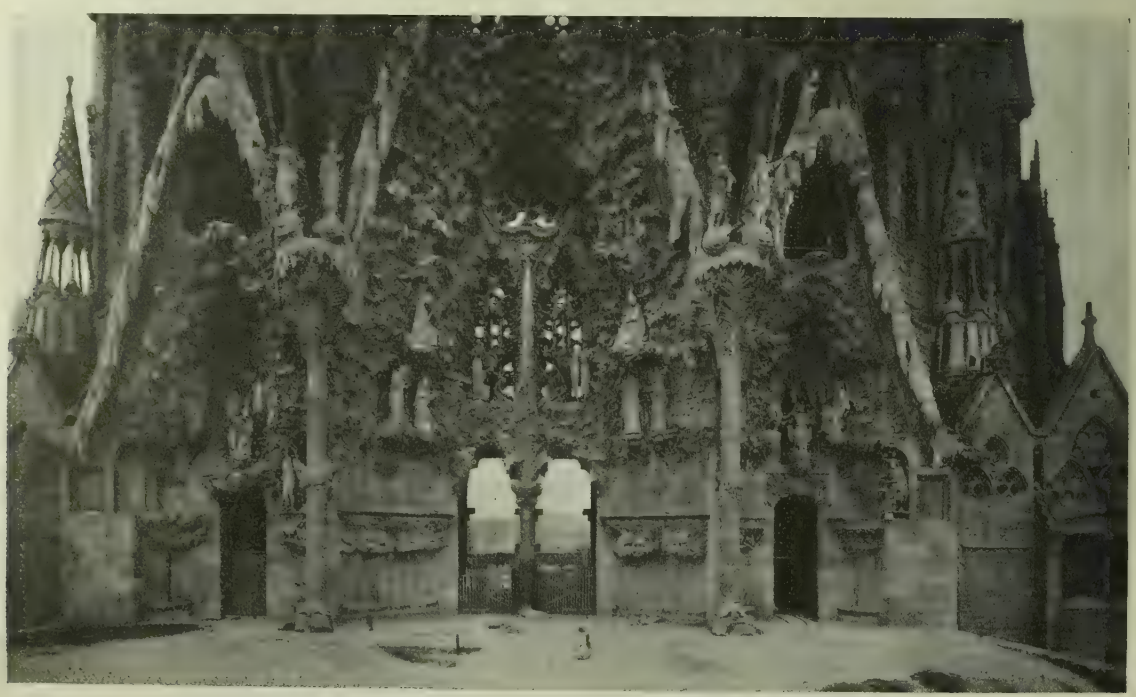
The first portion of the scheme, costing £30,000, provides for open-air baths of the latest design, whilst the second portion, costing £33,000, is for Turkish and medicated baths and the construction of a promenade.

Lytham Girls' School Competition.

Mr. Arnold Thornely, F.R.I.B.A., the assessor in this competition, has made his awards as follows:—

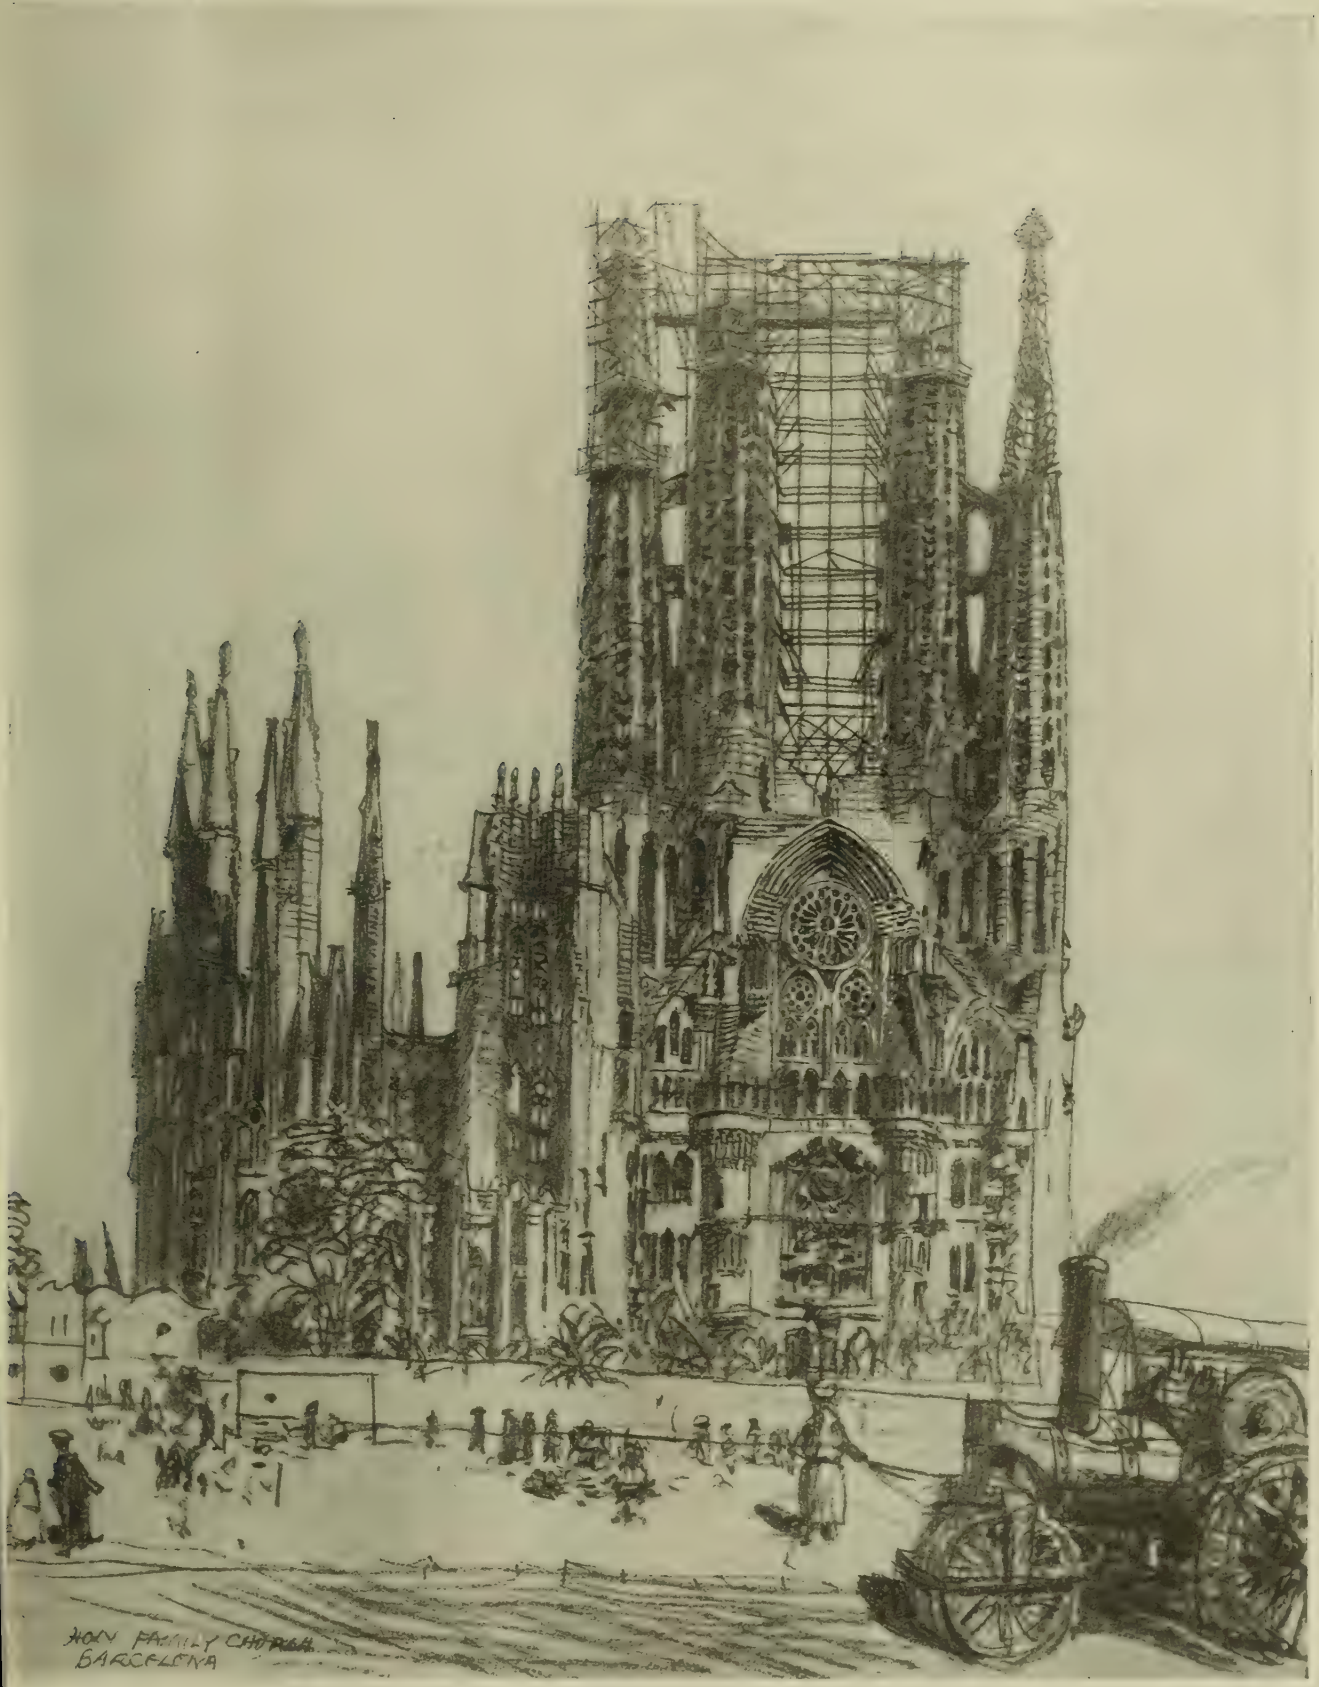
1st (premium £250): Messrs. Rees and Holt, 64, Rodney-street, Liverpool.

2nd (premium £150): Messrs. Marshall and Tweedy, 54, Grey-street, Newcastle-upon-Tyne.



3rd (premium £75): Messrs. Adshead, Topham and Adshead, 14, St. Ann's-square, Manchester.

4th (premium £50): Messrs. A. W. S. and K. M. B. Cross, 45 and 46, New Bond-street, London, W.



The designs and reports have been on view at King Edward VII School, Lytham, all this week, and the exhibition closes to-morrow (Saturday).

We illustrate the first and second premiated designs this week.

The promoters desired to provide school buildings in the first instance suitable for not less than 250 day scholars and planned with a view to convenient extension for an additional 100. The cost was not to exceed £50,000.

The Sagrada Familia Church, Barcelona: South Transept Porches.

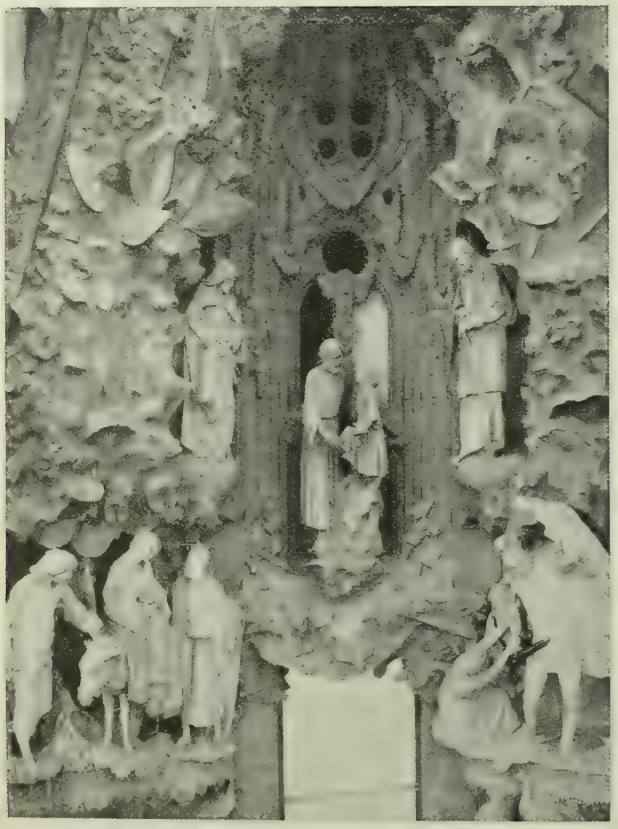
The Sagrada Familia Church, Barcelona.

From a drawing by Mr. P. M. Stratton.

THE SAGRADA FAMILIA (HOLY FAMILY) CHURCH, BARCELONA

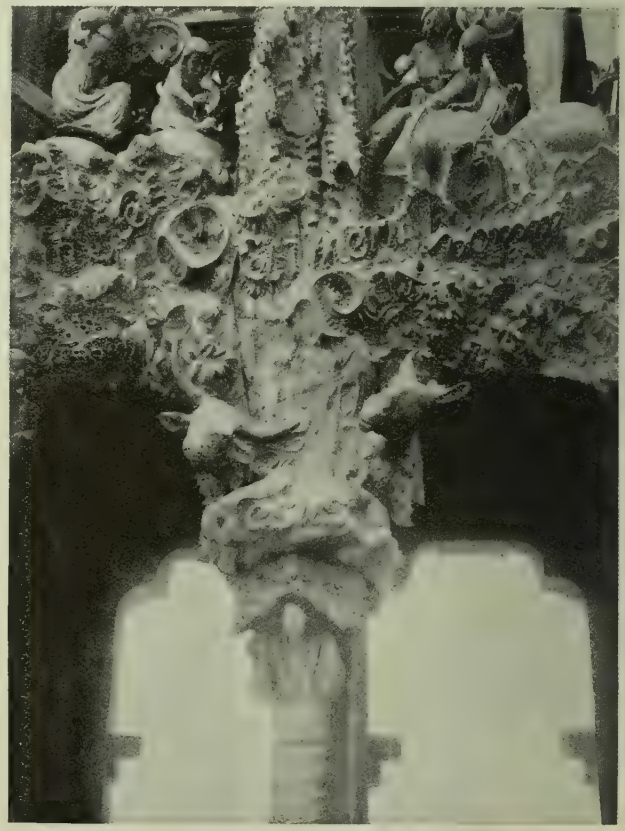
By P. M STRATTON, A.R.I.B.A.

The church was begun in 1882 as a votive and expiatory offering, and a witness to the Catholic Faith. It has been mistakenly called a cathedral. So far the cost has been about £200,000, including £7,000 for the site; and the final cost can hardly be less than £2,000,000. The progress after 1882 was for a time rapid, the first altar in the crypt being dedicated in March, 1885; but since the death of the founder, Señor José Bocabella, the pace has slackened. The crypt is finished, the south porches need only statues to complete them, the western spire of the south transept is finished, and the remaining three spires beside it are almost at the same height, though the central two of these need many feet to their summits; the apse of the east end has been raised to the springing of the vaulting, and the abutments and pinnacles built for it; the cloisters have been commenced, and the entrance to them from the south porches finished. Where the apse joins the spires of the south transepts, there are certain cracks due to unequal settlement, but apparently movement has now ceased; the stone used for the interior of the church, being exposed, is weathering badly. The first architect was Señor François de Villar, and under his direction the crypt was planned and begun; but he early relinquished the work to Señor Antonio Gaudi, who has impressed his genius and strong individuality on the design as a whole down to the smallest detail, and on the artists under his direction. Gaudi is now dead, and although he has left models and drawings for the work, it seems doubtful whether the same individuality will be maintained. Only 30 men are now employed; in the crypt an altar is being finished, and overhead the spires of the south transept are being completed.



The main church (*i.e.*, not the crypt church) consists of a cross, the western end slightly elongated, the eastern end, which is built over the crypt, made apsidal. Each arm of the cross is divided into a central nave 50 ft. wide, and four aisles to the western arm, two aisles to the others, each aisle being 25 ft. wide, with radiating chapels round the apse. There are entrances to the end of each arm, except the east, that on the west being the most important. Round the church and joining together the three arms are the cloisters, which serve also to square off the east end and mask the sacristies. The high altar is placed under the second arch to the east of the crossing, and is approached by a flight of steps which, however imposing it may be from the western entrance, will stand as an obstacle to spaciousness when it is seen from the north or south entrances. This arrangement is foreign to the general planning of Spanish churches, in which the crossing is kept as an open space between the high altar on the east and the enclosed choir on the west, as at Westminster Abbey.

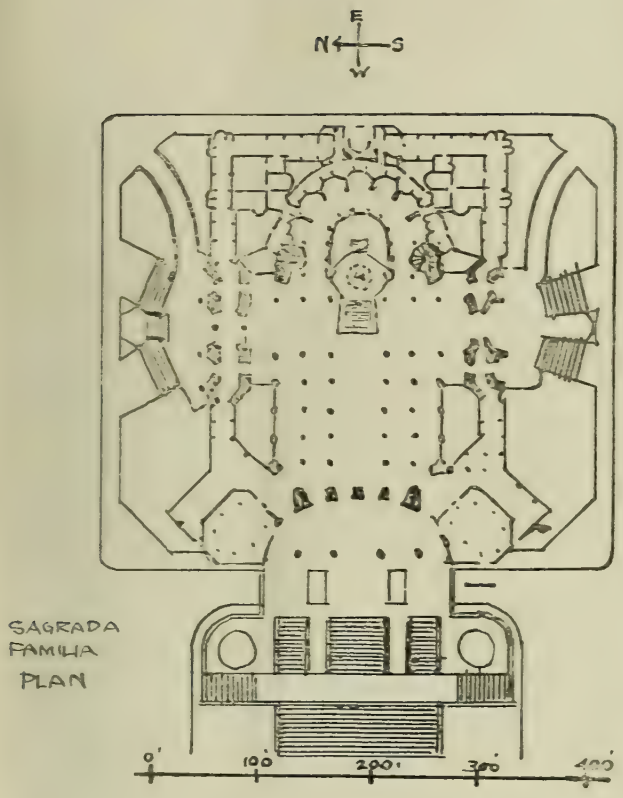
The planning of the approaches is magnificent; the site slopes down from east to west to a considerable extent; still the floor of the church is above the road on the east side. Flights of steps are planned on north and south sides, divided into two parts by a platform jutting out like an embrasure towards the road. On the west side the street itself is shown bridged over and imposing flights of steps, characteristic of Renaissance rather than Gothic churches, lead up to the central platform, of which the south flank sustains a large fountain, the north a great forge, to symbolise the purifying elements of water and fire. The crypt is planned under the apse and high altar—a central space vaulted with heavy ribs, a square "east" end and apsidal "west" end, with ambulatory and chapels. A stair on each side of the high altar leads down to the crypt.



The choirs are in galleries; the gynecæum, or gallery, for the women's choir of 1,500 voices is over the outermost aisles of the nave, and thus runs across the west end of the church, with an opening and platform into the great west porch, so that the voices within can lead the voices of those without on great occasions. The children's choir of 700 voices is placed in a gallery over the ambulatory. The organ is divided into four, and occupies four platforms between the transepts and the ends of the choirs, on the choir levels, and each platform is supported by a quartette of piers.

A longitudinal section from east to west is given. The crypt is considerably lighter than many Spanish churches, Barcelona Cathedral notably, but still it is very dark. Gaudi, on being appointed architect, excavated round part of the apse, and raised the springing level of the vaulting, to allow some natural light to penetrate the chapels. The main church is 147 ft. high from the floor in the nave to the inner ridge of the vault; over part of the sanctuary the vault comes round and leaves a centre lunette to let in the light. Windows are formed in the outer walls, and in the vertical west wall of the crossing between the lower and upper ridges; through these openings the western sunlight will pour on to the apse.

The centres of gravity have been worked out to fall within the piers and walls, as shown on the drawing. but stability and extreme slightness of supports are achieved together by making the main arch piers lean inwards. The effect of this convergence may be successful in the nave and transepts and apse, where the piers and vaulting come towards a centre. In the aisles the one pier leans away from its perpendicular responding pier, and the knowledge of the reason is not likely ever to reconcile the senses to an unpleasant effect. From the west entrance, however, where the angle of vision to the apse is about 60 deg., the view will be very grand; the entry to the immediate enjoyment



Detail of Side Entrance, South Transept.

Capital of the Nativity Column, South Transept.

The Sagrada Familia Church, Barcelona.

of it will be one of the most dramatic experiences in architecture.

The central spire is shown as being carried over the crossing on four quartettes of piers, such as carry the dome of St. Peter's, Rome, but, compared to them, like bean sticks to old oaks. The angle piers are the same size as the nave piers, and will not block up the vistas down the aisles, and the light effect of the crossing arcades will be happily ensured. The feeling will be different from that of any church or building, even of Santa Maria del Mar at Barcelona, which is probably the lightest-looking church of Christendom; the Sagrada Familia will have more the effect of a steel church, or of a ribbed organism, such as a great ocean liner before it is plated. But with this skeletonic effect will be such a vision of great space, especially of height, that style will be of secondary appeal.

The spires are placed as follows:—The main spire over the crossing, 524 ft. high, as compared with Salisbury 400 ft., Amiens 422 ft.; at each porch four spires, the inner two on the west porch 410 ft. high. The church will group as a series of spires, very close to one another, the distance from centre spire to north porch 100 ft., and to west porch 200 ft.; the effect will be of a crowd of spires; perhaps too great a crowd for the eye to follow the design or the subordination of outer spires to central one. There is this further consideration, however: the church was conceived as an act of defence against an age of atheism and materialism; and a certain closeness in the gesture of it, like a closed square of pikemen, seems proper and fit. The building is open on all sides, and can be walked round; so that it will have pre-eminently the poetry of movement; the view will be always changing. One series of spires will seem to pass in front of another and then to drop behind as it is left, and another series rises to the foreground of the picture.

The building already seems extraordinarily high, and can be seen from the northern railway rising above the tall apartment houses and factory chimneys.

Señor Gaudi has been possessed by a very clear vision of the technical means for expressing the idea of the church. He has used outside a hard stone from Montjuich, south of Barcelona, which is a warm dark brown in colour; for the inside a white stone, softer and easily carved, has been brought from Villa Franca. Some of the carved work and sculpture on the south front is in a cream-coloured freestone, lending itself to great breadth and suavity in execution. The crypt, of course, is only partly by Gaudi. It is strongly modelled; the vaulting ribs and piers are very marked; the capitals boldly carved with naturalistic oak foliage; and throughout this part of the building the Spanish flair for strength inclines to clumsiness. The stairs, however, lead up in winding flights with that kind of strong grace which is authentically Spanish, and which marks also the great boss of the central vault. The doors to the sacristies are splendid with heavy iron and bronze; confessional boxes, seats, pulpit, the metal holders for the holy water stoups (real shells sent from the Philippines)—all these are arresting. The bracket lamps are of traditional Gothic design; one of the hanging lamps is of silver, with pieces of faintly coloured glass two inches wide strung on silver chains, giving a glow to the work when the lamp is lit. The stained glass in the windows is, in general, of a rich purple, and delineates cherubs and the word "Sanctus"; the design is repeated all round the crypt.

The most beautiful thing in the crypt, however, is the mosaic pavement designed by Gaudi—a wide border of vine leaves round the church, work of the purest, broadest kind both in form and colour and a hopeful sign for the completed work of the building.

Over the walls of the crypt the buttresses and windows of the apse to the main church have already been erected; the work is on sound traditional lines similar to English "Geometrical." The buttresses are broad, rise to a great height, and end in pinnacles, all vigorous and clean in line. This apse seems designed as a foil to extravagances elsewhere. The only idiosyncratic note is the enormous lizard which descends in wavy line on each buttress to end as a gargoyle.

The south front needs a preparation of the mind before it can be appreciated. It has been called "unhealthy," "debased," "the worst architecture ever." The porches raise doubts as to being architecture at all; for the structural lines are lost almost everywhere, and only occasionally are seen, merely sketched in, through a smother of foliage, texts and figures, stars and grotto work. Practically the whole porches are carved, and if they had no structure above, might be judged as sculpture. The great spires make that impossible, and the mind rushes to any similar work, however remote the affiliation, the thought of which will relieve the feeling of strangeness and make this amazing *tour de force* human and familiar. For mere richness there is the memory of Rheims, or the west entrance to Toledo, where an Englishman is startled by a representation of the Christ with Shavian smile and beard. At Toledo, though, there are structural lines evident and representative of the weight carried by the wall, and the sculpture is enclosed by them.

In Spain the inspiration for sculptured figures still comes from a religious reaction of Christendom against Islam. Granada fell but a generation before the English Reformation, of which the prejudices are still current here. The Moor forbade by the tenets of his religion all illusions of natural objects. The Transparente in Toledo Cathedral is the most complete instance of this religious reaction; the whole wall surface from floor to vault is finished with sculptured texture of figures and clouds; a pair of angel's legs "desnudo" project ridiculously from beneath the Table of the Last Supper; the figures go arching overhead to a high window which floods them with light; there is the actual effect of a flight of angelic beings through the air, an illusion at least as strong as Murillo gives to the Sentimentalist, or El Greco to the Intellectualist, of a similar idea. Because fault can be found with this transparente, it does not follow that the principle of, as it were, incarnate stone used structurally is wrong. The Greeks used caryatidæ with considerable satisfaction to the world's artistic conscience.

Certainly Gaudi has adopted the principle itself in these south porches, and throughout the work has never forgotten it. The porches are dedicated to the Nativity of Jesus, and the subject is thrust upon the spectator; the story is told to the last half inch, the structural lines of the building are all but sup-

pressed, as though the true reserve in this case were the reservation of the whole stage for the drama of the birth and boyhood of Christ. The very columns and caps represent palm trunks and branches of Palestine and Egypt.

The spires, probably like all successful spires, are contained within a parabola. These four of the south front follow an actual parabolic line. The piercings indicate the spiral ascents within; but the great number of openings gives a somewhat all-overish effect, even from a distance; like an American skyscraper. The one finished spire has an enormous finial, built up of stone faceted to catch the light, and covered with coloured Venetian glass mosaic, which sparkles in the sun. There is a look of distortion about the upper portion of the finial as of a vertebrate thing holding itself upright with difficulty; at the top is a flattened round shape, spread like a sunflower, and framed with glass beads. The natural bizarrerie is increased by the newness; it reminds one of a garish and *outré* electric sign. When it becomes dirty and its rawness is covered with grime, the appearance may be rich and not unbecoming to this exotic sky. The central spire actually is to have a cross to be lit up at night by electric light. Probably Gaudi knew what he was doing, though no one else will, until the whole forest of spires grows up.

The Englishman feels himself on surer ground beneath the archway into the cloisters. Here, too, is dramatic effect, but all obtained by familiar means, and with architectural technique. The flexibility of Gothic may astonish those who have forgotten it, the depth of carving may seem excessive until the blessed shade of Grinling Gibbons whispers assurance. No one can disregard the composition, rich, intellectual, dramatic.

The portion of the church already built is now a notorious landmark. The Catalonian workman knows it and likes it, watches the slow movement of the scaffolding about it which keeps it alive, and picnics in its one completed porch, humorously regarding the carved beasts and birds and men, and the quixotic lances of the spires.

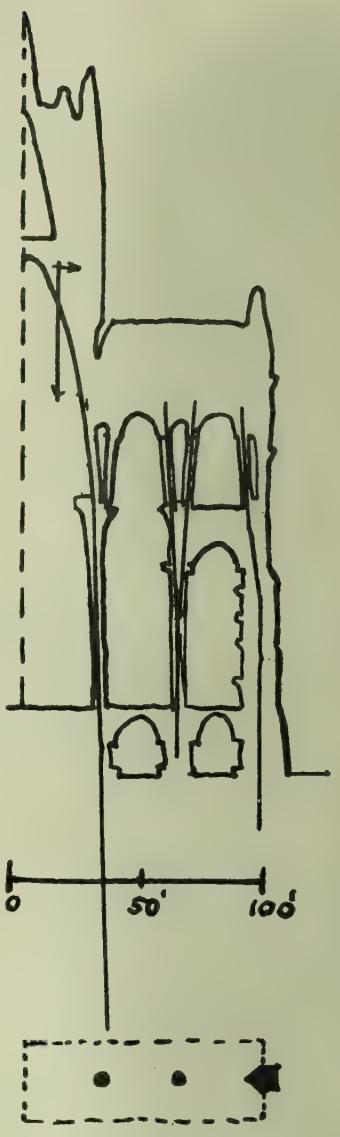
Carved Font Base in a Wall.

When the plaster of a wall in the south aisle of the parish church at St. Minver, Cornwall, was being removed, a richly carved stone weighing 1½ cwt. was discovered. Experts at the South Kensington Museum have identified it as the base of a small font or a very large pillar piscina of Norman date. There are traces in the interstices of the carving of red paint or distemper. It has been decided to preserve the stone by mounting it on a cylindrical base and placing it in the church.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

The Liverpool Cenotaph.



Sir,—The Liverpool Corporation, in instituting a public competition for their War Memorial, adopted a course which the R.I.B.A. have long since recognised. The site was laid down in the conditions of the competition. It was the function of the assessor to choose the best design for that site, and it is the duty of architects who wish to support the regulations of the R.I.B.A. to accept his award as final. To suggest that the chosen design is inappropriate for the site is, to all intents and purposes, to suggest that the assessor's award be varied or set aside.

A full-size model might enable the architect and Committee to judge the mass and general outline of the design. If amendment is thought to be necessary, it is the concern only of the architect and his committee. If, after its selection by an assessor, the design of a public monument is to be approved by 28 local architects, six unsuccessful competitors, and those members of the public who care to intervene, no finality on the question can ever be reached.

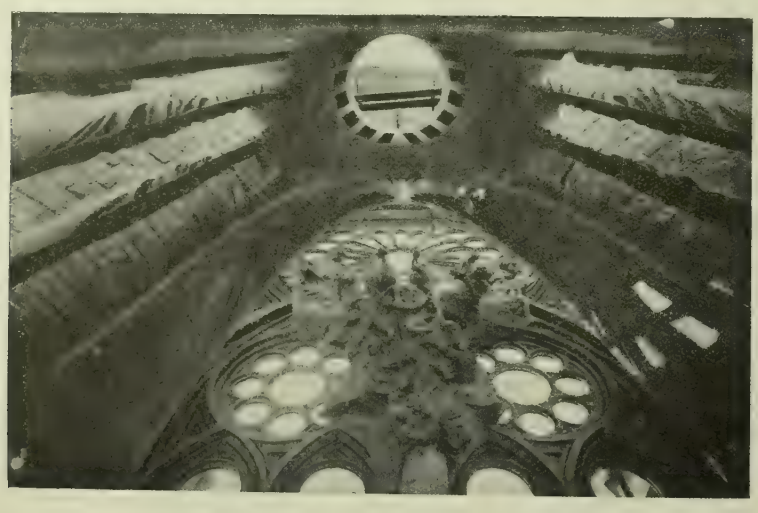
When the anonymous "F.R.I.B.A." claims that "the Cenotaph is a local project and St. George's Hall is a national heritage," he belittles the purpose of the Memorial. The part played by the men of Liverpool between the years 1914 and 1918 was no less heroic than that of the men of any other town. Those of us who think that the fallen should be commemorated by a monument on the finest site in Liverpool would ask that the chosen architect be allowed to proceed with his design without hindrance. Professor Budden is well able to surmount the difficulties presented by the site and to pay respect to the architecture of a building which he is specially qualified to understand and peculiarly fitted to appreciate.

H. Chalton Bradshaw.

[We are glad to print Mr. Bradshaw's letter, to the general application of which no one is likely to take exception. But does he not rather beg the question when he says: "Those of us who think that the fallen should be commemorated by a monument on the finest site in Liverpool would ask that the chosen architect be allowed to proceed with his design without hindrance"? We believe Mr. Bradshaw would be one of the first to object to the erection of the Cenotaph on the proposed site if he, too, thought, as so many Liverpool architects and others do, that it would spoil St. George's Hall and the Plateau. Moreover, it does not follow from the suggestion that if the chosen design is inappropriate to the site, the assessor's award must be varied or set aside, as at least one other appropriate site is, we believe, available.—Ed.]

SAGRADA FAMILIA
DIAGRAM OF STRESSES.

Recognition of the Builder.



Sir,—I was pleased to see your reference in last week's "Notes" to the question of the "Recognition of the Architect" by the lay Press when giving an account of the opening of new buildings. I am sorry you did not think it well to carry your comments a stage further and refer to the recognition of the builders—in similar terms.

I venture to suggest that many firms of builders and contractors take pride in the work entrusted to them, and financial reward is not always their first thought. Beauty of design may be marred by inferior workmanship.

The designer of a building is frequently referred to when its merits are being discussed, but the name of the builder is usually forgotten.

Builder.

[*** We certainly had no wish to ignore the builder. We specially referred to the architect because his name is so often omitted by the lay Press, which cannot be said of the builder—at all events to the same extent.—See Note on page 194.—Ed.]

Harrogate Pavilion.

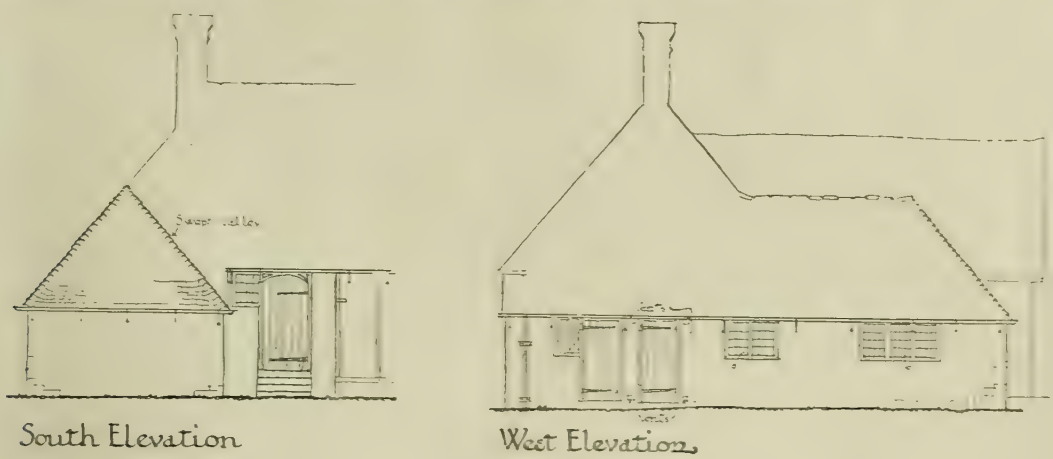
The design which we illustrate this week has been prepared by the Deputy Borough Engineer (Mr. L. H. Clarke, A.R.I.B.A.) for a building near to the Cornwall-road side of the Valley Gardens, to accommodate about 800 people. The building is about 200 ft. by 75 ft. There is a central hall with a dome light, and on each side of the hall is a wing, terminated by semi-octagonal bays. At one end of the building is a refreshment buffet. To the north side of the main hall is the rostrum, with entrances on each side from a carriageway leading from Cornwall-road. There are also entrances from the south side of the building.

Mr. C. E. Rivers, A.M.Inst.C.E., is the Borough Engineer.

Village Hall, Trusler's Hill.

This building has been erected for the architect's client on his own private estate, immediately opposite his own house. The large porch is intended primarily to serve as a shelter for friends' cars. The building consists principally of the main hall, with men's and women's lavatory accommodation, and attached to this hall is an engine-room, with electric-light generating plant, which supplies the hall, the house, and a couple of farms; a fuel and heating store, and workshop with a bench running along one side, under which are arranged dog kennels. The openings to the kennels may be seen behind the wire fence on the right-hand side of one of the photographs. The walls are built in multi-coloured local stock bricks with a mortar joint, with the introduction of a certain amount of flint rubble filling to the buttresses. All woodwork is in oak, left its natural colour. The main roof is supported by three open oak timber trusses, which form a feature of the inside of the hall. The roof is covered with local hand-made sand-faced tiles, with laced valleys.

Messrs. Norman & Burt, of Burgess Hill, were the general contractors. Metal casements and glazing were supplied by George Wragge, Ltd.; electric-light installation and plant by Page & Miles, of Brighton; and central heating by Mr. W. H. Fellingham, of Brighton.



Messrs. Clayton & Black, AA.R.I.B.A., were the architects.

Lytham Girls' School Competition.

We illustrate this week the first and second premiated designs in this competition, the full awards of which are given on page 196. The block plan of the second premiated design will be found on page 212.

THE GENEVA COMPETITION

By S. W. MILBURN, F.R.I.B.A.

The exhibition of the 377 designs submitted in this competition was held in the Election Hall, Geneva, from July 3rd to the 24th, and the promoters are to be congratulated upon the very excellent manner in which they were displayed to the public. The drawings were all carefully pinned up on wide-spaced and well-lighted screens, and everything possible seems to have been done to enable them to be seen in comfort. After a first brief survey of the exhibition, one is absolutely amazed at the excellence of the work displayed. Probably never before has such a wonderful show of architectural competitive designs been held. Every conceivable solution of the problem seems to be here, worked out in detail and illustrated by beautiful perspectives and plan and elevational drawings.

The programme and rules of the competition called for an Assembly Hall, Secretariat and Council Chamber to be provided at a cost not exceeding £520,000. The programme also indicated that not only was accommodation of the most modern and practical kind to be provided but the building should also symbolise in style and outline the pacific ideals of the twentieth century. The result of the competition, viewed from the standpoint of the award, speaking bluntly, is a failure, the jury deciding they were unable to recommend that any of the designs submitted should be carried out. After a careful inspection of the drawings it is very evident that the fault of the failure of the competition lies not with the architects, who have excelled themselves, but with the promoters of the competition who, it would appear, have expected too much for the limited expenditure allowed.

The accommodation required was very clearly and concisely specified with exact areas to work to. Taking an average design, the total cube contents including corridors, halls, stairs, etc., worked out at 300.000 cubic metres which divided into £520,000, represents approximately 1s. per cubic foot. From this simple calculation it becomes at once evident that the building must be of a super economical character to provide the accommodation at the stipulated cost, and all temptation to add the extra foot or two in height or width which often makes all the difference in the proportion of a building had to be ruthlessly put on one side.

The jury must undoubtedly have had a very difficult task, rendered more so by the fact that competitors were apparently expected to do the impossible and produce a monument worthy to rank with other great buildings of the world at a cost not exceeding 1s. per cubic foot. The eighteen designs selected for special mention are all excellently planned and detailed schemes, and of the nine prize winners one has no hesitation in acclaiming their selection, they are one and all truly great solutions of a very difficult problem. Of those designs that did not obtain an award, so excellent are they, one would be quite justified in saying that, had the twenty-seven prize winners been eliminated from the competition, there would still remain a very good selection to choose from.

A visit to the exhibition certainly clears up the remark in the jury's report as to many of the competitors not adhering sufficiently closely to the conditions. At least 50 per cent. of the designs have broken some minor condition such as the finish of the plans in black and white, and on the question of cost a very large proportion of the schemes could not be erected for anything like the sum stipulated. One can quite understand the jury overlooking some minor departure from the conditions, but on the question of cost it is surprising to find a design receiving a mention which the author estimates will cost approximately 7d. per cubic foot. This particular design is modelled upon the lines of the Palais de Justice, Brussels, and with large and spacious halls and ornamental staircases would cost nearer £1,000,000 than the £520,000 estimated for.

One of the most striking features of the exhibition is the way in which the national architectural characteristics of the various nations competing stand out. German architecture is represented by some tremendously powerful work which rather impress one as too commercial looking, but in the freedom and proportion displayed in massing and grouping, the architects appear to have caught something of the spirit that inspired the designers of our mediæval cathedrals. Generally speaking, their plans are rather long drawn out and fail to achieve that compactness and ease of communication so desirable in a building of this description. This may partly be due to the fact that in many cases the office corridors have direct lighting on one side. The French and Italian designs are characterised by very careful detailed plan and elevational drawings and by the wonderful setting up and rendering of their perspectives.

It is generally easier to criticise and find fault with than commend a prize-winning design, as seldom, if ever, is the perfect solution evolved; but the writer, who may claim to have some knowledge of the subject, having spent six months in studying the conditions and preparing a design, was greatly impressed with the scheme submitted by Julien Flegenheimer (Geneva) and H. P. Nenot (Paris). This design, one of the nine prize-winners, exhibits an almost perfect solution of the requirements for quick and easy communication between the Secretariat and Assembly Hall, one of the most difficult problems to solve. The necessary accommodation is provided in an extremely clever and straightforward manner; the elevations, though not very impressive, are pleasing and well proportioned, and the scheme is one of the most economical submitted, and could be carried out within the limit of cost laid down. (See page 210.)

In conclusion, after viewing the exhibition, one is constrained to say that the profession has done its utmost for the League of Nations. Let us then hope, when the project is again reviewed at the meeting of the League's Assembly in September, the decision taken will do justice to this magnificent and inspiring response.

Bridges on the Upper Thames.

At a meeting of the Surrey County Council at Kingston, on July 26, the Chairman (Alderman E. J. Holland), said they had held a meeting of the Plans Committee that morning with regard to the projected three new bridges over the Thames, the object being to secure the general approval of the Finance Committee to expenditure which would have to be incurred in the very near future in the promotion of a Bill for the Thames bridges in the next session of Parliament. Speaking for the Middlesex and Surrey County Councils, he said they were not prepared to go forward without an assurance on the part of the Ministry that a grant of 75 per cent. of the capital cost would be forthcoming in respect of the bridges and the approaches, and a grant of 50 per cent. in regard to the roads. He asked the Council to give their general approval to incur the necessary expense, £17,000, for preparing plans and generally for promoting the Bill, which had received the sanction of the Finance Committee.

This was agreed to.

SOCIETIES AND INSTITUTIONS

R.I.B.A.

Maintenance Scholarships in Architecture.

The Board of Architectural Education of the R.I.B.A. announce that the following R.I.B.A. Maintenance Scholarships in Architecture have been renewed for the academic year 1927-1928 :—

Austin K. Brown (Newcastle), School of Architecture, Armstrong College, Newcastle-upon-Tyne.
E. L. W. Davies (Colchester), Bartlett School of Architecture, University of London.
B. I. Day (Bideford, Devon), R.W.A. School of Architecture, Bristol.
H. Jackson (Birmingham), Birmingham School of Architecture.
E. J. White (Hull), Bartlett School of Architecture, University of London.

The Scholarships are intended to enable promising students to attend an approved course at one of the Schools of Architecture recognised by the R.I.B.A. for the purpose of exemption from its examinations.

Following are notes from the minutes of the Council for July 11 :—

Membership of the Council.—The President, Mr. Walter Tapper, after welcoming the new members of the Council, referred to the services rendered by those members who had retired since the last meeting, and, on his proposition, a cordial vote of thanks was passed in their favour and recorded on the minutes.

Presentation of Drawings to the R.I.B.A.—The Council passed a cordial vote of thanks to Lady Harriet Lindsay for her kindness in presenting William Burges's competition drawings of Edinburgh Cathedral to the Institute. The drawings will be exhibited in the meeting room at the inaugural meeting in November.

The British School at Rome.—The Council have appointed Mr. H. M. Fletcher, Chairman of the Board of Architectural Education, as one of their two representatives on the Council of the British School at Rome for a term of three years.

Board of Architectural Education.

(*a*) Distribution of Schools of Architecture.—A comprehensive and valuable report on the subject of architectural education in Great Britain has been prepared by a special committee of the Board. This report, which deals particularly with the various methods of entry into the profession and the distribution of the schools in which architecture is taught, has been adopted by the Council, and the Board have been requested to give effect, as far as possible, to the recommendations and suggestions contained in it.

(*b*) *The School of Architecture, Edinburgh.*—The Council, on the recommendation of the Board, have approved the proposed five years' part-time course at the Edinburgh School of Architecture for the purpose of exemption from the R.I.B.A. Intermediate Examination.

(*c*) *The School of Architecture of the Municipal School of Arts and Crafts, Southend-on-Sea.*—The Council, on the recommendation of the Board, have granted this School exemption from the R.I.B.A. Intermediate Examination, under the usual conditions, for its three years' full-time day course of architecture.

(*d*) *The R.I.B.A. Intermediate Examination.*—The Board reported the results as follows :—Examined, 85; Passed, 30; Relegated, 55; Percentage passed, 35 per cent.

The Council approved the recommendation of the Board that a candidate relegated in one of the optional historical subjects should, if he so desired, be permitted to offer a different optional historical subject upon his subsequent examination.

(*e*) *Examination in Professional Practice for Students of Recognised Schools exempted from the Final Examination.*—The Board reported the results as follows :—McGill University, Montreal, November, 1926: Examined, 5; Relegated, 0; Passed, 5.

(*f*) *Special Examination in Design for former Members of the Society of Architects,*

Durban.—The Board reported the results as follows:—Examined, 1; Relegated, 0; Passed, 1.

(*g*) *The R.I.B.A. Travelling Card.*—The Board have prepared a précis of information received from the R.I.B.A. Hon. Corresponding Members with reference to the regulations for sketching and measuring public buildings in various countries in Europe. This précis will be published in the Institute Journal and Kalendar and also in the R.I.B.A. Travelling Card.

(*h*) *R.I.B.A. (Anderson and Webb) Scholarship at Cambridge University School of Architecture.*—The Council have approved the recommendation of the Board that, in future, students of Girton and Newnham shall be eligible, on the same conditions as men, for the R.I.B.A. (Anderson and Webb) Scholarship at the Cambridge University School of Architecture.

(*j*) *R.I.B.A. Maintenance Scholarships.*—The Council, on the recommendation of the Board, have decided to offer for competition this year one Maintenance Scholarship of a maximum value of £100 for two years, tenable in the fourth and fifth year courses at a school recognised for exemption from the Final Examination by a student who has already completed satisfactorily a three years' course in a recognised school.

Studentship.—The following Probationers were elected Students of the R.I.B.A.:—

Allen, Ernest Cecil Porter (A.A.).
Bartholomew, George (Glasgow School of Architecture).
Beattie, Isobel Hogg Kerr (Edinburgh College of Art).
Carr, Frank Henry (Passed I.E.).
Cartwright, Thomas Nelson (Passed I.E.).
Cooper, Kenneth James (Passed I.E.).
Crosby, Edmund Lionel (Passed I.E.).
Day, Ronald Frederick Richard (A.A.).
Evans, Charles Herbert (Passed I.E.).
Ford, Hugh Hubbard (Passed I.E.).
Gale, Arthur Harry (Passed I.E.).
Grove, Edward Atkins (Passed I.E.).
Hall, Arthur Leonard (Passed I.E.)
Hall, Douglas (University of Liverpool).
Hamilton, Archibald Oliphant (Glasgow School of Architecture).
Hartland, Eric John (Passed I.E.).
Hartley, William Suthers (Passed I.E.)
Hedges, Harold Mason (Passed I.E.).
King, Frederick Stanley (Passed I.E.).
King, Jack Ian (Special exemption granted).
Lane, George Charles (Passed I.E.).
Lane, Howard Ross (Passed I.E.).
Lorimer, Allan Gordon (Glasgow School of Architecture).
Lyons, Edward Douglas (Passed I.E.).
MacGillivray, Ian Donald (University of Liverpool).
Maclennan, John (Robert Gordon's Colleges, Aberdeen).
McEwan, Margaret Jean (Glasgow School of Architecture).
Morris, Robert P. (Robert Gordon's Colleges, Aberdeen).
Mungeam, Reginald Herbert (Passed I.E.).
North, Guy Wood (Passed I.E.).
Parker, Hedley (Passed I.E.).
Pearson, Charles Edward (Passed I.E.).
Penn, Colin Troughton (Passed I.E.).
Reuben, Samuel Simon (Passed I.E.).
Ridout, Alfred Henry (Passed I.E.).
Russell, James Bell (Glasgow School of Architecture).
Shepherd, George Henry (Passed I.E.).
Smith, Alfred (Passed I.E.).
Stableford, Samuel Horace Sawbridge (Passed I.E.).
Tattersfield, Leonard (Passed I.E.).
Thompson, Eric (Passed I.E.).
Thomson, James Kilpatrick (Glasgow School of Architecture).
Vaughan, Reginald (Passed I.E.).
White, Edmund Julian (Passed I.E.).
Worthington, Thomas Shirley Scott (University of Manchester).

Note: I.E.=Intermediate Examination.

Board of Architectural Education: Conference with Teachers of Building.

On Tuesday, July 26, the Board of Architectural Education and the Science Standing Committee of the Royal Institute of British Architects held a Conference with representative Teachers of Building who have been undergoing a course in London arranged by the Board of Education. The Conference took place in the Galleries and was largely attended. The Chairman of the Board of Architectural Education, Mr. Henry M. Fletcher, F.R.I.B.A., M.A.Cantab., presided, and a paper on "Instruction in the Application of Science to Building Construction" was read by Dr. R. E. Stradling, Director of Building Research, Department of Scientific and Industrial Research. (We give a report of this paper in this issue.)

In the subsequent discussion, the following speakers took part:—Messrs. Hugh Davies (H.M.I.), P. J. Waldram, L.R.I.B.A., J. L. Manson (H.M.I.), B. S. Townroe, F. Shaw (Wigan), Norman Howdill, B.Sc. (Tottenham), Alan E. Munby, F.R.I.B.A., Martin S. Briggs, F.R.I.B.A. (H.M.I.).

The teachers subsequently inspected the following examples of Architects' Working Drawings, which were exhibited in the Galleries:—House at Stowell Hill, Ashley Chase, Dorset (Mr. E. Guy Dawber, P.P.R.I.B.A., A.R.A., architect); the Church of St. Mary, Harrogate (Mr. Walter Tapper, P.R.I.B.A., A.R.A., architect); Kensington Kinema (Messrs. Granger & Leathart, AA.R.I.B.A., architects).

CARDIFF TECHNICAL COLLEGE.

Department of Architecture and Civic Design.

The following awards have been made as a result of the Sessional Examinations at the School of Architecture at the Technical College, Cardiff. Professor A. C. Dickie, M.A., F.S.A., A.R.I.B.A., was the External Examiner.

Fifth Examination: For the Diploma awarded at the end of the five years' Full-time Day Course. (Individual students who are awarded this Diploma are exempted from the R.I.B.A. Final Examination with the exception of the subject of Professional Practice.)—D. J. Williams, Diploma; H. Bull, Diploma, subject to completion of six months' practical experience.

Fourth Examination: P. G. Budgen.

Third Examination: For the Certificate awarded at the end of the three years' Full-time Day Course, exempting from the R.I.B.A. Intermediate Examination.—Miss O. E. Price; C. J. Bartlett; C. L. Bugler.

Second Examination: F. K. Aitken; J. W. Bishop; C. A. E. Thatcher.

First Examination: H. J. Hughes; W. H. Maton; C. Rosser; J. P. Ward.

ASSOCIATION OF ARCHITECTS, SURVEYORS AND TECHNICAL ASSISTANTS.

Following is a list of the new officials and Members of Council of this body:—

President: Mr. H. R. Surridge (Kettering).

Vice-Presidents: Mr. C. F. Deffee, L.R.I.B.A. (Dublin); Mr. C. B. Parkes, L.R.I.B.A. (Birmingham); Mr. C. McLachlan, A.R.I.B.A.; Mr. J. H. Scott, P.A.S.I., A.M.I.Struct.E. (Harrogate).

Trustees: Mr. J. W. Denington, L.R.I.B.A.; Mr. A. M. Laurie; Mr. R. G. Strachan, F.S.I.

Hon. General Treasurer: Mr. S. Sanders, P.A.S.I.

Hon. Auditors: Mr. A. Boulton, L.R.I.B.A.; Mr. S. R. Day, L.R.I.B.A.

Hon. Editor, "The Keystone": Mr. C. McLachlan, A.R.I.B.A.

Members of Executive Council: Messrs. H. G. Avery, A.R.I.B.A.; J. Batty, A.R.I.B.A.; P. G. Bridge; N. F. Cachemaille-Day, A.R.I.B.A.; H. W. Chester, A.R.I.B.A.; P. W. Dawney, P.A.S.I.; J. W. Denington, L.R.I.B.A.; C. W. Denton, A.I.Struct.E.; J. W. M. Dudding; Major A. S. Hinkley; C. H. Holden; W. H. Hamlyn, A.R.I.B.A.; L. A. F. Ireland, L.R.I.B.A.; W. Leicester, L.R.I.B.A.; D. E. Masters, A.R.I.B.A.; A. W. Metcalf; Capt. A. S. Reeves, L.R.I.B.A.; C. Sheppard; E. A. D. Tanner, A.R.I.B.A.; John Mitchell, General Secretary.

Repairs at Hampton Court Palace.

After four years' work the repairs to the finely-carved roof of Wolsey's Great Hall at Hampton Court Palace have just been completed following the extensive damage done to the timbers by the death watch beetle. Complete restoration and reinforcement of the roof with girders were necessary, many of the old wooden beams having been almost completely eaten away by the beetle. The undamaged beams have been specially treated with preservatives, and the new ones have been specially graded to harmonise.

THE TRADE UNIONS AND TRADE DISPUTES BILL.

Report Stage, House of Lords.

The amendments made in the Trade Unions and Trade Disputes Bill on the Report Stage in the House of Lords were few in number. The Lord Chancellor, in pursuance of the promise he gave in Committee, moved an amendment to clause 1, sub-clause (4), that no regulation under section 2 of the Emergency Powers Act, 1920, shall make it an offence for a person merely to have ceased work or refused to continue to work or to accept employment. We explained this matter in our issue for July 22.

On the understanding that if another view were taken in the other House no pledge must be taken to have been given, the Lord Chancellor accepted and suggested amendments to clause 3, sub-clause (2), which provides: "In this section the expression 'to intimidate' means to cause in the mind of a person a reasonable apprehension of injury to him or any member of his family, or of violence or damage to any person or property; and the expression 'injury' includes other than physical or material injury." After the word "family" the words "or to any of his dependants" were added, and in the definition of "injury," for the words "includes injury other than physical or material injury" were substituted "includes injury to a person in respect of his business, occupation, employment, or other source of income, and includes any actionable wrong."

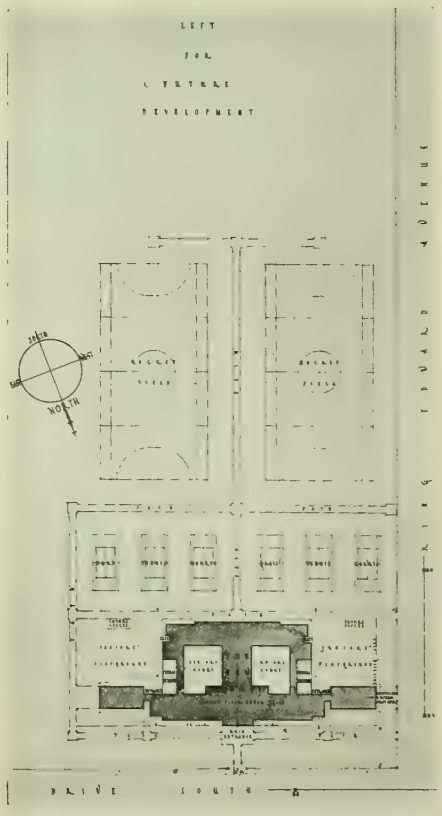
In clause 5, which relates to civil servants, an amendment was accepted, moved by the Government, which modifies sub-clause (2), which deals with the disqualification for offences: Disqualification shall not take place in the case of a first offence if within one month after warning the person shall cease to contravene the regulations.

In clause 6, sub-clause (4), which provides: "There shall be added to section 5 of the Conspiracy and Protection of Property Act, 1875, the following provision, that is to say, 'If any person employed by a local or other public authority wilfully breaks a contract of service with that authority, knowing or having reasonable cause to believe that the probable consequence of his doing so, either alone or in combination with others, will be to hinder or prevent the discharge of the functions of the authority . . .'" for the words "hinder or prevent the discharge of the functions of the authority" were substituted "cause injury or damage or grave inconvenience to the community."

In clause 8 and the definition of the word "strike," as we showed in our issue of July 22, in Committee, the words "or to accept employment" were omitted. We ventured to point out that the omission of these words might have serious consequences, and Lord Inchcape, on the Report stage, drew attention to the case of seamen, where the whole body might refuse employment and thus paralyse the export and import trade, and he moved the re-insertion of the words omitted. This was carried, but an appeal was made to the Lord Chancellor by Lord Reading to ascertain before the third reading whether the words could be inserted so as only to apply to the shipping industry, but no pledge was given on this point.

In our last notice we pointed out that a concerted refusal to accept employment might present all the features of a strike intended to coerce the Government, and we hope the words, now re-inserted, will be retained.

The Bill was passed in the House of Lords on the 25th ult. On the motion that the Bill be passed Lord Haldane moved an amendment that the words "or to accept employment" in the definition of a "strike" should be omitted, but the Lord Chancellor said that after careful consideration he was convinced that the words should be retained, and Lord Reading found himself in agreement with the Lord Chancellor, and the amendment was defeated.



STATUTORY EXAMINATION FOR DISTRICT SURVEYORS

In the early days of the Metropolitan Building Acts, the district surveyors who administered the Act were architects in private practice, and they continued to carry on their private practice while acting as district surveyors, the only restriction being that if they had a building in their own district the Metropolitan Board of Works appointed another district surveyor to superintend the work on that particular building. This custom worked satisfactorily for many years, and the Building Acts were administered by these district surveyors in a semi-judicial manner, and with sympathy in carrying out the spirit of the law with reasonable adjustment to meet the particular circumstances and not with a red-tape insistence on the letter of the Acts. The district surveyor who was also in private practice knew the difficulty of applying the Building Acts to particular problems, and was able to help the builder to meet them in a common-sense way.

The first change was when the London County Council required district surveyors to give up their private practice and depend wholly on the fees paid for their services. This was the first check to candidates coming forward for appointment, because the architect who throws up his practice loses his connection, and when he is called on to give up his district finds it very difficult to recover his clients. The policy of the London County Council appears to be in the direction of still further reducing the independent position of the district surveyor, and at present there is so much uncertainty about the terms of his office that architects having the necessary experience appear to be loath to give up their private practice for appointments under the London County Council.

The proposal of the London County Council to hold an examination of its own in addition to the examinations to be held as usual by the Royal Institute of British Architects in October next is to be regretted. The Institute examination, which has been carried on for many years, and which has resulted in passing excellent candidates for the important post of district surveyor, has recently attracted but few candidates to sit for the examinations. This is largely due to the uncertainty of the position of the district surveyor in the future. The setting up of another examination will not increase the number of candidates unless the standard of qualification for the new examination is very much reduced, and the effect on the Royal Institute examination cannot fail to be detrimental. The standard of the Institute's examination has necessarily been a high one, and especially in the *viva voce* examination the aim has been to pass candidates who had practical experience and who would apply that experience promptly and with discretion.

It is to be hoped that some means may be adopted to avoid lowering the standard of the examination and to make the terms of employment more attractive to the candidates and thus produce the increase in the number of candidates applying to be examined.

Lytham Girls' School Competition: First Premiated Design.

Messrs. Rees & Holt, FF.R.I.B.A., Architects.

THAMES BRIDGES

At a recent meeting of the L.C.C., in reply to an inquiry concerning the condition of Waterloo Bridge, Mr. Nigel Colman (the vice-chairman) said the report of the Royal Commission on Cross-River Traffic recorded the fact that, in addition to the serious subsidence which had taken place in pier No. 4, there had been, up to July, 1926, a settlement of approximately 11 in. and 7 in. respectively in the two adjacent piers, Nos. 3 and 5. Since 1926 further slight subsidences had occurred, but decidedly not to such extent as to give cause for apprehension at present or to necessitate the closing of the bridge. Waterloo Bridge was at present quite safe for public traffic in the way it was now used; the temporary supports were being efficiently maintained and the structure was under constant observation. No changes endangering the safe use of the bridge had been observed since the last statement in July, 1926.

Mr. J. D. Gilbert asked the chairman of the Improvements Committee whether the Committee could do anything to expedite a decision in the case of the Charing Cross inquiry, so that some practical steps might be taken with regard to Waterloo Bridge; what was the approximate annual cost of maintaining Waterloo Bridge in its present state; and whether, in the event of further collapse and expense, the Government would be responsible in view of the great delay in rebuilding caused by their action.

Mr. Colman replied that the investigations of the Advisory Committee on the Charing Cross scheme were proceeding, but their report could not be made for some months. The estimated cost of the maintenance of Waterloo Bridge during the current financial year was about £12,000.

The speaker informed Mr. J. D. Gilbert that the erection of a temporary bridge would be the first operation carried out in connection with the reconstruction of Lambeth Bridge. It was anticipated that a contract would be ready for letting the work towards the end of the present year. The temporary bridge would be sited up-stream from the present bridge; it was designed to carry foot traffic only, and would have five openings over the river. The central span would have a headroom about 21 ft. above Trinity high-water mark. It would not constitute a serious impediment to river traffic.

ART IN INDUSTRY

The Committee appointed by the Council of the British Institute of Industrial Art to inquire into the art training of middlemen, in a report just issued, state that it is of real social importance that the distributor should be equipped with knowledge, intelligence, and power of appreciation, so that encouragement may be given to a demand for better artistic products by the public, and to the supply of better products by manufacturers and craftsmen.

In their conclusions the committee consider that the successful development of art education of the kind contemplated depends essentially on the sympathetic encouragement given by heads of businesses or of departments, and especially on the facilities given by them for attendance of classes by persons in their employ, and on the offer of employment or promotion to those who have successfully completed their educational courses. The types of education provision required are:—Pre-employment schools, either full time or part time, for boys and girls of 14 to 16 who have left secondary or elementary schools; higher pre-employment classes for selected students who have passed through pre-employment schools and who intend to enter employment about the age of 18 or 18; part-time classes, either in the evening or where practicable in business hours, for the younger employees of distributive firms; and special lectures, organised visits to museums, exhibitions, etc.

The committee recommend their proposals to the local education authorities and representatives of distributive trades, and consider that the syllabus for the university teaching of art in relation to commerce, adopted by the University of London on the recommendation of the institute, is well suited to its special purpose and indicates the general principles to be aimed at.

BOOK REVIEW

Castles. By Sir Charles Oman, K.B.E.) (Published by the Great Western Railway. 5s. net.

This volume, *Castles*, a small quarto of excellent format, is the third of the series dealing with archæological features of the Western Shires, the other two giving as the "Abbeys" and "Cathedrals." It is a case of "good is not good enough, the best is not too good," when the great railway companies employ our academicians to draw their posters, and eminent scholars like Dr. James, the Provost of Eton, to write of the Abbeys, and Sir Charles Oman, Chichele Professor of Modern History in the University of Oxford, to compile a finely illustrated book on Castles. Draw a straight line, as the crow flies, from Paddington to Manchester, and we find on the western side of that line the area dealt with—the Western Counties and the whole of Wales. Needless to say, it is the country traversed by the Great Western Railway and the Castles are as far apart in size, importance, and distance as Royal Windsor, stately Warwick, and the small and oft-times ruinous strongholds of the Welsh Marches and such harbour defences as St. Mawes, over against Falmouth.

The book, as Sir Charles says in the preface, is the result of two most interesting journeys, devoted to castle-seeking, in 1924 and 1925 in Wales, the Welsh borders, Somerset, Devon, and Cornwall. The author was accompanied by his son, who carried a camera and utilised it to good purpose, seeing that he is responsible for 25 of the 107 plates reproduced from photographs. These illustrations could scarcely have been better chosen or more carefully reproduced. The coloured frontispiece, "A Siege of the 15th Century," is from a manuscript belonging to Edward IV, now in the Soane Museum. It would be interesting to know who is responsible for the 67 pen-and-ink sketches interspersed throughout the 230 pp. of interesting and informative text. *Castles* is a book which will go a long way towards popularising our Western Shires as home holiday haunts.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—Ed.

Lime for Plastering.

[Reply to "What Else," July 22.]

Sir,—"What Else" still appears to have missed the point raised in your issue of July 1 that mystified "Puzzled," who, having seen one part of *putty* lime added to *three* parts of sand, found on analysis that the resultant mortar contained *four* parts of sand to one of lime. "What Else" suggested that the only solution is that the putty lime must have been adulterated with sand before it was measured. "What Else" now tells us that the bulk or volume of sand and lime will be reduced by the addition of some water. This reduction in volume is only apparent but not real, as all that happens is that the addition of water enables the particles of lime and sand to pack closer. What the analyst found was the true content of sand and lime. He was not asked to find the proportions in which sand and *putty* lime were first mixed, and for his calculation he eliminated both water and air, and measured the components *free from voids*. Put another way, the only difference between a bucket of putty lime and a bucket of lime wash is that the putty contains very much less water than the wash. It is rather difficult to say where one begins and the other ends, but a rough distinction might be that a bucket of whitewash poured gently on a very slightly inclined plane would run away over the lower edge, whereas the putty would remain in the form of a soft cake whose height and diameter would depend on the *age* of the putty and consequent loss of water content.

"Puzzled" may rest assured that in this instance the analyst's result went to prove that the mixing was quite honest. If there was any failure it was not due to insufficient lime. J. R. T.

Difficulty of Measuring Sand.

Sir,—In considering the proportions of the various materials used and specified in concretes and mortars, unforeseen and curious results may afterwards crop up in analysis owing to the extraordinary behaviour of sand under varying conditions. Mr. B. Price Davies, in his book on estimating, makes the following observation:—"Sand, however, has other peculiarities. Wet sand is generally considered to be heavier per volume than dry sand. This is correct if water is run into dry sand and the sand is undisturbed. If disturbed, however, such as is the case when it is shovelled about for use, the moist sand is lighter per volume than dry sand. Experiments carried out by the author showed that sand containing 5 per cent. by weight of moisture contracted to three-quarters its volume when dried."

It will be readily seen from this how largely an analysis may vary with regard to mortars and concretes made under varying conditions as to weather, cover, and so on, quite apart from such questions methods of handling and measuring other constituents.

Ellesmere.

Artificial Stone.

Reply to "Chartered Surveyors" and "Builders," July 22.]

Sir,—If artificial stonework is measured in detail in a sensible manner it is, of course, the right way to deal with it in a bill of quantities, but I maintain that to measure it in the same way as stonework is not only the way to get a dear job but is actually misleading to the sub-contractors. With stone, one takes the cube of the stone needed to enclose the finished moulded stone, and then the beds and joints and sunk faces, etc., and labours generally are given as extras. This is quite right since this is the material required to produce the finished article and the labours necessary to achieve it. With artificial stone it is entirely different. The bulk of material is the actual amount of concrete needed to fill the moulds, and this, in the case of a column or cornice, is likely to be less than the cube of stone by perhaps as much as 25 per cent. Again, the labours are entirely different, the only process concerned being the making of the moulds, and the lining of exposed faces with the stone facing. In the case of a run of a hundred cornice stones, the labours in the case of masonry are the same for each. If it costs A pounds to make one stone, it costs 50A pounds to make fifty. But in the case of artificial stone it may cost A pounds to make a mould of one stone and fill it with concrete, but it will certainly not cost 50A pounds to make fifty, and still less in proportion each to make 100.

Owing to the different character of this class of work, I have hitherto made it a rule to get a firm quotation from the plans from the specialists and include it as a P.C. item. If I found this to be unsatisfactory or were called upon to measure the work I should certainly take out the quantities for the special wood moulds and give a nett cube of the concrete filling and a super area for the facing material. This can be the only fair way of arriving at the quantity value of the work. Surveyor.

English Oak.

[Reply to Restorer, July 22.]

Sir,—Your correspondent should specify the oak as to have been seasoned one year in the stick and one year in the plank. He need not be too much frightened at shakes, which are inevitable in English oak of large scantling. They do not affect the strength to a large degree except in very severe cases. In internal work where the character of the work renders the presence of shakes not to be permitted, Austrian oak should be specified, or failing that, Japanese. Timber.

Soft Woods.

[Reply to "Youngster," July 22.]

Sir,—Red wood should be specified for all carpentry work and soft wood joinery, unless good dry Columbian or Oregon be used for the latter. It is less subject to incipient dry rot than white and generally considerably stronger. Specification.

Patent Water Ejector.

Sir,—Can any of your readers give the name of the maker of an ejector for automatically emptying water from a wet cellar? I have heard of a "patent" operated from the water-supply pipe, but I cannot ascertain the maker's name. D.

Asbestos Scalloped Tiles.

[Reply to "Architect," July 29.]

Sir,—The tile with the corners taken off gives a rough effect of scalloping, and is supplied by practically all the manufacturers. The actual scalloped tile is now obtainable in sections of about half a dozen tile forms as the unit, and it makes a good roof and is pleasant in effect. Perhaps this may be what your correspondent requires.

Z.

Dampness in Floors.

Sir,—I should be glad of some information upon a point regarding an odorous dampness present in my house—a basementless one. I have tried ventilation in grating fashion from the front door through to the kitchen, and have also taken up some of the floors and laid down charcoal—all to no effect. Can you suggest any means for overcoming the smell? In addition, the damp has affected the walls of the rooms to the height of about 18 in. Is there a remedy for this? T. H.

Painting Stonework.

[Reply to "R. W.," July 29.]

Sir,—I should suggest a good quality oil-bound water paint as the best for the job contemplated. Distemper.

THE WEEK IN PARLIAMENT

The London Squares.

Captain Crookshank asked the Minister of Health whether he was able to announce the composition of the Royal Commission on London Squares, whose appointment he foreshadowed recently; whether he could announce the terms of reference; and, if so, whether the Commission would be able to inquire into the question of making arrangements for the opening of various squares and gardens in London to school-children during the months of August and September.

Mr. Chamberlain said that the terms of reference of the Royal Commission on London Squares were: "To inquire and report on the squares and similar open spaces existing in the area of the administrative County of London with special reference to the conditions on which they are held and used and the desirability of their preservation as open spaces and to recommend whether any or all of them should be permanently safeguarded against any use detrimental to their character as open spaces, and if so, by what means and on what terms and conditions."

It seemed to him doubtful whether a question such as that mentioned by Captain Crookshank would be within these terms of reference. The composition of the Commission was as follows:—The Most Hon. the Marquess of Londonderry (Chairman); Alderman C. H. Bird, Mr. Frank Briant, Dame Caroline Bridgeman, Sir George Duckworth, Sir Howard Frank, Mr. M. L. Gwyer, Mr. F. W. Hobbs, Alderman Sir Henry F. New, Mr. R. C. Norman, Councillor the Rev. A. G. Pritchard, Mr. B. Snell, Mr. Carmichael Thomas, Colonel K. P. Vaughan-Morgan; Secretary, Mr. I. F. Armer.

Rural Schemes.

Mr. Chamberlain informed Brig.-General Clifton Brown that schemes under the Housing (Rural Workers) Act submitted by 40 county councils and five rural district councils had so far been sanctioned. He had already approved applications in these cases covering upwards of 2,600 houses.

Municipal Rents.

Mr. Haslam asked the Minister of Health whether he was aware that many occupiers of houses owned by the municipality of Sheffield were in arrears with their rent, and that the County Borough Council of Sheffield were making large remissions of these arrears; and if he had received a report from his inspectors on the matter.

Mr. Chamberlain said he had no recent information as to the arrears of rents of tenants of houses erected by the Sheffield City Council beyond that reported in the Press. His Department was only directly concerned with rents of houses erected under the Housing Act of 1919. The last audited accounts furnished by the Council were for the year to March 31, 1926, and in those accounts the net rental income in respect of houses erected under the Housing Act of 1919 was shown as £52,530. The amount written off in the year as irrecoverable was £529, and the balance of rents uncollected at the end of the year was £2,792.

Mr. J. Hudson asked the Minister of Health whether he would state on what date he gave his approval to the Chester City Council's proposal to increase the rents of tenants of houses who take in lodgers; and when the proposed increase took effect.

Mr. Chamberlain said that the Chester City Council were informed on July 5 last that he raised no objection to their proposal. It was understood that their proposals would have effect from an early date in August.

Enclosure of Commons.

Mr. Guinness informed Mr. C. Wilson that since 1895 the Ministry of Agriculture had consented in 123 cases to the enclosure of commons or parts of commons; and in every instance notice of the proposed enclosure was given to the parish and district council except in one case of urgency affecting a small area in Wales.

THE BUILDING TRADE

BOUNDARIES, FENCES AND TREES—I.

Purchasers of real property very usually take a fancy to a particular site as suitable for the purposes to which they desire to put it; they regard the character of the land, the aspect it will provide for a house, the view to be obtained from it, and all those features which in their eyes make it appear a desirable possession, and having grasped those aspects they at once desire possession and rather prefer to turn a blind eye to what may prove obstacles in the way of purchase, and sometimes even resent the lawyer suggesting stringent inquiries. The desired site, in fact, is treated by them as the proverbial "gift horse," but even a gift horse may prove an undesirable and expensive acquisition, and a site is far more likely to prove a source of anxiety and the occasion of litigation unless proper precautions are taken at the time of purchase. We remember a well-known firm of lawyers advising a client not to contest certain water rights, as his stream might run wine instead of water as regards costs if litigation were embarked upon, and the same thing though to a less degree might be said in the case of disputed boundaries. It might be imagined that the very first thing a purchaser would desire to be informed about accurately would be the boundaries of the land he is buying, what they are, and in whose ownership they will be, the inclusion of trees, etc., but this is often not the case in practice.

In the conveyance of small plots on building estates there is a convenient practice of defining the boundaries and also stating which of them are conveyed to the purchaser—thus the estimated size of the plot is given, its four boundaries are described, and it is stated which of those boundaries pass to the purchaser; but in purchases of real property this is the exception and not the rule which is stated in Webster's Conditions of Sale (Third Edition) to be as follows: "With regard to the boundaries of property sold it is conceived that no duty is imposed upon the vendor to inform the purchaser whether a hedge or wall forming the boundary is on the vendor's land or his neighbour's land, or in their joint ownership, and that in the absence of any statement in the particulars or conditions and of any indication given by the appearance of the property, the purchaser is not entitled to assume that the hedge is on the land sold or the wall is part of the property sold."

The difficulty in treating in a very short series of articles on the law of boundaries and fences is that so many general principles of law are involved that it is hard, so to speak, to isolate the subject. It involves a consideration of the law of easements and questions of conveyancing and other points of law, but we have selected the above quotation to start from, as the words "in the absence of any statement in the particulars or conditions" serve at any rate in the first instance to eliminate some conveyancing points relating to misdescription. The description of the property may be given by measurements, in which case the words "more or less" are usually added; by the abuttal of the property on a road, a river, a stream, the sea shore, or other property, by reference to a plan, or by reference to its past or present occupation, and it is clear that the boundaries may be ascertained from one or all of these statements. If they disagree the one with the other, then questions may arise as to misdescription, but that is a branch of the subject we shall not deal with at present, as we are more or less confining our observations in these articles to the questions which may arise after purchase between adjoining owners as to the property of the boundaries or fences themselves.

It is clear that the extent of the property may be defined accurately in the conveyance by all or any of the above methods of description, and yet that the owner after purchase may have not the least idea as to whether he owns the boundaries thus indicated or whether they belong to the adjoining owner. In the absence of express information on the subject the ownership of the boundary fences will be determined by various inferences to which we shall refer in detail, but, as is shown from the above quotation, the appearance of the property at the time of purchase may lead to an action for misrepresentation and also suggest an inference not supported by fact. Thus in Denny *v.* Hancock (1870 6 Ch. 1) on the sale of a small residential estate, the plan exhibited showed the western side as bounded by a strip of ground covered with a mass of small trees and shrubs. The intending purchaser inspected the property with this plan in his hand and found on this western side these shrubs and three magnificent trees all bounded on the west by an iron fence. The plan represented in a conspicuous manner all the detached trees standing on the property, except those three trees none of them so large as the three trees in question, and he assumed that the iron fence, including the shrubs and these three trees would be the boundary of the property he was purchasing, and bid for the property. As a matter of fact, the fence stood upon glebe land which was not included in the sale, the real boundary being indicated by stumps which were concealed by the shrubs. This mistake was discovered before the purchase was completed and the purchaser declined to complete. In an action for specific performance it was held by the Court of Appeal that a purchaser inspecting the property with the plan would naturally conclude that the iron fence was the boundary, and there was nothing to put him on inquiry, and that in such a case the difference between the apparent and true boundaries ought to have been mentioned in the particulars, and specific performance of the contract could not be enforced. In this case, the contract not being completed, the purchaser had his remedy for misdescription, but we cite the case merely as showing the need for care in ascertaining the true boundaries.

Another case showing the danger of judging by appearances is Brewer *v.* Brown (1884 28 Ch. Div. 309). There in the particulars of sale of freehold property the garden was described as "enclosed by a rustic wall with tradesmen's side entrance": the wall did not form part of the property and the tradesmen's side entrance was used on sufferance. This was known to the vendor but not disclosed to the purchaser, and although the conditions of sale provided that mistakes or errors in the description should not annul the sale, but should be the subject of compensation, this was held not to be a case for compensation, and the purchaser was entitled to have the contract rescinded.

Assuming, however, that a purchaser has got the amount of land he expected with the boundaries which he understood to be the boundaries and the sale is completed, and he has taken possession and subsequently a dispute arises between him and an adjoining owner as to the ownership of a particular boundary, then the question arises how is this dispute as to ownership to be determined

Of course, the most conclusive evidence would be the deed of conveyance and, as we have said, in the case of small plots the deed often defines the ownership of the boundaries, but in other cases the only evidence may be derived from inference. The general rule that a fence belongs to the owner of the land upon which it stands, by itself, carries the matter but little further, leaving it still to be determined in whom the land is vested, either by reference to the measurements given in the conveyance or other evidence.

Let us first take the most ordinary case where there is a hedge with a ditch on one side; the presumption in law, apart from other evidence, is that the hedge belongs to the owner of the land in which the ditch is not (Guy *v.* West (1808, 2 Selw N.P. 1287)), but if there are two ditches, one on each side, then the ownership of the hedge must be ascertained by proving acts of ownership (Guy *v.* West (ubi sup.)), and the same rule appears to apply to a bank and a ditch as to a hedge, Vowles *v.* Miller (1810 Taunt 137). In this latter case it was, however, decided that it did not follow that the ownership of the ditch would be presumed to extend to the width of 8 ft. from the interior side of the bank—that is, allowing 4 ft. for the base of the bank and 4 ft. for the ditch—for proof of the ancient width of the ditch would be evidence that the ownership did not extend beyond the outer edge thereof.

It is not very often that these old decisions laying down general principles come before the Courts, but this question of the hedge and ditch was discussed comparatively recently by the Court of Appeal in Marshall *v.* Taylor (1895 1 Ch. 641). In that case the plaintiff and defendant were the owners of adjacent houses facing a road from Preston to Liverpool. Both houses were surrounded by gardens and before the year 1868 the two gardens were separated by a ditch running east and west with a high beech hedge on the south side. The house of the plaintiff's predecessor, in the title, was situated to the south of the hedge and the drainage of his house used to run into the ditch. About the year 1868 the plaintiff's predecessor had laid drain pipes in the ditch into which the drainage of both houses then ran, and he covered in the ditch. The plaintiff purchased his house in 1871, the property being described in the conveyance as "All that messuage and garden and land thereto belonging containing together 3 roods and 24 perches, including the hedge-row or fence on the north-west side of the said premises." His predecessor had been in the habit of cutting the hedge, and to do this on the north side he had stood in the ditch. The defendant came into possession of his house in 1875, and according to the measurement of the property in the purchase deed the ditch did not appear to be included, but ever since the ditch had been covered in, the surface had been within the yard and garden of the defendant's house and had been used by him as a pathway and for flower borders, and a fowl house had been erected upon it. The plaintiff continued to cut the hedge, and on two occasions had opened the ditch to clean the drain. He did this with the knowledge and acquiescence of the defendant, but from the evidence it was not clear whether previous permission had been obtained.

The plaintiff brought this action for a declaration that the land for a distance of 4 ft. from the hedge forming the site of the ditch was his, and for an injunction restraining the defendant from trespassing on that strip of land. The decision turned upon the fact that assuming the plaintiff to have owned the ditch at some time, he had since become dispossessed, the defendant having exercised acts of ownership a sufficient time to have acquired a title under the Statute of Limitations, but we refer to the case on account of certain observations made by the Court of Appeal. All the members of the Court expressed considerable doubt whether the presumption of the ownership of a ditch beyond a hedge arises where the ditch is a natural feature and not artificially made. Lord Halsbury on this part of the case said: "I think the inclination of my opinion would be, if I were compelled to arrive at a judgment upon it, that the plaintiff originally

possessed this piece of land, though perhaps I am more influenced by the exact coincidence of the measurements that I ought to be. . . I place no reliance at all upon any supposed presumption that arises from the position of the hedge and ditch; if it was a ditch. I entertain considerable doubt myself whether it was not a small grip formed by the lie of the land."

Lord Justice Lindley said: "Whether that ditch or drain, or whatever you call it, was artificial, or whether it was natural, no one knows. It did not run straight like a ditch cut for a drain, but it ran more or less meandering down, twisting about. . . I doubt very much whether the ordinary doctrine which we find laid down in the books is applicable to a case where you do not know that the ditch is artificial. When you do know that the ditch is artificial there is no difficulty in applying the rule that the ditch belongs to the hedge, and that the owner of the hedge is the owner of the ditch."

MODERN BATHROOM ACCOMMODATION IN HOTELS

Commenting upon Mr. Stanley Hamp's paper on this subject, read before the recent Hastings Congress of the Royal Sanitary Institute, and reported in our issue for July 22, Mr. Keith D. Young writes as follows:—

"The paper read by Mr. Stanley Hamp opens up a large, interesting, and important question. The planning and ventilation of water-closets and such rooms is a matter of vital importance not only in hotels and dwelling-houses but in hospitals. The law as it stands at present provides that every water-closet inside a building must abut upon an open space of not less than 100 square feet in area; and must be provided with a window of a certain minimum size, and a grating or other means of permanent ventilation. Mr. Hamp considers that when this regulation was made it was a valuable and necessary one. No doubt it was and is desirable that a water-closet should be provided with a window for purposes of light; but the obvious effect of opening the window must be, in the great majority of cases, to allow air to pass *through* the water-closet into the house.

"In the old days, when sanitary fittings were of the worst type, such an arrangement must have been at least a nuisance, and quite probably a danger to health. With the advent of scientific plumbing and improved sanitary fittings the element of danger has been largely eliminated. Still, it is not desirable that the interior of a house should be supplied with air which has to pass through a water-closet on its way in. If, therefore, a system can be devised by which the air from the water-closet can be drawn out into a shaft and discharged into the upper air away from all windows, the need for the external wall and the window opening into the 100 ft. square area vanishes.

"But Mr. Hamp makes no reference to the fact that in many hotels the by-law requiring each water-closet to have its own window is disregarded. In an hotel I know there is on the ground floor a group of water-closets, none of which has a window; the partitions are only about 7 ft. 6 in. high, and the closets are thus open to a large room fitted with lavatory basins and urinals, and lighted and ventilated by a lantern light in the ceiling. And this is a plan which has been adopted to my own knowledge in many hotels.

This is not, it may truly be said, an ideal arrangement: but if for the lantern light and its questionable efficiency as a ventilator there were substituted a carefully planned system of upcast shafts, provided with a sufficiently powerful fan or blower at the top, the question of ventilation would, I submit, be satisfactorily solved. Obviously such a system would want proper attention; but as the only part liable to break down would be the fan with its motor, it would surely be worth while to provide this in duplicate."

AUCTIONEERS' MEETING

The twenty-seventh annual provincial meeting of the Auctioneers' and Estate Agents' Institute of the United Kingdom was held at Torquay recently, being attended by a body of over 400 members and friends. In the course of his presidential address, Mr. Alfred J. Burrows said that in New York the problem of housing the business interests had been partly solved by the erection of the sky-scraper. The Americans argued that if the business area was one square mile, and the average height of the buildings 15 stories, by increasing it to 30 stories, the 640 acres became 1,280 acres. In London this plan was not practicable. The City could not extend eastward, where the tightly-packed population prevented it, and business firms did not like to move south of the River. The tendency therefore, was to extend to the west. Cavendish-square, ten years ago the home of the then Prime Minister, was already invaded by commerce. In St. James's-square about 50 per cent. of the houses were now devoted to business, as were many houses in Grosvenor-place, skirting the grounds of Buckingham Palace. Hanover-square had long been given over to offices and shops, and the infiltration was steadily increasing. Banks, insurance and shipping companies were all acquiring premises, and the head office of a world-famous tourist agency had migrated westwards. The hitherto sacred precincts of Park-lane now housed a building society, and big blocks of flats were being erected. Everywhere the process continued. How long would it be, asked the president, before further inroads were made on Manchester-square, Portman-square, and other squares? During the last 20 years there had been a great transference of the ownership of land in this country. Ten years ago we read daily reports of "England changing hands." Ancestral estates had been broken up and sold, mansions owned by members of the same family for centuries had been converted to institutional purposes. The causes, though well enough known, might be repeated, as they were still operative with almost undiminished severity. Chief of them all was the severe incidence of the death duties. Then came increased taxation rates and tithe, and higher cost of maintenance. The trend of legislation had been generally unfavourable to the landowner: he had been threatened with nationalisation and other projects savouring of confiscation, and his freedom of contract had been curtailed. The net return on the capital value of the estate was often less than one per cent. The combination of factors such as these had compelled landowners reluctantly to sell. The breaking up of estates was likely to continue, though at a slackened rate, as many of those most affected had already been sold. The Institute continued its sound and steady progress, said the President. Entrants to its ranks had not only to pass examinations of a practical character, but to carry on for a prescribed period professional work of a responsible nature before they could qualify for the higher grades of membership. The College of Estate Management, established by the Institute, and in the administration of which they had been joined by the Surveyors' Institution, the Land Agents' Society and the University of London, was carrying out with great efficiency its function of qualifying young men for entry to the profession. So great was its success that it had been found necessary to enlarge the buildings. The additional premises were to be formally opened by the Minister of Health. One temporary disappointment they had suffered—they had not secured their Royal Charter. But they had no intention whatever of abandoning the claim. By steadfastly pursuing the true objects of the Institute, the first of which was sound service to the community in general and to clients in particular, they would attain that solid eminence to which a Charter could not be refused.

COMPARISON OF PRICES OF BUILDING MATERIALS ON JULY 1st, 1927, WITH CURRENT PRICES.

SCIENCE AND BUILDING CONSTRUCTION

The Chairman of the Board of Architectural Education, Mr. H. M. Fletcher, F.R.I.B.A., presided at a conference, held at 9, Conduit-street, of representative teachers of building who were recently in London on a course arranged by the Board of Education. A paper was read by Dr. R. E. Stradling, Director of Building Research, Department of Scientific and Industrial Research, on the subject of "Instruction in the application of Science to Building Construction."

In commencing his lecture, Dr. Stradling said that in no industry was teaching more necessary than in building: yet there seemed to him to be a certain confusion of ideas as to what were the essentials. Therefore he proposed to summarise what he conceived to be the central idea round which courses of education for all branches of the building industry would have of necessity to be developed—namely, the basic study of the materials used. The subject on which he had been asked to speak was the instruction in the application of science to building construction, and perhaps it was advisable to draw attention to what was really meant when we spoke of science in that connection.

Science was an organised knowledge of nature. It had been found by experience both inside and outside the laboratory that certain actions were followed by certain results, and the scientific worker was merely one who believed that by a close study of the conditions under which certain processes take place, he could build up an organised scheme indicating the processes whereby nature works. We called the statement of a particular process a "natural law," and it was common experience (although we sometimes acted as though it were not) that if we did not work in harmony with those natural laws we were obliged to have failure.

Our industry was of the oldest. Its traditional knowledge and craftsmanship had grown and been developed by the erection of trial forms of construction and by ascertaining in this direct way whether they were suitable for their intended purpose. It was obvious that knowledge so accumulated was not quite what was meant by science. Science aimed at an *organised* knowledge of natural laws which in the end should show an inter-relationship between the various natural forces with which we were concerned. In the ultimate, real genius in architecture meant, he thought, the instinctive appreciation of the arrangement of materials so as to work with and not against the natural forces concerned. If this instinct was not inborn, it was necessary to undergo some course of training. In the old days this was accomplished through craft study, and possibly one of the reasons for the sense of masterly achievement conveyed by certain of our older buildings might be explained by the fact that the designer possessed craft knowledge; perhaps it was that the designer developed an intimate and sympathetic knowledge of his materials by every-day close contact with them.

The organisation of modern civilisation had made the acquirement of this knowledge impossible by the older methods of apprenticeship to a trade. The architect and the master builder alike were divorced from the long years of craft study which was the training of their predecessors. The requirements of more complicated buildings adapted for all kinds of specialised purposes, and the greater demand for economy, had made it necessary for the average architect to devote most of his energies to design which dealt essentially with the efficiency of a building, and unless he was going to be merely a diagram maker and rely on the builder to interpret his drawings in terms of building materials, he had himself to have such a real knowledge of the materials at his disposal that he could use them to the best advantage. This meant, of course, a knowledge of his materials which would enable him to be aware of the natural forces brought into play when he exposed them in any particular situation. The master builder, while not faced with the same problems as the architect, had equally difficult ones in that he was to organise, under modern conditions of civilisation, technical processes and technical labour to carry out the erection of a building. He had obviously to have a detailed knowledge of his materials and the possibilities of craft skill in addition to a commercial knowledge of no mean order. The craftsman obviously required a detailed knowledge of the materials of his own particular craft, and he could afford still to spend years in practical apprenticeship which was the tradition of the industry. Thus we were thrown back at the present day upon the hard fact that although for the controlling positions in the industry an apprenticeship might be desirable in each of the crafts in order to get a full knowledge of materials, yet such a training was not practicable in the average man's lifetime. An even more serious factor arose in that even if this were possible, the traditional craft knowledge in the industry had not been built up in such a way as to be easily adaptable to the changing conditions now confronting the industry. In the use of new materials, such as concrete, for example, there was no craft skill on which to fall back, and hence the vast amount of study which had been given to this material in recent years. Despite this study, however, we were still quite a long way from understanding all we wanted to know in order to build a perfect structure.

Assuming then that an appreciation of the properties of our materials was essential for sound work, it became a necessity that the training of all classes in the building industry should centre round this study. All such study of materials could be grouped under building science, which could be defined generally as the study of the groups of natural laws which had to be understood and complied with if sound construction was to result. At the Building Research Station this building science was classified under four headings:—(1) Efficiency of Building, (2) Weathering, (3) Materials, and (4) Structures. Under the first of these headings were included such matters as the warming and ventilating of buildings, the acoustical properties and other special requirements demanded by the human occupant of a finished structure. Under Weathering was included the study of all the problems affecting the resistance which materials exhibit towards the natural destructive agencies to which they were exposed over periods of time. Under Materials was included a detailed study of chemical and physical properties of the individual materials without which knowledge it was not possible to use the materials to their best advantage. Under Structures were studied the arrangements of the materials to resist certain forces due to loading, etc., which they were required to resist during the life of a building. Thus if this classification were applied to the drawing up of courses of instruction for all the various classes in the building industry, one would be inclined to say that the architect, in addition to (1), should have a sound knowledge of the other three sections, that builders should also have a general knowledge of all but especially (3) and (4), and the craftsman should have a specialised knowledge of the portions of (3) and (4) which particularly appertained to his craft. By the term "building science" he included, said the lecturer, a very wide range, and this had of necessity to be so, for we were engaged in studying natural forces as they existed and not as subdivided by some academic and purely artificial distinction. He could not emphasise too strongly how important he thought this was; in fact, he would go so far as to say that unless much more attention was paid to this scientific work in the training of entrants into the industry, we should get a much greater loss of efficiency than we had at present.

He felt this strongly, not only because of the industry as a whole, but also because of the craftsman in the industry. We had craftsmen of whose skill we were justly proud, and if we asked these men, as was really the condition of the industry, to develop a skill which only could be developed as a life study, and not to worry about the larger structural problems involved in building, then it behoved us to have as the controllers of our jobs men who had the knowledge necessary to prevent the serious accidents which so often occurred to the workers on buildings. We were organising the placing of materials to work in harmony with the laws which our very actions brought into play, and yet we were laying scarcely any emphasis upon the study of these very laws, but trusted in a very large measure to an accumulation of traditional knowledge built up often on unknown and occasionally unsound foundations, and only safely applicable in those very few cases where we were reproducing the exact conditions of the mediæval or earlier builder. We had no higher education in England for this class of work. Until university courses were in being and supported strongly by the industry, we were slipping back every day in our real technical knowledge. The technical schools could do a lot. It seemed to him that their special opportunities were to train the craftsmen and to provide the necessary facilities to allow the craftsman, if he so desired, to pass from the craftsman's rather narrow training to the broader one necessary for a leader in a section of the industry. That was to say, to provide "minor" courses, as they were sometimes called, for the craftsman, and "major" courses to which there should be an easy path from the "minor" ones, so that they should make it possible, as was at present the case in engineering, for a craftsman to fit himself for a controlling position. To look at the matter in this way was looking rather far ahead, since it assumed the existence of university courses as the normal training for the architect and builder. Of course university courses were in existence for the architect, but—if an outsider might be allowed to criticise—they were in his opinion often not sufficiently strong on the study of their fundamental subject-materials, that was to say, a knowledge of the very things with which they had to design. In conclusion, he would say that while all knew there was no university training for builders, we hoped that the Institute of Builders would not allow this condition of things to exist very much longer.

Town Planning.

The following progress in town planning in England and Wales during June is recorded by the Town-Planning Department of the Ministry of Health:—

Town-Planning Scheme submitted (Stage C).—Durham: Sunderland T.C.

Preliminary Statement approved (Stage BB).—Shropshire: Atcham R.D.C.

Preliminary Statements submitted (Stage B):—

Hertfordshire: Bushey and Watford Jt. Ctee.

Kent: Bromley R.D.C.

Lancashire: Southport T.C. (Nos. 1 and 2).

Lincolnshire: Mablethorpe and Sutton U.D.C.

Norfolk: Norwich T.C.

Yorkshire (West Riding): Bradford T.C. (No. 3); Tadcaster R.D.C.

Resolutions received (Stage A).

Hertfordshire: Bishop's Stortford U.D.C.; Hadham R.D.C. (Bishop's Stortford U.D.C.).

Lancashire: Adlington U.D.C.; Gt. Crosby U.D.C. (No. 3).

Middlesex: Hampton Wick U.D.C.

Sussex: Chailey R.D.C.

RATES OF WAGES IN THE BUILDING TRADE

[Every endeavour is made to ensure accuracy but we cannot be responsible for errors.]

	Masons	Brick-layers.	Car-penters Joiners	Plas-terers.	Slaters.	Plum-bers.	Pain-ters.	Lab-ourers.

NEW BUILDINGS IN LONDON

Chelsea.—CLEARANCE SCHEME.—The Chelsea Borough Council have approved a £50,000 slum clearance scheme for the World's End district.

Ealing.—HOUSES.—A large number of houses are about to be erected in various parts of Ealing as follows :—57 houses by Haymills, Ltd., in Corringway, and 51 by the same firm in Audley Road, 37 houses by Messrs. H. S. Smallwood and Co. in Locarno Road, and eight in Greenford Road, and 34 by Messrs. Clark and Co. in Windmill Lane.

Kensington.—EXTENSION.—The Kensington Borough Council have accepted an offer made through Sir Alfred J. Rice-Oxley by Mrs. Henry Perrin, of 23, Holland Villas Road, to build at her own expense two additional exhibition galleries, 30 ft. by 25 ft. each, at Leighton House. The galleries will be erected in accordance with plans prepared by Mr. Halsey Ricardo.

Millwall. — IMPROVEMENTS. — Sir Robert McAlpine and Sons have secured the contract for the second portion of the scheme of improvements to the West India and Millwall Docks. The work is for the Port of London Authority and is estimated to cost £700,000.

Richmond.—BRIDGE.—A new road and bridge in place of a level crossing in Manor Road, Richmond, is to be constructed at a cost of £64,370.

Stepney.—EXTENSION.—The sub-station at 27, Osborn Street, Whitechapel, E., is to be extended. The plans have been prepared by the Borough Engineer of the Stepney Borough Council, for whom the work is being carried out.

Victoria.—SHOPS.—The Southern Railway propose to erect on a triangular piece of the forecourt at Victoria Station three shops

West Ham.—OFFICES.—Messrs. A. E. Symes, of Carpenter's Road, Stratford, have secured the contract at £63,367, for the erection of offices, showrooms and workshops in Romford Road, for the West Ham Council.

The A.A.S.T.A. Tour to the Loire Valley.

This tour will take place from Saturday, September 3, 1927, to Sunday, September 11, 1927. The party will visit the tour centres in capitals, and tours will be arranged as follows :—To Tours, Blois, Orleans, and to Chartres.

New Books.

"Touring England by Road and By-way," by Mr. Sydney R. Jones, is announced for immediate publication by Messrs. Batsford. The country is quartered into divisions with specimen routes, and notes on scenery and historical associations. The book is illustrated by the author's sketches and from photographs. Uniform with this volume and from the same publishers comes a popular guide to the understanding of English mediæval buildings, by Dr. Charles W. Budden, entitled "English Gothic Churches, the Story of their Architecture."

Monumental Stone Report.

A report by the Joint Committee of the British Institute of Industrial Art and the National Association of Master Monumental Masons on British stones suitable for use in graveyard monuments has been issued by the Institute. The report states that the qualities of different local stones and the variations of climatic and atmospheric conditions in different parts of the country are such that it is not possible to draw up a list of stones which can be confidently recommended as suitable for use for all kinds of monuments in all districts. The committee recognise the necessity of continuing the study of the subject, and suggest that the committee should be kept in being for this object, to be convened from time to time as occasion may require.

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

Following is a list of abbreviations :—Borough Surveyor, B.S.; Borough Engineer, B.E.; District Surveyor, D.S.; Clerk, C.; Town Clerk, T.C.; County Engineer, C.E.; County Surveyor, C.S.; County Architect, C.A.; Surveyor, S.; Engineer, E.; Borough Architect, B.A.; Architect, A.

TORQUAY ARBITRATION CASE

The arbitrator in this matter, Mr. F. C. W. Stacey, F.I.A.S., quantity surveyor, has recently published his award in this arbitration. The case arose out of the building of a new wing, ballroom, etc., to the Palace Hotel, Torquay, for Mr. G. W. Hands, the proprietor, Mr. R. G. Spiller, contractor, of Taunton and Chard, obtaining the contract, amounting to £17,600, for the work. A dispute arose consequent upon the withholding of £1,000, retention moneys, and the disallowing of claims for extra works made by the contractor, amounting to £781 6s. 6d., and a claim for the payment of increased wages paid to the workmen amounting to £992. The proprietor counter-claimed £4,454 5s. 1d. for defective works and £1,100 damages for non-completion in the contract time.

After a lengthy hearing, which occupied eight days, at Torquay, and several sittings in London, at which Mr. Spiller was represented by Mr. William W. Dearle, F.S.I., M.I.Struct.E., F.I.A., quantity surveyor, of London, and Mr. Hands by Mr. Harry Geen and Mr. G. O. Slade, barristers-at-law, instructed by Messrs. Easterbrook, solicitors, of Torquay, the arbitrator has awarded the contractor £1,478 12s. 11d. in respect of the retention moneys and claims for extras. £992 for increased wages paid (stating a case in regard to the latter for appeal to the High Courts if desired), and £782 8s. 7d. for costs. In regard to Mr. Hands' counter-claims, the arbitrator has awarded £236 0s. 7d. in respect of defects, stating that the contractor had admitted, and was prepared to remedy, certain defects had the opportunity been afforded him. No damages were awarded in respect of delay in completion, but costs amounting to £50 11s. 6d., were allowed to Mr. Hands.

The contract form was that issued by the R.I.B.A. and agreed to by the London Master Builders' Association, and the counter-claim for damages for non-completion was founded upon clauses therein, and was for 44 weeks at £25 per week. It is understood that an appeal is being made to the High Court in connection with the award on the question of increase in wages.

Site of Merton Priory.

An appeal is being made to preserve as much as can be acquired of the site of Merton Priory, close to Merton Abbey railway station, near Wimbledon. The appeal follows the excavations during the past five or six years by Lieutenant-Colonel H. F. Bidder, of Ravensbury Manor, Mitcham, who discovered the site, the position of which had been completely lost for several centuries. On the southern portion of the church site lies Station-road, Merton, the railway and the buildings of Merton Abbey station, but the northern half from the Lady Chapel to the great west door is situated in open private ground belonging to Messrs. Corfield, Limited, and this ground, it is understood, can be acquired. Colonel Bidder has uncovered almost half of the church foundations, and from time to time portions of the other half have been found when excavations for various purposes had been undertaken.

Scots War Memorial.

The Scottish National War Memorial at Edinburgh Castle will be open to the public on Sundays, next Sunday included, pending the permanent decision of the Office of Works regarding Sunday opening.

On the Sunday following the formal opening of the Shrine by the Prince of Wales, the Memorial remained open to the public, and no fewer than 100,000 Edinburgh people and visitors took the opportunity to visit it.

The County Hall, Westminster.

At the L.C.C. meeting on July 26, the Establishment Committee reported that in view of the present commitments of the Council for housing and bridges, the present time was not opportune for preparing a scheme for the completion of the County Hall. Mr. W. Ray, speaking for the Municipal Reform Party, said they had to recognise that the burden of taxation and of rates weighed heavily upon industry and was responsible for the burden of unemployment. Therefore, they hesitated in recommending such an expenditure as the completion of the County Hall would involve.

Mr. Herbert Morrison, speaking for the Labour Party, said that Mr. Ray's speech showed that with the party he represented the status and dignity of the city in relation to other great cities in the world did not count for very much. He asked what the people from New York, Paris, Scandinavia, Rome, or Berlin thought of the municipality responsible for the government of London leaving the great municipal hall in the lop-sided condition it was in. It was a humiliating position for the city to be in.

An amendment in favour of the report going back for further consideration was rejected by 57 to 23, and the report of the Establishment Committee, with their recommendation, was adopted.

Lambeth Footbridge.

London County Council is to provide a temporary footbridge over the Thames for the use of pedestrians during the reconstruction of Lambeth Bridge. No details have yet been decided upon, and it will probably be some months before the work is begun.

THE SCOTTISH BUILDER

NEW BUILDINGS IN SCOTLAND

Giffnock.—BRIDGES.—The Commissioners have approved the preamble of the Provisional Order promoted by Renfrewshire County Council for powers to reconstruct and widen two road bridges near Giffnock known as the Giffnock Railway Bridges.

Glasgow.—EMPLOYMENT EXCHANGE.—The Government are trying to find a suitable site for the new unemployment exchange for Central Glasgow.

Glasgow.—PROVISIONAL ORDER.—The Bill to confirm the Glasgow Corporation Provisional Order, 1927, regarding the Finniestoun Bridge, has now passed both Houses of Parliament, and it awaits the Royal Assent.

Gorebridge. — HOUSES. — The Midlothian County Council has accepted estimates for the erection of 32 three-apartment and 20 two-apartment houses at Gorebridge.

Moffat. — EXTENSION. — The foundation stone of the new wing at the Cottage Hospital which Sir William Younger of Auchen Castle has gifted in memory of his late wife, has been laid. The wing is to comprise nurses' additional bedroom and dining-room accommodation, and three new bedrooms for patients.

American Scots' Memorial.

A large party of Americans are arriving on Sunday at Glasgow, on a special tour in connection with the American Memorial to men of Scottish origin who fell in the war, that is being erected in Princes Street, Edinburgh. The memorial is to be inaugurated on August 24.

Scottish Petrol Pumps.

The Lasswade District Committee of Midlothian County Council, at a meeting in Edinburgh, unanimously resolved that in future permission should not be given to erect petrol pumps on any public street, road, or footpath, or on ground dedicated to the use of the public.

Mr. Tom Scott, R.S.A.

We regret to announce that Mr. Tom Scott, the Scottish artist, has died in his native place, Selkirk. He was an honorary retired member of the Royal Scottish Academy. Born in 1854, he studied art in the Edinburgh schools, and in 1878 began exhibiting at the Academy, of which he was elected Associate in 1888 and full member in 1902. One of his best-known drawings was the "Border Moss-Troopers Returning from a Raid," which was exhibited on the Mound in 1886.

Dundee Esplanade Road.

The Commissioners appointed under the Private Legislation Procedure (Scotland) Act, 1899, continued their inquiry in Edinburgh into the Provisional Order promoted by the Corporation of Dundee, and found the preamble proved so far as it deals with the abandonment of the scheme for the construction of an esplanade road to Broughty Ferry.

Incorporation of Architects in Scotland.

The monthly meeting of the Council of the Incorporation of Architects in Scotland was held recently at 15, Rutland Square, Edinburgh, Mr. G. P. K. Young, F.R.I.B.A., the president, in the chair. One Associate and three students were elected members of the Incorporation. Sympathetic reference was made to the death of Mr. T. P. Marwick, F.R.I.B.A., who was president from 1922-24, while Mr. F. C. Mears, Edinburgh, and Mr. J. B. Nicol, Aberdeen, were congratulated on their election as Fellows of the R.I.B.A. It was resolved to donate a substantial grant towards the National Art Survey Drawings. Mr. Nicol Bruce, W.S., the secretary, intimated that seventeen candidates in all had taken part in the examinations held at the Incorporation chambers during July, under the auspices of the R.I.B.A. A further report was given to the progress made by the Association for the Preservation of Rural Scotland.

*These prices apply to *new buildings only*. They cover superintendence by foreman and carry a profit of 10 % on the prime cost without establishment charges. A percentage of 1¼ should be added for Employers' Liability and National Health and Unemployments Acts, and from 1s. 6d. per £100 for Fire Insurance. The whole of the information given on this page is copyright.

ANCIENT LIGHTS

Mandatory Injunction.

A case, Barnes *v.* Allen, is very briefly reported in the *Weekly Notes*, July 16, which raised a point on which it was stated no previous decided case could be found. The plaintiff was the owner and occupier of No. 10, Alexandra-road, Wisbech, and he had brought an action against the defendant for obstruction to his ancient lights, claiming, *inter alia*, a mandatory injunction. The defendant was the lessee of No. 11, Alexandra-road under a lease for ten years commencing November 8, 1923, and with the consent of his lessor, the freeholder, he had partially pulled down the old buildings and was erecting new buildings which, it was complained, obstructed the light to certain windows in the plaintiff's premises. This work had been carried on after protest by the plaintiff, and, in part, after the issue of the writ.

At the trial the Court came to the conclusion that the new buildings obstructed the ancient light to a window in the kitchen and two lights in a small lobby, but the question then arose whether a mandatory injunction should be granted in this action as against the defendant, who was only a lessee, the freeholder not having been made a party to the action. The Court held in these circumstances a mandatory injunction could not be granted. The buildings had been completed and they were the property of the lessor, the freeholder, and to grant an injunction in this case would infringe two plain principles. If an injunction were granted it would be to compel the defendant to pull down property belonging to the lessor, an order he could not comply with but rendering him liable to imprisonment if he did not comply with it.

The two principles were that a Court could not make an order against a defendant when failure to comply with it would involve his personal liberty unless the defendant was in a position to comply with it, and that no person not party to an action could be bound by an order in that action. The real owner was not a party to this action, and it was impossible to make a mandatory order in such circumstances. The Court therefore made an order declaring that the new erections caused a nuisance or illegal obstruction to the plaintiff's ancient lights and directed an inquiry as to damages.

In the course of the argument in this case it appears to have been contended that a mandatory injunction could be granted in such circumstances as no reported case could be found by the industry of counsel where an injunction had been refused on the above grounds. The learned Judge suggested that this absence of any decided case might be due to the fact that no one hitherto had had the courage to demand a mandatory injunction in such a case, but it appears that there may even be another reason for this absence of reported cases. In the *Weekly Notes* this case is starred, showing that it will not be reported in the Law Reports. Thus this point, though now definitely decided, will not be found in the Law Reports. It appears to us that, however obvious a point may appear, it is sometimes useful to report a case which may afford a guide to those concerned, and prevent obvious points being raised over and over again.

Flats, Wembley Hill Garden Suburb.

We regret that in connection with this work, illustrated in our issue for July 22, a mis-spelling occurred in the names of the builders, Messrs. Callow & Wright, Ltd., of 207, Brondesbury Park, N.W. 2.

Worshipful Company of Carpenters.

At the election held recently the following gentlemen were elected as Master and Wardens:—Mr. F. Adams Smith, F.R.I.B.A., Master; Mr. Walter Jacob, Senior Warden; Mr. Gayford D. Minn, Middle Warden; Mr. Charles A. Robertson, Junior Warden.

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXXIII. No. 4410. AUGUST 12, 1927.

THE CRASH IN CORNHILL

LATE on Saturday night there occurred in Cornhill an event that may have far-reaching effects upon architecture and building. A few minutes before midnight the western section of the great Commercial Union Insurance building, at 23, Cornhill, collapsed, almost as though cut off by a blunt knife, amidst thunderous roars. The seven-story high cascade of broken masonry fell into the fifty-foot deep excavation that has been made for the foundations of Lloyds Bank building—to be erected on 22, Cornhill—taking away two of the four uprights of the "Scotsman" derrick erected by the firm at work on Lloyds excavations.

There were no casualties. A slight subsidence of the foundations, accompanied by sounds of cracking that took place on Saturday afternoon, gave ample warning, and by the time that the section collapsed, there was not a soul near the building, and Cornhill, on both sides of the Commercial building had been roped off by the police. The Fire Brigade stood by in the event of fire breaking out, but nothing of this kind happened, the gas mains under Cornhill being apparently unharmed. Under the debris in the Lloyds excavated site are a great number of the insurance company's papers which, however, it is hoped to recover. For the present the remainder of the building has been evacuated, and the staff housed temporarily in Adelaide House. That is the present extent of the damage.

Official action has been prompt. A section of the building extending from the line of breakage to the western blocked-column of the main entrance has been pronounced a dangerous structure, and the face of this to Cornhill has been shored up with timber. All excavation in Lloyds premises has been stopped, and the derrick's leg shored up; in fact, all that it is humanly possible to do to prevent further falls and damage to other property has been done. There is, however, a certain anxiety amongst the officials connected with the matter. On Tuesday morning, Mr Gilbert Lovegrove, Dangerous Structures Surveyor to the City Corporation, asked in the Mansion House Police Court for formal summonses against the owners of 22, 23, 24 and 25, Cornhill for "failing to comply with the requirements of the notice given by the Mayor and Commonality and citizens on or about August 8, requiring you to take down the defective brick and stonework fronting Change-alley, and to take down or secure the overhanging undermined and unsupported walls below the pavement level." Mr. Lovegrove issued also a summons against the City Corporation itself —this summons being as a protective measure for the Surveyor. Order was made against the holders of property in Cornhill to make their property safe within ten days. In the course of evidence, however, Mr. J. A. Pugh, on behalf of the City Solicitor, made the following statement: "A large portion of the roadway projects from the Royal Exchange side of Cornhill to the opposite side with nothing underneath it except cables and mains which might at any moment drag it down." This statement is borne out by a large crack that at the moment of writing, is present in the roadway of Cornhill. Should this portion of roadway collapse, it would occasion the very gravest danger to other buildings in the vicinity; in especial, to the Royal Exchange. From inquiries, however, we find that the crack has not appreciably enlarged since its discovery on Sunday.

No official inquiry has yet been undertaken into the cause of the fall, but we understand that there is a possibility that one of the several underground streams in the City, perhaps a tributary of the Wallbrook, has been tapped during excavation work on Lloyds Bank premises, and that it was the water from this that caused the subsidence of the foundations of the Insurance building. Another theory put forward is that the constant drainage that is always going on in the City has carried out the clay of which the City subsoil is composed, thus weakening it. Another theory is associated with the danger ever present in the sinking of foundations for a new building.

The collapse has brought vividly home to us the danger and heavy risks borne by all concerned in building operations in great cities. Obviously the risks are gravest in the greatest centres of activity. As essential is it to be close to a particular market that the value of land in proximity thereto continually advances, and prices at one time considered exorbitant, may be readily paid a few years later. In the banking centre the paramount claims of money have led to land being especially coveted, and building sites in proximity to the Bank of England have become almost prohibitive. To get a return commensurate with the cost has naturally resulted in areas being utilised to an extent scarcely dreamed of until comparatively recent years. This has led to expansion upwards and downwards.

The ever increasing height of modern buildings has been more visible than the extension downwards. Subterreanean burrowing has its own problems and difficulties to overcome, often no doubt provocative of great anxiety. The varying nature of the subsoil, the number of antiquated structures often ill built from the first and thereafter the subject of repeated alterations in order to adapt them from domestic occupation to different businesses, all combine to make building in London truly one of the most complicated and difficult of trades. The traditions of our builders cannot be surpassed, and the few serious failures that have occurred is an indication of the foresight and care usually observed.

Building procedure is indeed carefully formulated and enunciated in the London Building Acts, which seem to have adequately fulfilled their purpose. Once the design for a building is approved, working drawings completed, and a contractor engaged, notice is given to the District Surveyor advising the commencement of operations. When a licence from the L.C.C. is necessary, application is made to the Superintending Architect. Party wall notices are served upon adjoining owners, surveyors appointed to determine respective responsibilities and rights, and awards made accordingly. These preparatory ordinances precede the commencement of operations. Before the demolition of any building is accomplished various steps and precautions become necessary, such as the erection of shores, and when underpinning is required the determination of the position of pier-holes and the order of excavation. Before any part is erected, the examination of the foundations becomes a careful study, and the information disclosed may necessitate considerable revision of plans. Architects, civil engineers, clerk of works, building contractors and their foremen confer together, and all that experience and foresight can require must be exercised to attain perfect stability.

How serious any weakness or defect may become is strikingly apparent. In this latest City disaster, the collapse of one part of a building has not only disorganised important businesses, but has threatened others, disturbed water, electric and gas mains, and temporarily dislocated traffic. It is possible that latent defects existed in the fabric of the building or that the operations which were in progress adjoining disturbed the foundations or otherwise affected the stability of the building. No doubt information will be forthcoming in due course. All of us will be interested to learn the cause, and every endeavour will be exercised to prevent a recurrence of such accidents, not only because of their gravity, but on account of their effect on future building enterprise. If the responsibility can be attributed to a particular defect in our current methods or a failure in organisation, this will surely be corrected.

Nothing but benefit can accrue from full and free discussion, not only by individuals and coteries in their own particular sanctuaries, but by the various organisations and professions concerned. We need not suggest that the whole process of building be reviewed in the light of this experience, because in a sense this will happen. We should like to hear that not only were the R.I.B.A., the Institution of Civil Engineers, the Institute of Builders, and the Clerks of Works Association individually or collectively ready to confer and decide not merely how to limit their liabilities but prepared to face the ever-growing responsibilities confronting them.

In these days of co-ordination and combines, the individual is to some extent submerged, and the organisations themselves may not yet have provided an equally efficient substitute. This is a matter that should be carefully examined. Requirements in the majority of buildings are of so special a nature, and modern developments so elaborate both as regards structure and equipment, that anything in the nature of mass production may conceivably be overdone. Here, we are not concerned with speculative builders in an unfrequented part of London, but with representative firms who might almost be regarded as public institutions, and with chosen individuals of eminence and distinction. We offer our sympathy to all those engaged and especially to the Commercial Union Assurance Company and their tenants who have been so suddenly deprived of house accommodation.

NOTES

Recognition of the Architect.

We are quite in sympathy with the view of our correspondent on p. 232 who thinks that consulting engineers and others deserve openly acknowledged credit for their work in connection with buildings. We have always maintained that due acknowledgment should be made of all the varying assisting factors in the production of a building work, but it must be borne in mind that the office of the architect is to bring together and correlate all the scientific and artistic work connected with a building. It is difficult, and indeed foolish, to apportion relative values to all the individual effort which goes to the making of a successful building. But the work as a whole when finished must be judged by the way in which the architect has combined and settled all the forces which make up the result. If he is worthy of the name, he has employed every available scientific and artistic aid which specialists and craftsmen can contribute. There is, as architects themselves well know, a danger that even the most accomplished craftsmanship may be too much in evidence, and it is even possible in these days of such extensive steel and concrete work that the specialists in these materials may take much from the success of the architect's vision. We see in the mission of the architect more, we think, that it is usually credited with. Do the public realise how many are the factors with which an architect has to deal? To begin with, he may be fortunate enough to secure a builder whose enlightened capacity is ever on the alert to assist the architect to get the best materials for economy and for artistic effect. There are buildings which owe so much to the way in which they are built that the architect feels a sense of indebtedness to the builder even after the last bill has been paid. There are cases where the individual ability of a clerk of works or a builder's foreman cannot be valued by the ordinary rate of payment. There are delightful items of detail and ornament which owe their value in a building not alone to the selection of their place by the architect or to his rough sketches for them, but to the high artistic merit they exhibit. Then the client himself may either be an item of the greatest assistance or a constant difficulty in unfair or unwise demands. We are not exaggerating the difficulties which a capable and sensitive architect encounters in much of his work, but he is probably the last to deny or belittle the efficient help he gets from others.

Stonehenge.

The subscription that is being raised to preserve Stonehenge comes at an opportune moment. Much of the impressiveness of this great monument depends upon its isolation and its effect against the sky-line, and it is now in imminent danger of desecration. If it became the centre of a hotch-potch of bungalows and tea-houses we should have added our greatest monument of antiquity to the long list of casualties among treasures of the past. The plan to purchase some 1,400 acres of the surrounding country is so obviously in the public interest that we have no doubt that the requisite money will be available. When the purchase is complete it is proposed to remove the unsightly structures that were erected in the immediate neighbourhood during the war.

English Architecture in Australia.

Our correspondence leads to the belief that the loan exhibition of British Architectural subjects sent to Australia has been highly appreciated by the profession there, and in one of the letters we have received the writer suggests that it would be well if we took all the opportunities possible to acquaint our brethren overseas with the best buildings which are being done in this country. The first international exhibition south of the Equator was held in Melbourne in June. The project was under the direction of the Royal Victorian Institute of Architects. A critic in the Melbourne *Herald* says that "the exhibition emphasises the aesthetic superiority of Great Britain: their work has its roots firmly in the ground of sound tradition, but is yet susceptible to innovations of a sane and enlightened land. The strained daring of the American and the Robot-like mechanism of the German schools do not show up well beside it. In the happiest way the great English traditions are used by the English architects. Their influence has moulded the genius of the faithful so as to enable it to meet and deal with changing demands and conditions, to increase and give further authenticity to the source from which it drew inspiration."

Lewes Castle.

The Chairman of the Council of the Sussex Archæological Society, in a letter to the Press, tells us that the East Sussex County Council has decided to purchase ground adjacent to Lewes Castle, within the ancient precincts, and on it to build an extension to its offices. The major portion of the Castle has, of course, long been devoted to the use and enjoyment of the public. Exact particulars do not appear to be available, but it is important that a proposal of this kind should be adequately ventilated in public and fully considered before it is put in hand. Many of the worst acts of vandalism of the past would have been avoided if public discussion had been possible. Lewes Castle is one of the finest in Sussex, and in the absence of further particulars it would seem undesirable to encroach at all upon its precincts.

Innovation.

This word is not one of the most encouraging character where architecture is concerned. In a city, or where there are other buildings to be considered, the architect cannot wisely disregard what is around him, for he builds not only for the site and his clients' requirements, but for the city and the society of which his building is to become a part. National characteristics in building, the traditions represented by the locality in which the new building is to

R.A. Exhibition, 1927.
Bronze Head: Mary, daughter of Mr. Wilfrid Yates.
Mr. W. C. H. King, Sculptor.

be erected call for some consideration. We have in mind a building in a principal thoroughfare of a great continental city, recently built by, we understand, an English architect for a commercial company, which in its form is not architecture but advertisement. No doubt the commercial company for which it was erected had this in view, but it is a pity when the high traditions of architecture yield themselves to commercial exploitation in this way. In the case of a picture, the vagaries of excessive individualism are at least confined within its frame, nor need we look at it unless so inclined. But a big building in a prominent thoroughfare is always with us, whether we will or no, and in this sense the responsibility of the architect is greater, so that we look to him for a restraint and appreciation governed by the nature of the demands his profession makes upon him.

A Notable Gift to the National Gallery.

Sir Joseph Duveen having generously offered to the Trustees of the National Gallery the choice of a picture from the recently purchased Benson Collection now on exhibition at Manchester, the Trustees, after careful consideration, have selected the famous painting of "Christ taking Leave of His Mother" by Correggio. This has long been recognised as the most attractive and interesting among all Correggio's early works. Here, under some exceptional stress of feeling, he blends all that he had learned from Venice and Ferrara and Padua, into a composition which in its strength, its gravity and its pathos recalls Rembrandt. In date the Correggio belongs to the epoch in which Titian painted our "Noli me Tangere." In tone and spirit there is much in common between these two pictures; indeed, the supreme importance and beauty of Sir Joseph Duveen's latest gift to the Gallery can perhaps be illustrated in no better way than by saying it is worthy to hang side by side with our famous Titian.

Study of Head from Life.
By Miss M. B. G. Hiley.

Boy and Ball. Statuette. Modelled from Life.
By Miss M. B. G. Hiley, Goldsmith's College Art School.

The Bath Bi-centenary.

The Bath Festival is a reminder that the year 1727 saw the inauguration of that great town-planning movement under which John Wood and his son, under the partonage of Allen, converted Bath from a squalid little provincial town into the dignified city that is now a place of pilgrimage. This energy and foresight of 200 years ago has raised Bath into the forefront of English towns. The beauty of Oxford and Cambridge lies in their individual buildings and more or less fortuitous grouping; Bath shows us the perfection of order and unity. The nineteenth century introduced but few discordant notes, since very little was then built, and one hopes that that newer pioneer, "the Bath Clause," may save our best-planned town from further defilement.

Dublin Horse Show.

The Royal Dublin Society, like the lawn tennis authorities at Wimbledon, has found that an outstandingly thriving institution cannot build fast enough for its needs. An immense new stand in reinforced concrete has been constructed and has not succeeded in noticeably easing the space available for spectators whose numbers continue to break all records. Besides building this new stand the Society has refaced its premises with smooth granite to the designs of Messrs. O'Callaghan & Webb. The show grounds that a few years ago appeared unnecessarily large are now taxed to their fullest capacity, and it is understood that a further covered stand, corresponding to the new one, is to be ready for next year. The general standard of design and the colour schemes of the stalls show a decided advance, among the best being the Imperial Chemicals exhibit.

The New and the Old.

Though we should welcome change when it is good, and not be compelled by hidebound experiences when we are moving through uncharted seas and towards unknown destinations, it is not a bad thing to have the experience of the past as pilot in our voyaging. And this is sometimes forgotten in the art of painting. Painting is much more than a craft; it is an interpretation of life and nature. And when it leaves its nearness and dependence on these in pursuit of an absolute, from which their restraint and inspiration are absent, it tends to flounder in excessive individualism and subjectiveness, however well intended. We may sympathise with the desire to realise new conceptions, but the old ones have still much to tell us in helping us to achieve them, and the wholesale rejection of the past is not the way to it. In all our seeking it is best to keep our feet firmly on the ground, and some of our young painters have their heads in the clouds.

Study of Head on Greek Lines.
By Miss M. B. G. Hiley.

GENERAL NEWS

Professional Announcements.

Messrs. Dixon and Quick, architects and surveyors, have removed from 25, High Street, Guildford, and will in future carry on the practice at 180, High Street, Guildford.

Mr. Arthur F. Usher, F.R.I.B.A., and Mr. Joseph Hill, F.R.I.B.A., partners in the firm of Messrs. Yetts, Sturdy & Usher, have removed their offices from 115, Moorgate, E.C.2, to 34, Gordon-square, W.C.1. Telephone: Museum 0467.

An Appointment.

We understand that Mr. John C. Dalton, A.M.I.E.E., Parliamentary barrister, has accepted a commercial post with the County of London Electricity Supply Company, Ltd., and its associated companies. Mr. Dalton, who was engaged on the drafting of the new Electricity Act, is the author of standard text-books on the law relating to electricity.

Whitechapel Hay Market.

In a few days Whitechapel High-street will lose the Hay Market, which has obstructed traffic in the eastern main road to and from the city. To extinguish the market an Act of Parliament was required, and under it the London County Council have paid about £17,000 to the holders of the market rights.

Excavations in Athens.

By authority of the Cabinet permission has been granted to the American School of Archæology in Athens to carry out excavations on the site of ancient Athens. The conditions provide for the sectional expropriation of the buildings on the site within five years. The first section to be expropriated contains 25 buildings. Professor Capps, the Director of the School, has left for the United States to raise the necessary funds and hopes to return here in October.

R.I.B.A. Statutory Examinations.

The R.I.B.A. Statutory Examinations for the office of District Surveyor under the London Building Acts, or Building Surveyor under Local Authorities, will be held at the R.I.B.A., London, on October 19, 20, and 21, 1927. Applications for admission to the Examinations, accompanied by the fee of £3 3s., must be received at the R.I.B.A. not later than Monday, October 3, 1927. Full particulars of the Examinations and application forms can be obtained from the Secretary R.I.B.A.

Surveyors and Auctioneers at Cricket.

The annual cricket match between the Surveyors' Institution and the Auctioneers' and Estate Agents' Institute, played on July 26, resulted in a win for the Surveyors by 108 runs, the Surveyors scoring 312 and the Auctioneers 204. Top scorers for the Surveyors were A. B. Poole (95), J. W. Hodson (70), and J. D. P. Wheatley (52); and for the Auctioneers, G. L. Olliff (55), A. V. Daborn (30), and M. S. Rogers (26).

Bronze Statue, American Scottish Memorial.

Mr. R. Tait Mackenzie, Sculptor.

Garden Cities and Town-Planning Association.

The Autumn Tour of this Association will this year be to the North of England and Scotland, the cities to be visited being Newcastle, Edinburgh, Glasgow and Carlisle. The tour begins on Friday, September 16, and ends on Friday, September 23. Copies of the detailed programme may be obtained on application to the Secretary, Garden Cities and Town-Planning Association, 3, Gray's Inn-place, London, W.C.1.

Discoveries at Richborough Castle.

As a result of investigations on the site of Richborough Castle, Kent, archæologists have reached the conclusion that the blocks in the form of a cross, which have hitherto been a subject of debate, were really the foundation of a marble-cased structure forming one of the great triumphal arches which the Romans were wont to erect as memorials of victory. It is considered likely that they erected such an arch in the last century to commemorate the Claudian invasion of 43 A.D.

COMPETITION NEWS

Municipal Buildings, etc., Wimbledon.

This competition, of which we have received a copy of the conditions and instructions to architects, is for a Town Hall and Municipal Buildings to be erected on the site of the existing Council Offices in Broadway and Queen's-road. The accommodation required includes the following:—Council Suite; Town Clerk's Department; Borough Surveyor's Department; Borough Treasurer's Department; Valuation Department; Electrical Engineer's Department; Public Health Department; Basement; Miscellaneous; Caretaker's Quarters; Public Assembly Hall, with seating accommodation for at least 1,500 persons, including a gallery. An expenditure of £120,000 is contemplated, and the competitor's estimate should provide for completing the buildings ready for occupation, including the cost of boundary walls, pavings, etc., but excluding movable furniture and fittings. Competitors' questions must be addressed to Mr. H. Emerson Smith, Town Clerk, 12, Queen's-road, Wimbledon, on or before August 16. Mr. H. V. Ashley, F.R.I.B.A., is the assessor.

Henley-road Municipal Cemetery Chapel, Reading.

The assessor's awards in this competition are as follows:—

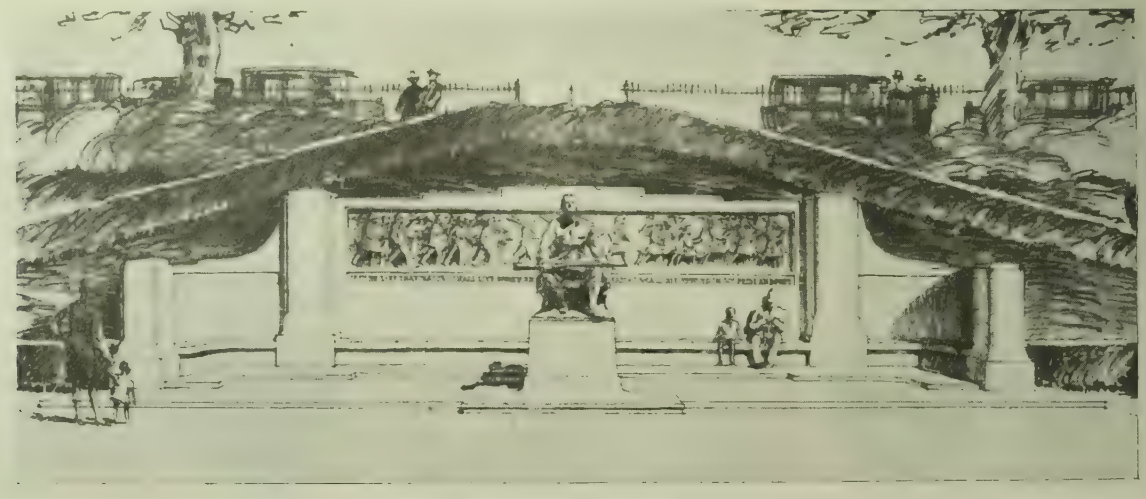
1st: Mr. G. Berkeley Wills, F.R.I.B.A., 7, Stone-buildings, Lincoln's Inn, London, W.C.

2nd: Mr. Horace L. Creak, 52, West View-terrace, Caversham, Reading, and Mr. A. H. Powell, A.R.I.B.A., 35, Circuit-lane, Reading.

We illustrate both these designs this week.

Elementary School, Rotherham.

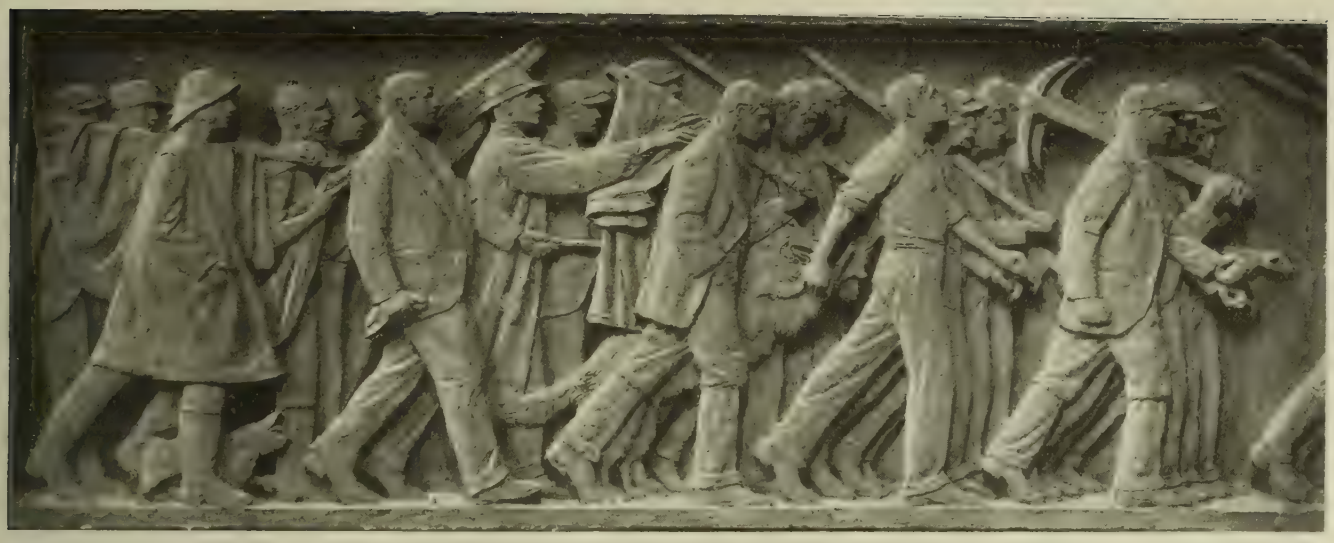
The awards in this competition are as follows:—



1st: Mr. James Totty, Rotherham.

2nd: Mr. David B. Jenkinson, A.R.I.B.A., Rotherham.

The exhibition of designs, which has been held at the School of Art, Rotherham, during the past week, closes to-morrow (Saturday). We illustrate both designs in this issue.



Swimming Bath, Woking.

Woking U.D.C. proposes to erect a covered swimming bath, to be used during the winter months for concerts, etc., and with a range of slipper baths attached. Applications are invited from chartered architects for the preparation of plans and estimates. Applications, accompanied, if possible, by references to similar work, should be forwarded to Mr. R. Mossop, Clerk, Council Offices, Woking, not later than August 31.

American Memorial to Scottish Soldiers who fell in the War, Princes Street, Edinburgh.

Mr. R. Tait Mackenzie, Sculptor.

The Recruits.

The Recruiting Party.

"The Pipes."

American Memorial to Scottish Soldiers who fell in the War, Princes Street, Edinburgh.

Mr. R. Tait Mackenzie, Sculptor.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly a possible.]

Exemption from R.I.B.A. Examinations.

Sir,—I notice in your issue of August 5 a list of additional Schools of Architecture at which attendance at the three- or five-years' course can secure exemption from the Intermediate Examination of the Institute. Is it any wonder that opponents of the Registration Bill should be able to find very strong support when they read of the extension of this policy? What it comes to is that if one's parents are sufficiently well-to-do to keep one at a School of Architecture, the fag and expense, as well as the terrors and uncertainties, of the examinations may be avoided, but if economic circumstances forbid this, there is no escape. Surely this is class legislation with a vengeance, and if I were a Labour M.P. I should certainly point out its unfairness.

Supporters of the R.I.B.A. policy have been emphasising that it is merit alone that secures new admissions, but this extended list of exemptions does not justify that contention. If "duds" are to be kept out and membership of the profession is to carry a guarantee of efficiency, the only practical way is to make everybody pass the same test. And if any exemption is to be made, surely it should be in favour of those humbler but gifted members of the community who, in spite of financial difficulties, manage at Polytechnics, and so on, to give expression to their native genius and to train it to the service of the arts.

X. Y. Z.

Professor W. R. Lethaby.

Sir,—Many will have been pleased to see Mr. William Davidson's letter in *The Builder* of July 29. On the wider aspect of questions that relate to building, including the right development and use of towns and cities, Professor Lethaby's position is unique, and his work as a builder, writer, or teacher—always unobtrusively pursued—claims and receives the allegiance of the by no means inconsiderable number whom his rare qualities attract. Mr. Davidson refers to some of Professor Lethaby's writings that have appeared recently, and been read with interest and pleasure, in your journal. Might I add a mention of the fascinating series of notes on the life and work of Philip Webb, which place on record a view of the practice of architecture that—applicable or not to average present-day conditions—show a conception of an architect's aims and purpose hardly possible to be read without advantage to students of the art of building. And has not the time arrived when all the various occasional writings and addresses of Professor Lethaby should (with his aid and permission) be collected together and put in permanent and readily accessible form for the enlightenment of the architect and layman of the future?

Fredk. R. Hiorns.

The League of Nations Competition.

Sir,—The paragraph in *The Builder* of May 13, relating to the League of Nations Competition, Geneva, makes specially interesting reading in face of the fact that the jury of assessors was composed of nine members. All competitors keenly await that jury's report, which promises, from what you indicate, to be of exceptional moment to the profession. Meanwhile, my conception of the probable position is that each of the nine jurymen were so strong-minded, nationally and otherwise, and so partial to his choice as to what designs were entitled to first, second, and third place respectively, that there became an absolute deadlock. No one being prepared to yield to the opinion of another, the result to my mind—problematically, of course—was the number twenty-seven. If these thus became automatically possessors of special merit, the further inference that I draw is that the nine recommended to receive prizes (not premiums) is the sum total of the firsts, each of which solely attained that position by the individual judgment of the respective assessors.

Thus as a competitor I find (and I trust others will) a good degree of comfort in readily believing that not one of the twenty-seven designs is the outcome of any united process of judgment; and, furthermore, that there are grounds for concluding that the ablest design submitted will be found to be one that did not make any arresting appeal in any national idealism, and so absolutely escaped any combined or any relative examination. Personally, my mentality is such that I cannot conceive that out of so large a number of competitors being engaged upon so fascinating a subject under so ideal conditions of competition, especially in the direction of planning and placing of the structure upon the site, allied with a worthy approach both landwards and lakewards, that more than one did not produce a design commensurate with the dignified purposes of the League.

William Lucas, F.R.G.S.

East Melbourne,
Australia,
July 4, 1927.

[The designs awarded premiums of 12,000 francs each were published in our issues for July 29 and August 5, a criticism of the competition by Mr. S. W. Milburn, F.R.I.B.A., appearing in the latter issue.]

"The Recognition of the Architect."

Sir,—Referring to your note on the above subject in your issue of July 22, and your further note in your issue of August 5, commenting on a letter which you publish in the same issue, one is inclined to agree with your correspondent that the architect has too long enjoyed the monopoly of recognition. With the increasing complexity of modern building the architect must face the fact that he is only one of a team, and it is this fact which the lay Press are apparently beginning to grasp. This was clearly shown in a recent report in the lay Press of the opening of an important building. I quote from memory, but it was to this effect: "Where many have co-operated it would be invidious to bestow praise upon any in particular."

The time is surely ripe for the architect to retire to the safe ground of planning and æsthetics, and to limit his claim to recognition to the services he actually performs. Foremost amongst those he does not perform is structural design, and yet, far from honour being given only where it is due, it is still quite common to find, in the case of a factory constructed entirely of reinforced concrete for instance, that the architect alone receives recognition, although as a fact the structural design has been delegated to some specialist firm who would consent to have their designing charges hidden in the contract price.

The keynote of the design of modern buildings is collaboration, and it is to this fact that the public needs educating—the fact that a great number of specialists in design are employed, of whom the architect is only one. When this is recognised, and all who collaborate are paid openly instead of in the present hole-and-corner way, the lay Press will be in a better position to know where honour is due, and it is safe to say that the architect will not get it all, either in the abstract or in the concrete.

Gower B. R. Pimm.

*** See Note on page 228.—Ed.

Statutory Examination for District Surveyors.

Sir,—I am sorry to say I cannot agree with the view expressed in your article upon this subject on page 212 of your issue of August 5, that the viva voce examination held by the Royal Institute should of necessity be a high one. As an old campaigner, both as an examinee and an examiner for technical examinations, it has been my personal experience that I have always been more successful as an examinee in examinations where there has been no viva voce examination and where the questions for both the written and graphic examinations have been set in the proper manner and upon the syllabus of the examination, the marks obtained by the candidates being accessible to them after the examination, together with their position on the list, and the questions papers later published as a guide to future candidates.

As an examiner my experience is that the personal element counts too greatly in the viva voce examination. If a candidate is personally known to the examiner, either as a past pupil or assistant, he is naturally interested in the candidate. I have even known an examiner to send word to a particular examinee that he has passed the examination during the course of the viva voce.

"Ex-Exam."

R.I.B.A.

THE EXAMINATIONS, JULY, 1927.

The Final Examination.

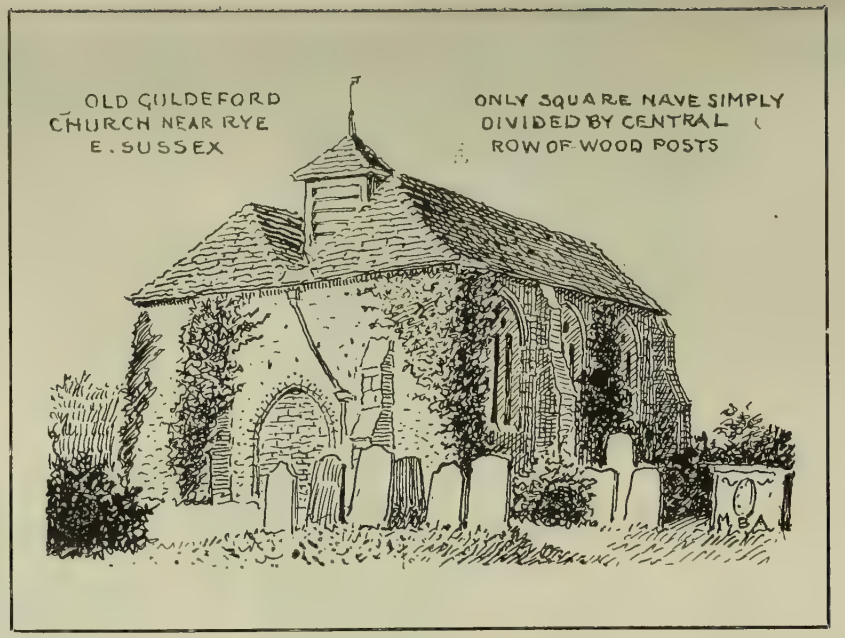
The Final Examination qualifying for candidature as Associate R.I.B.A. was held in London and Edinburgh from July 6 to 14. Of the 47 candidates examined (four of whom took Part 1 only and two Part 2 only), 18 passed (two in Part 1 only and two in Part 2 only), and 29 were relegated. The successful candidates are as follows:—P. W. Birkett, M. B. Blackshaw, J. R. Boyd-Barrett, D. T. Edwards (Part 1 only), I. U. Englefield, T. McK. Galbraith, A. E. J. Goodall (Part 2 only), G. E. S. Hereward, Osborne Howard-Leicester, V. C. Hunt, J. I. King, J. G. Laskie (distinction in Thesis), H. R. Parkin, Frank Scarlett, B. S. Tempest (distinction in Thesis), W. L. Ward (Part 2 only), Clifford Wild (Part 1 only), H. T. Wykes.

The Special Examination.

The Special Examination qualifying for candidature as Associate R.I.B.A. was held in London from July 6 to 12. Of the 21 candidates examined (three of whom took Part 1 only and one Part 2 only), seven passed (one Part 1 only and one Part 2 only), and 14 were relegated. The successful candidates are as follows:—C. B. Austin, J. H. M. Bates, C. G. G. Bennett (Part 1 only), R. A. Fitton (Part 2 only), W. T. Powell, H. A. Rees, S. E. Urwin.

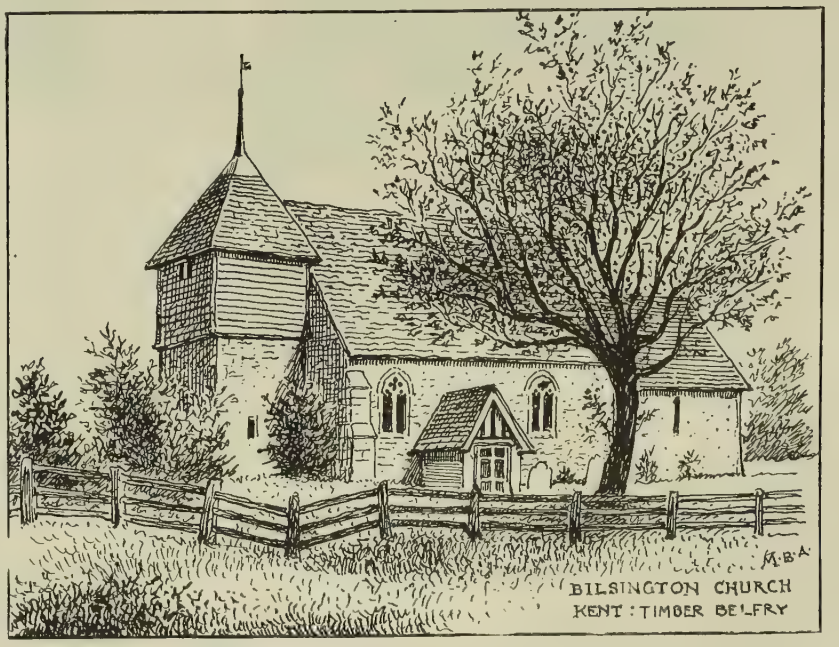
The Examination in Professional Practice for Students of Schools of Architecture recognised for exemption from the R.I.B.A. Final Examination.

The Examination was held in London and Edinburgh on July 12 and 14. Of the 42 candidates examined, 38 passed and four were relegated. The successful candidates are as follows:—E. B. Alexander, E. C. P. Allen, Arthur Aspland, Angus Brodie, G. A. Burnett, A. C. Cotton, E. F. Davies, W. H. G. Dobie, James Drummond, Francis Durward, H. B. Evans, G. A. Goldstraw, G. A. V. Hall, R. G. Heal, H. E. Hill, E. M. B. Hughes, P. S. Leask, K. R. Mackenzie, G. N. Mackintosh, John Maclennan, Patrick McNeil, W. H. McNicol, R. P. Morris, E. S. L. North, G. A. Ridge, Alfred Sinclair, D. A. G. Smith, R. M. Smith, H. B. Stout, B. A. Sumner, E. G. Tapsell, F. O. Templeton, R. M. Tinker, T. S. S. Worthington, W. A. Wood, Alan Woodrow, F. R. Wylie, J. F. Wyness.



The Special Examination in Design for former Members of the Society of Architects.

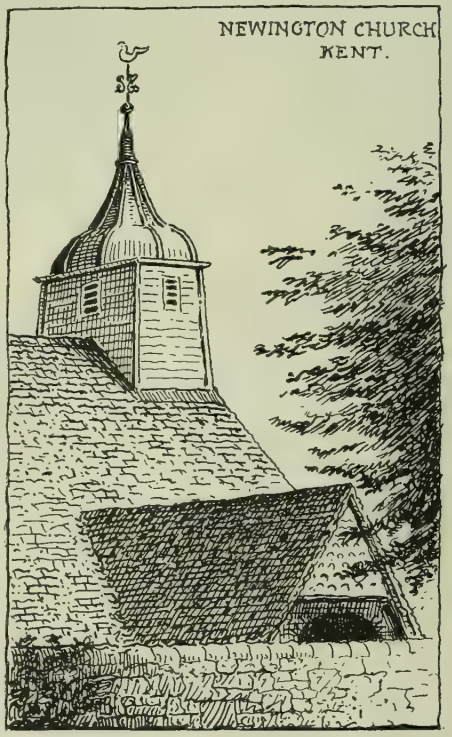
The Special Examination in Design for former Members of the Society of Architects to qualify for the Associateship R.I.B.A. was held in London from July 6 to 11. One candidate was examined and passed. The successful candidate is C. H. Baker.



R.I.B.A. Examinations, May and July, 1927.

The questions set at the Intermediate, Final, and Special Examinations held in May and July, 1927, have been published, and are on sale at the Royal Institute, price 1s. 6d. (exclusive of postage).

Four sketches by Mr. Maurice B. Adams, F.R.I.B.A., (Retired).

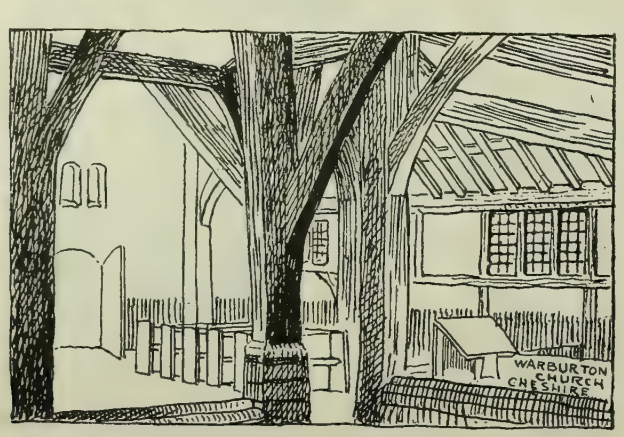


SOME TIMBER CHURCHES, TOWERS AND BELFRIES

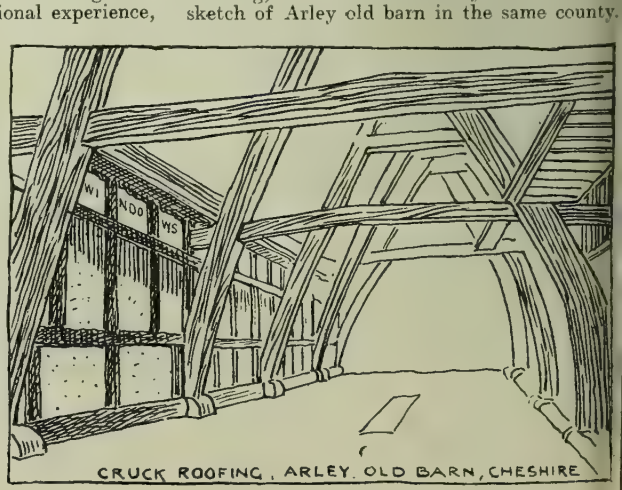
Mr. E. Guy Dawber, A.R.A., in his first Presidential Address at the Institute two years ago, struck the right note in regard to the preservation of the beauties of Rural England. The campaign thus initiated, materialised some time ago in the formation of a National Council. The Executive Committee is thoroughly representative, and we are assured that no effort will be spared to further the objects in view. The success of the movement is guaranteed by the co-operation of the Ministry of Health, under the influential lead of the Right Hon. Neville Chamberlain. The unanimous concord of the Press augurs well at the outset of this enterprise, which assuredly is of the utmost consequence. It will be wise, however, to remember how proverbially lethargic the public is apt to be in all such affairs; therefore, no avenue of approach must be neglected by those who appreciate and love the charms of the countryside.

Readers of *The Builder* well understand the details of this problem; therefore we need not attempt any recapitulations of the difficulties arising from the housing question. The complexity of the situation is due to the continuous enlargement of transport pressure, with more and more motor services, besides holiday traffic, to say nothing of additional omnibus routes in all directions. The amenities of the landscape are being spoiled, too, by the drastic changes to facilitate locomotion, often occasioning serious mutilation of picturesque old-world buildings along the highway or at corners of cross-roads. The monstrous defilements, prominently conspicuous on the outskirts of most country towns and villages, are due to repair garages and motor-spirit depots with unsightly advertisements. The parking of automobiles also violates the reposeful delight of many out-of-the-way hamlets or spoils the charm of jolly market-places, which are obstructed as rendezvous for char-à-bancs bringing sight-seers and mess-making trippers to places of historic interest like Bodiam and Arundel Castles in Sussex, or in the main streets of Battle, where the open space in front of the beautiful Abbey Gatehouse in summertime is seen devoted to coconut cockshies for the amusement of holiday-makers, brought from seaside towns for miles round.

These happenings, no doubt, are partly inevitable, though none the less destructive of beauty and general enjoyment of Rural England. Wanton damage has to be submitted to by transmogrifying the curtilage of some good old Georgian house hitherto giving distinction to a village street, entirely changing the aspect of the vicinity to augment, it may be, the profits of some rank outsider bent on profiteering, regardless of the neighbourhood and native families. The familiar and famous old garden, with its choice shrubs, is wrecked to provide a garage yard accommodating mercantile lorries and a varied crowd of motors. In not a few provincial towns, and among the suburbs of big cities, baneful incidents of like kind have caused serious depreciation, without any chance of remedy. We have personally experienced the reality of the matter, as, no doubt, many of our readers have.



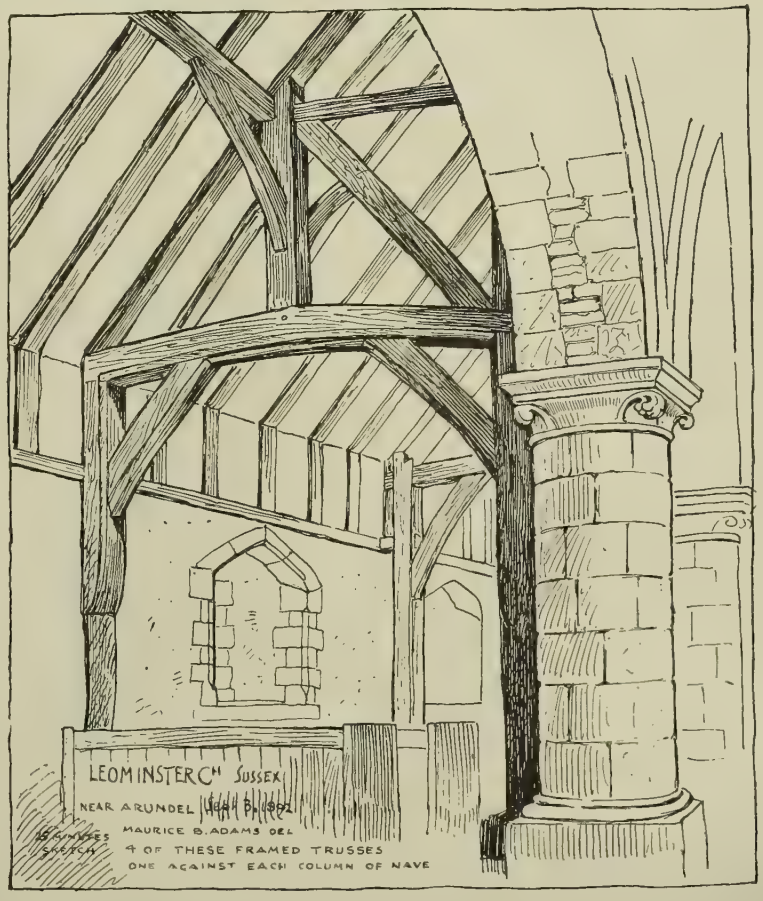
These circumstances combine to make the outlook very perplexing. Meanwhile, we



endure the menace of continual industrial unrest and repeated strikes organised to reduce the normal output of labour to a minimum standard, irrespective of efficient craftsmanship or cost in the building trade. Machinery and railways changed the outlook, which is being mistakenly hampered by uneconomic ideas about capital and remunerative values. Mr. Walter R. Sickert, A.R.A., assured readers of his letter issued a short while ago, that "we are privileged to live in the age of steel and concrete." When these historic houses and churches were built, reinforced construction was not invented, stability of tenure gave them a durable charm. Old homesteads were conceived on restrained, picturesque lines, modestly distinguished by local character, due to the use of indigenous materials handled with traditional experience, ensuring harmonious colouring, inspired by human touch so delightfully spontaneous, and devoid of effort. The houses harmonised with their environments. Barns, outhouses and tenements seem to have settled themselves, rising reasonably on their sites. The cottages, yeomen's houses, the parsonage and the manor house clustered around the church. As a matter of course, that dominated the village group, enriching the beauty of the hillside or a well-wooded valley, or set among some pines on the sweeping downland or moor. To understand the gradual growth of parochial well-being under ecclesiastical parentage it is necessary to remember the importance of every parish church, the building of which furnished continuous work among all classes. The extraordinary efficiency of craftsmanship during the hard times of the Middle Ages, and later on, is manifested by our splendid cathedrals and big churches, exhibiting far finer workmanship and design than commonly obtainable to-day. This appears more wonderful when we realise the terrible disasters suffered by our ancestors, such as the famous black death. Dr. Jessop records that during two centuries no less than nineteen religious houses in Norfolk and Suffolk alone were left without prior or abbot from this one cause. The records of the Leet Courts show how furious and frequent were the quarrels among the rustics, suffering many things, without roads for intercommunication, also without any sanitation.

The Church with its festivals, Rogation days, and great holy days, made life tolerable, and work was relieved by mystery plays and provision of Church hospitalities, with their Easter cakes, cyder, and ales. The relationship of old parish buildings with the layman's home was intimate, associated or co-ordinated by some architectural semblance of style or natural contrast in every hamlet. No direct allusions have been made in the propaganda issued by the Council elected for the Preservation of Rural England to the equal need of preserving old churches as well as old dwellings. The accompanying sketches have been chosen to demonstrate the relationship thus mentioned. Our selection intentionally concerns churches of the less ambitious kind, erected where the population was sparse and funds were correspondingly small or masonry difficult to obtain. Weather boarding and timber construction both in houses and churches in such places satisfied the conditions of things. The charm of these little wooden structures has been frequently overlooked by the casual student of buildings.

In considering timber churches, Greenstead's pre-Conquest example is the oldest in England, but the elementary use of halved logs set vertically in a frame forming the aisle wall is an archæological instance, and our immediate suggestions concern later examples. Not many churches constructed with wooden piers and arches still remain. Warburton, Cheshire, of which a sketch diagram is here reproduced, is simple and typical of Cruck building, further shown by the interior sketch of Arley old barn in the same county.

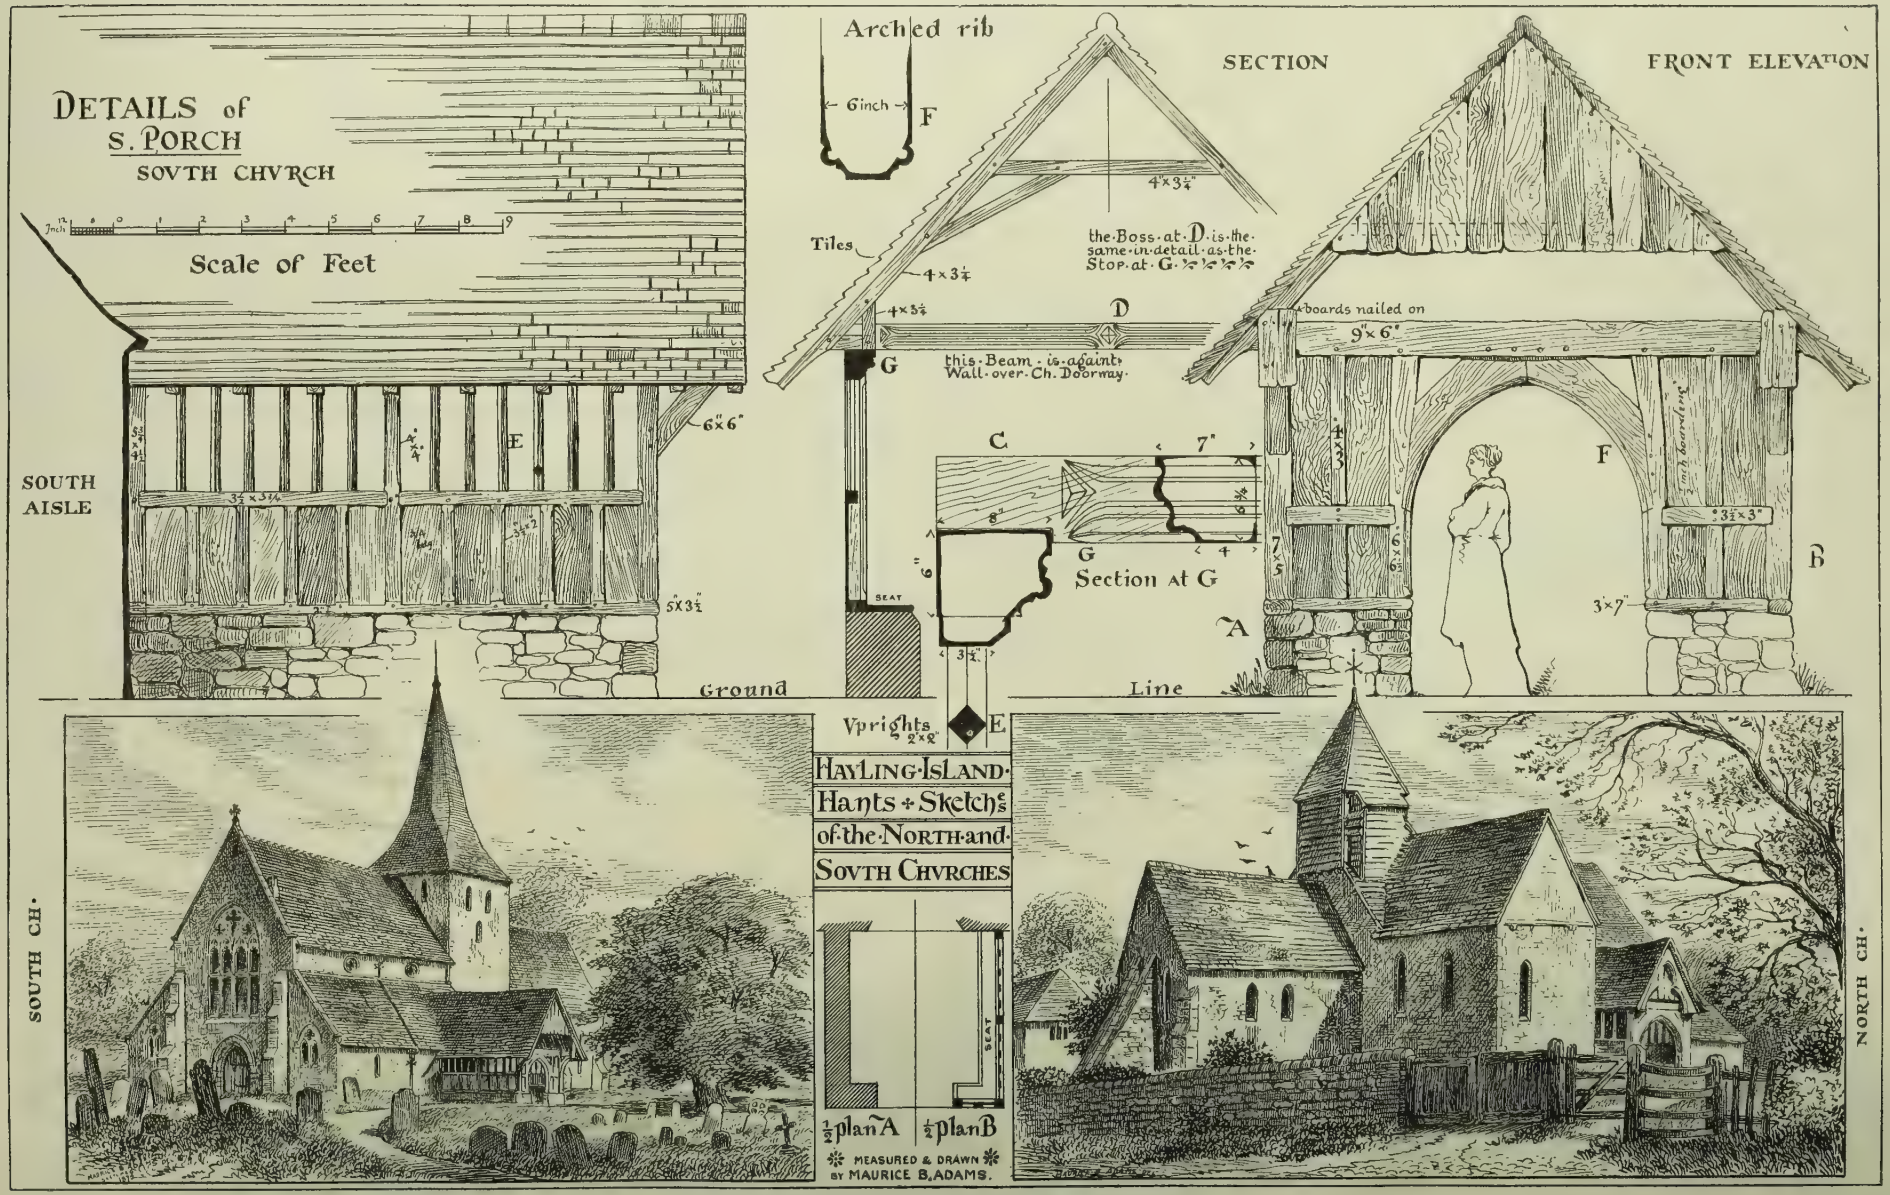


The side aisle of Leominster Church, near Arundel, figured below, is also an excellent and rare instance of timber framing introduced to support the long continuous unbroken slope of the tiled roof spanning nave and aisles. The uprights are spaced uniformly with the piers

Perivale Church, Middlesex.

of the arcade. Old Guldeford Church, near Rye, in Sussex, of which a sketch is given, has a square nave divided by a row of posts. Lower Peover exhibits half timber frankly used post and rail fashion with raking struts. The tower is of masonry and the nave arcade piers are of stone, but the arches and roof principals are frankly the arcuated construction of stone building. Marton Church, in the same district of Cheshire, is herewith figured by a S.W. view showing its broached spire set on a weather-boarded belfry rising above a western extension, also of wood framing giving a sort of narthex aisle. Siddington Church, in, the same locality, has a timber chancel and west end with a bellcote over the apex of its gable. Warburton Church, externally, is far less important with its stone-built little west tower. Claverley Church, Shropshire, has a fifteenth-century timber belfry, and half timber work is used at Besford Church, Worcester, as well as at Whittington, the latter church being included in the famous painting by B. W. Leader, R.A., under the title of "An April Day," exhibited in 1887. In woodland districts timber spires are common features, but the conical belfry tower, at Brookland, not far from Lydd, on Romney Marsh, sixteen miles from Hythe, is quite remarkable. Adjacent to Bramfield Church, Suffolk, is a circular flint-built campanile used in the same way as that at Lydd, so is worth alluding to. Between Bolsington and Lympne, Kent, a lead-capped close-boarded little bellcote is somewhat similar to that at Newington hard by Horncliffe, seen by our drawing. Its spire and ogee shaped finish is quite uncommon and very picturesque. Bilsington Church sketched herewith has its belfry of weather-boarding set square projecting boldly with a pin tiled spire at the west end. The photograph by Mr. Maurice S. R. Adams, accompanying these notes, illustrates a completed western tower entirely boarded in like manner at Perivale, near Ealing, overlooking the valley of the Brent. The central tower-like belfry of North Hayling Church Hampshire is included among our sketches because it is different from the others. The building has, since this view was taken, been restored, but its interest as an example of sophisticated timber turret work of the period is worthy of attention. The broached spire and timber belfry set well beyond the western gable gives much dignity to the small church of Woodham Walter in Essex. This effect is also obtained in the smallest church in Somerset, at Culbone, which is reached across the moor within easy distance of Porlock and Ashley Combe. The western spire is very simple, but it dignifies the diminutive church, which has a nave only measuring 30 ft. by 12 ft. Our old English church builders were masters of their craft, so accomplished that they managed to give scale to their smallest efforts.

No better example in point could perhaps be furnished than the exceptionally fine timber porch of South Hayling Church represented in the accompanying sketch. It has weathered well, there being no elaborate details liable to perish. An additional interest is attached to this sheet of Hampshire churches, because it was hung on the line at the Royal Academy the year it was made, although Mr. Maurice B. Adams had received a refusal card regretting its exclusion from that season's exhibition. This cannot be a common experience.



RENT AND MORTGAGE INTEREST RESTRICTION ACTS

In view of the fact that the provisions of Part I. of the Act of 1923 are due to expire in December next, the Council of the Auctioneers' and Estate Agents' Institute has issued a memorandum on the question which has been submitted to the Minister of Health and the members of the House of Commons.

While realising the necessity for the introduction of the Rent Acts, says the memorandum, it is the experience of the members of the Institute—indeed it may be said to be common knowledge—that their existence on the Statute Book has given rise to widespread and continued abuses which will only be entirely remedied by the removal of this emergency legislation. Amongst those abuses, the more flagrant are the deliberate evasion of the payment of rent, damage and waste to the premises, and profiteering by subletting. The Council is of opinion that the Housing situation to-day no longer justifies the continuance of the Acts in their present form, and it is further of opinion that in the interests of the whole community this emergency legislation should be removed from the Statute Book at the earliest possible date.

If, however, His Majesty's Government is of opinion that it is expedient to continue the operation of this legislation for a further period, the Council begs to suggest that such amendments be made as will (1) provide drastic remedies for the abuses which have arisen, and (2) make an early commencement in the removal of control, by stages similar to those adopted in its introduction, the first reduction in rental control being made in December, 1927, the next in December, 1928, and the control finally being removed in December, 1929.

North and South Churches, Hayling Island.

Reigate County School for Girls.

The new Reigate County School for Girls, which has been erected on the Reigate Lodge Estate, with the provision of a spacious playing field, was recently opened by the President of the Board of Education (Earl Percy). The estimated cost of the buildings is £35,000. The school is designed for 358 girls. The classrooms, which occur on both floors, and all of which have a southerly aspect, have the following accommodation:—three rooms arranged for 30 scholars; eight rooms for 25 scholars; two rooms for 24 scholars; one room for 20 scholars. The girls' entrances are arranged at the ends of the building, and at each entrance is found sanitary accommodation in a separate wing, and immediately inside the main building the cloak rooms. A central entrance is arranged, giving direct access to the large assembly hall. On the ground floor, in addition to the classrooms, there is a cookery room, dining room and kitchen, a headmistress's and assistant mistress's rooms, waiting-room, and medical inspection room. On the first floor at the west end are the chemical and physical laboratories, with a preparation room and dark room. The art room is arranged at the east end, and with a northerly aspect, and there is also on this floor a library and music rooms.

The building is constructed, generally, of red brick with brick dressings. The centre part of the south elevation projects, and is treated in stone and Atlas white cement. The main hall on the north side is brick, with stone cornices and dressing, and the north elevation is further varied by two gables of white cement. The roof is tiled. The building is fireproof, the floors being constructed of concrete and iron. The floors of the rooms generally, and the central hall, are laid with wood-block flooring, and the corridors have terrazzo floors and dadoes.

Messrs. A. Wickham Jarvis, A.R.I.B.A., and Frank A. Richards, M.A., F.R.I.B.A. (Architects for the Surrey Education Committee), are the architects, and the builders are Messrs. Taylor & Son, of Epsom.

Chapel of the Convent of the Sisters of Charity, Foxford, Ireland.

Nearly forty-five years ago a Convent of the Sisters of Charity was founded at Foxford, Co. Mayo, for the purpose of establishing, in this remote district, an industry that would provide some source of much-needed employment. The project prospered, and there is now a large woollen mill, equipped with the latest machinery, and engaging a couple of hundred men and women in the manufacture of woollens. Until lately, all the spare resources of the religious community were devoted to practical and reproductive building, but recently it was decided to build a chapel. Although stone is abundant in most parts of Ireland, including this district, the cost of dressing it, and the gradual disappearance of skilled masons, as well as other skilled tradesmen, from the country districts, coupled with the existence of abundant supplies of the best kinds of sand and gravel, suggested the use of concrete, of which the new chapel has been built. No attempt has been made to attenuate the walls, etc., to the ordinary dimensions of concrete or ferro-concrete construction, the old principle of thick walls having been adhered to; the climate is very wet, so that thick walls are desirable.

The architectural style adopted is based on the late Irish Gothic, freely rendered. It is the most distinctive phase of Irish mediæval architecture, possessing a marked individuality of its own, of which the absence of cusping is a feature. Concrete is, moreover, a material that especially lends itself to the constructive requirements of this particular sort of window tracery. In addition, there are many old Cistercian, Augustinian, Franciscan, and other foundations of the period referred to in the county and immediate neighbourhood, and these seemed to suggest a motif. The general walling is of mass concrete faced with specially selected Pontoon lake pebble dashing and the tracery and dressings of pre-cast concrete.

The plan consists of choir, chancel, cloisters, and two sacristies connected by communicating cloisters. The chapel departs from the usual conventual plan in that transepts are provided for the accommodation of a lay congregation comprised of the employees of the mills. The exterior is plain, but the interior has been well fitted. Most of the windows are filled with stained glass of a high artistic standard, from the studios of Miss Sarah Purser, R.H.A., Dublin (Mr. A. E. Child being the principal artist engaged). The high altar and side altars are of white statuary and various coloured marbles. The reredos is of Beerstone carved in the mediæval fashion in traceried and canopied niches filled with statues of various saints. The door of the tabernacle is of cast bronze enamelled and gilded, the work of Mr. Oswald Reeves, R.H.A., of the Metropolitan School of Art, Dublin. The floors are of ceramic mosaic designed by the architect, and executed by Messrs. Maw and Co., Salop. Prof. R. M. Butler, F.R.I.B.A., of Dublin, is the architect.

Morecambe Bathing Pool.

The accommodation provided in this bathing-pool comprises :—

(1) A large centrally placed bathing pool with a general water area, exclusive of the circular ends, of 330 feet by 112 feet. It is designed to include a championship swimming course 110 yards in length, 20 yards in width and from 3½ yards to 6 feet in depth, and a central space has been allocated for water-polo matches, and a large spectators' gallery faces the pool. There is in addition adequate provision for ordinary bathers and also for exhibition diving displays.

(2) Slipper, medicated, Turkish and Russian baths are planned in self-contained suites round the semi-circular east and west extremities of the central bathing pool.

(3) Dressing-room accommodation for 119 bathers of either sex is provided at the level of the side walk of the bathing pool adjoining the sides of the central administrative department of the south block of buildings

(4) Placed at the level of the side walks of the bathing pool, from which it is accessible, is the administrative block, and the establishment laundry adjoins.

(5) The café is placed at the promenade level and is easily accessible from the promenades.

(6) The Kursaal consists of a well-lighted hall connected with an adjoining open-air lounge.

(7) The outer promenade, intended for the use of the public, is so arranged as to prevent people using it from overlooking the pool.

The whole of the buildings adjoining the bathing pool are to be executed in ferro concrete (white Portland cement) and the central dome and verandah and other roofs other than flats are to have an external covering of lead.

Messrs. A. W. S. and K. M. B. Cross and Messrs. Sutton and Son are the joint architects.

[The awards in this competition were given in our last issue.]

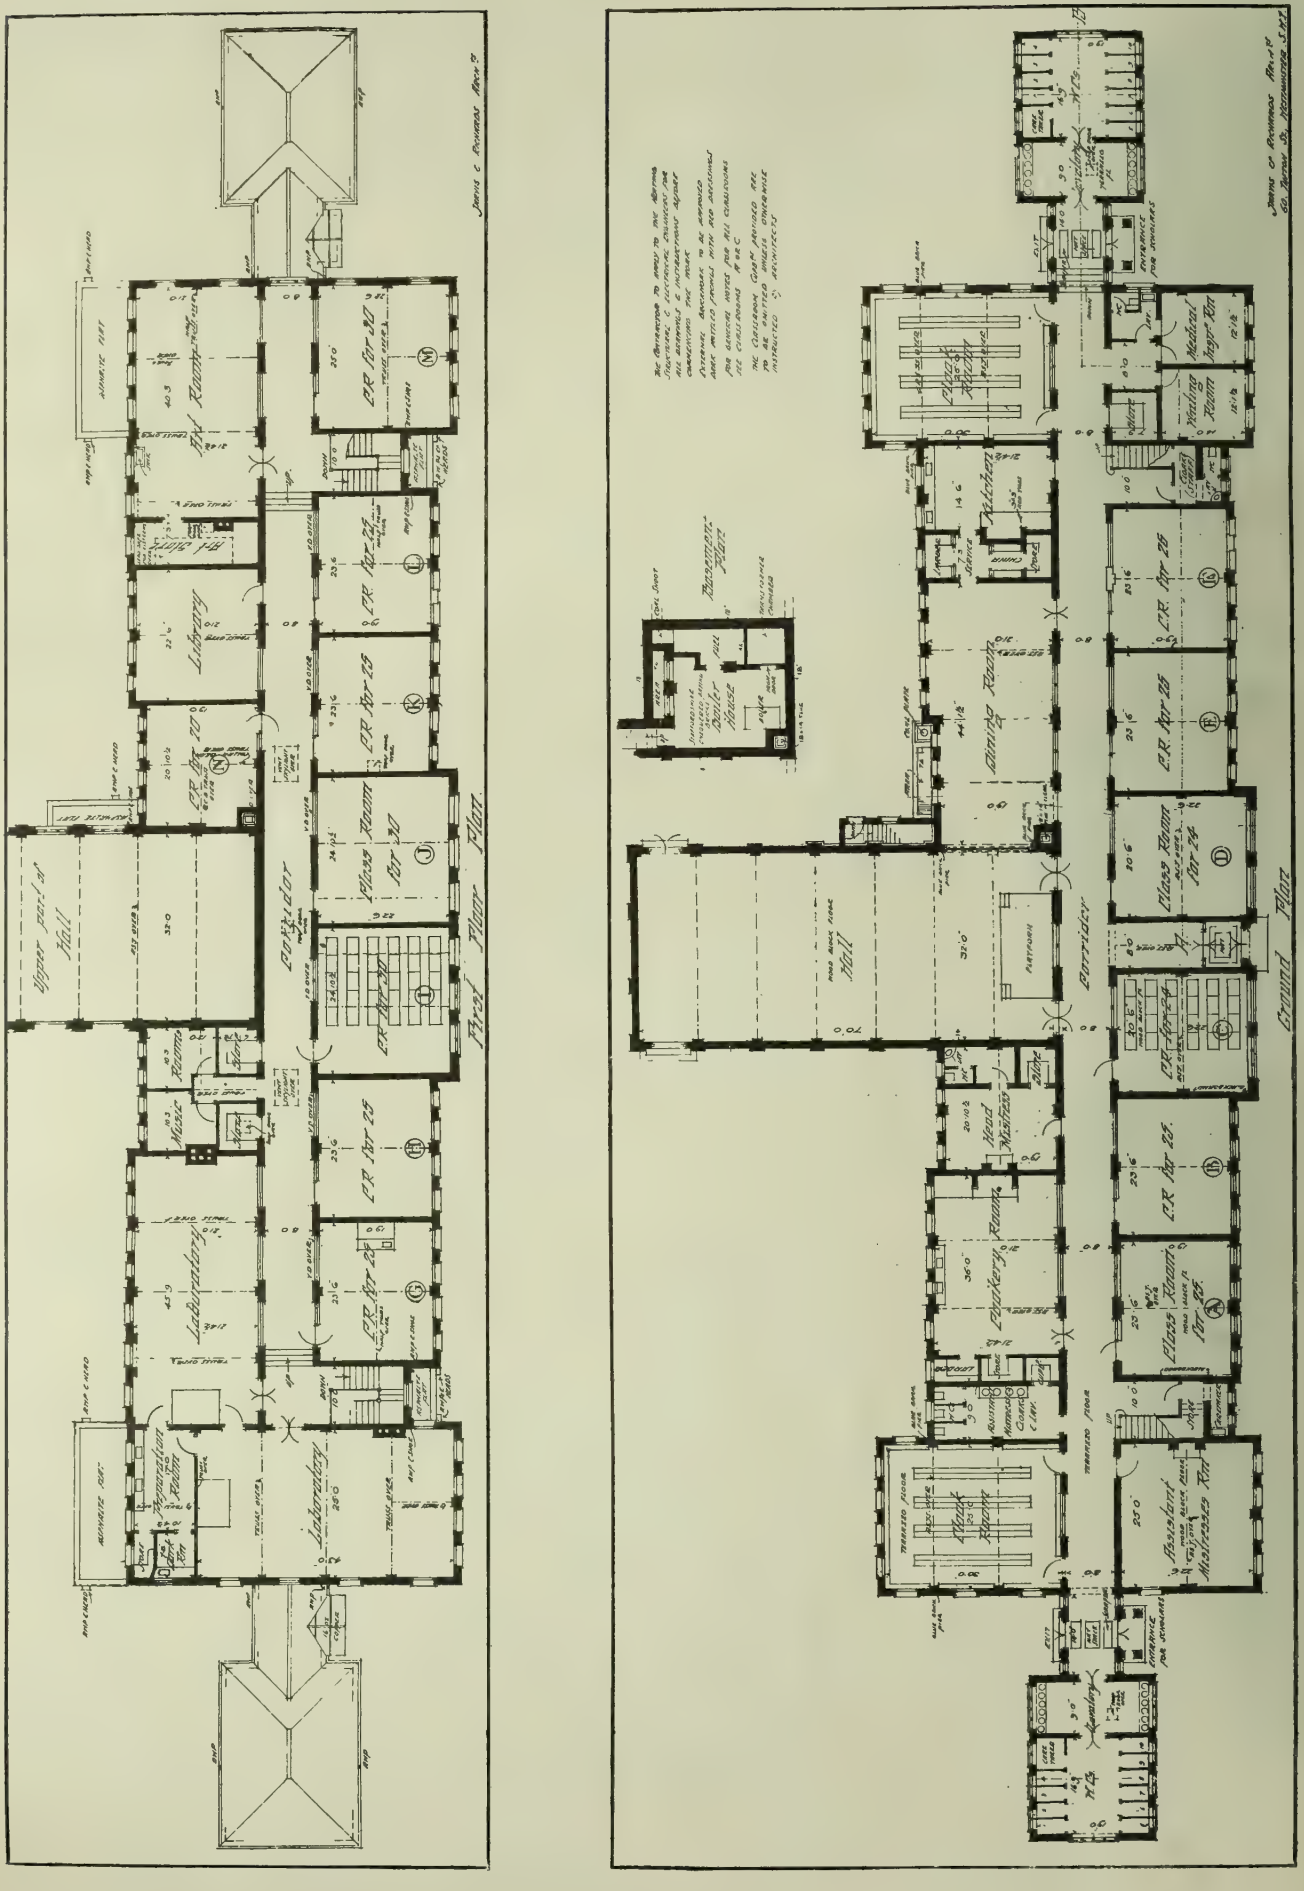
Reading Cemetery Chapel.

The awards in this competition are given on page 230, and we illustrate the winning designs this week. The Chapel is to be used for burial services at the cemetery for all denominations, and will not be consecrated. In designing the building, therefore, the architect of the first premiated design, Mr. G. Berkeley Wills, F.R.I.B.A., made an attempt to give the impression of a religious building without any definite leaning to any particular denomination. One of the requirements of the promoters was that the building should be as well lit as possible, and this requirement has been met without the appearance of over-fenestration externally.

The two side porches will be converted into vestries in accordance with the wishes of the promoters, and the bell will be placed in the roof space behind the circular opening in front pediment as being more easily accessible by a trap-door in ceiling. This roof space also contains the expansion tank for the heating system. The cupola will be used as a ventilator.

The proposed materials are 2 in. local multi-coloured bricks with orange-red dressings, stone cornice, etc., metal windows, and tiled octagonal dome with lead hips. Internally the chapel will be finished simply, with red-tiled floor and plaster dome on pendentives.

Elementary School, Rotherham.



We illustrate this week the winning designs in this competition. The full awards are given under Competition News, page 230.

Mercers' Hall in Cheapside.

Mercers' Hall, in Cheapside, is now undergoing the most thorough restoration since its rebuilding after the Great Fire of London. For more than a year the hall has been closed for other than clerical work, and about a year and a half more must elapse before the guild will be able to re-enter into full occupation. The restoration is necessitated, says *The Times*, partly by the ravages of the death watch beetle in the older beams and partly by general decay due to various causes.

The modern front of the hall, in a modified Renaissance style, gives no clue to the older work behind, which is more conveniently approached from a return frontage in Ironmonger-lane. The Mercers' Company, the first guild of the City, has been associated with successive buildings on this site since the generation of St. Thomas of Canterbury, whose father, Gilbert a Becket, is believed to have been a member of the guild. When the martyred Londoner's sister and brother-in-law founded in his honour the Hospital of St. Thomas of Acon, the management of it was vested in the Mercers' Company.

At the Reformation the guild bought part of the site, and erected thereon a hall which lasted until the Great Fire of 1666. A second hall, designed by Edward Jarman, was finished in 1682. There were important reconstructions in 1880 and 1908. In the work now in progress every part of the building is carefully scrutinised with a view to detecting the ravages of insects or time, or both. In some cases a complete removal of a piece of masonry or woodwork is necessary; in others the affected parts are treated in such a manner as to prevent further deterioration for a long time to come.

PARTHENON STUDIES.

By W. R. LETHABY,

VII.—DIMENSIONS AND DETAILS.

Penrose accepted Stuart's method of determining the length of the Greek foot by taking the name "The Hundred Foot" (Hecatompedon) given to the Parthenon, to apply to the width of the platform, which is 101.341 English feet. It thus appeared that the Greek foot was greater than the English. Re-examining the problem with fuller data, Dörpfeld concluded that it was the length of the celia of the earlier Parthenon to which the name was given, and he estimated the length of the Attic foot as about .295 metre. More lately a length of .293 metre has been obtained from dimensions actually figured on drums of columns found in Asia Minor. This ancient foot, as thus determined, was about 11.65 English inches—that is, it was shorter than ours by about one-third of an inch.

Much has been written on supposed systems of proportion by which it is claimed the dimensions of the several parts of Greek temples were interrelated and the whole made harmonious. Very little, however, is agreed, and most of the schemes are mutually antagonistic. The size of the platform of the Parthenon measured on the top step was found by Stuart to have a width and length in the ratio of four to nine, and Penrose says it is almost certain that the ratio was intended. He gives the measures as 104.4 by 228.3 English feet. Watkiss Lloyd, one of the ablest of our Parthenon students, accepting this result, elaborated it into a general scheme which Penrose incorporated in his *Principles*. Another system is that of Mr. Jay Hambidge, very fully worked out in his volume on the Parthenon (1924). Mr. Hambidge says:—"The ratio 4 : 9, to which the stylobate of the temple very nearly conforms, is an easily comprehended arithmetical concept." But having a system of his own, which is far from easy for me to comprehend, he does not approve, and writes as follows:—"It has long been assumed that the relation of the end to the side was four to nine—that is, one to two and a quarter. This is not true; the amount of error is too great. The real relationship is 1 to 2.25109, and the real rectangle measures 101.347 by 228.141." This might seem "near enough" to us, but Mr. Hambidge throws over the area of the top of the platform entirely and sets to work on the larger space covered by the bottom step, and that he fits into an elaborate system of his "root five rectangles." (On these theories see "Dynamic Symmetry," a criticism by E. M. Blake in *The Art Bulletin*, U.S.A., c. 1920.)

A choice is thus before us of accepting the comparatively simple ratio 4 : 9 at the top of the platform; a very complicated scheme at the bottom step; or to pass by the whole business as too irrational and hypothetical. The dimensions as given by Penrose and Hambidge vary very slightly, and both approximate closely to 104 by 234 Greek feet of the 11.65 inches standard. These whole numbers, too, are exactly in the relation of 4 to 9 (26 by 4 and 26 by 9). I thus find myself drawn to the conclusion that Stuart and Penrose were right in this respect. It may be that some of Watkiss Lloyd's other ratios would be confirmed in a like manner by translating them into Greek feet, and if they work out, as in the case just examined, into "round numbers," they are likely to be right.

The most certain fact that I find in regard to the "proportions" of the buildings of the Greeks is that they liked dimensions of simple round numbers, such as 1, 10, 20, 100, much as we do. The real basis of Greek building measures was just their foot rule, a liking for whole numbers and simple relations of length to width, such as 1 to 2, 2 to 3, or 4 to 9. Examining dimensions at the Parthenon we seem to find many instances of the use of the foot of 11.65 English inches. Thus the height of the main columns is given as "about 34.2 feet" (English), which agrees closely with 35 Greek feet. The columns at the "Theseum" are said to be about 19.3 feet—that is, about 20 Greek feet. When I am told that the circumference of the outer columns of the Parthenon is 19½ English feet and remember that they have twenty flutes, I wonder if the exact size of the column was not decided on, so that the flutes should be one Greek foot wide. Stuart gave the width of these flutes at 11.688 and this is just a Greek foot.* In many Greek buildings smaller dimensions like the spacing of dentils or the height of the roofing steps of the Mausoleum are frequently about one Greek foot.

*Mr. Troup measured it for me, and says "The flute is just under 12 inches in width, say, 11 in. at the base."

Inclination and Curvature.

The curved and inclined lines and surfaces of the masonry were closely investigated by Pennithorne and Penrose, and the latter especially made measurements of great accuracy. The various adjustments by inclination and curvature are usually explained as having been devised to correct optical illusions, such as an appearance of sagging in the epistyle if it had been perfectly level and of falling outwards in the columns if they had been truly vertical. The platform instead of being level rises in a curve about three inches at the centre of the fronts and about four inches on the flanks, and this curvature is echoed by the great beam. It may be that the sloping of platforms arose originally from practical considerations, such as throwing water off and a provision against sinking. (Fig. 1.)

Penrose, in an article in The Builder, 1877, said that similar curvatures were found in other Greek temples. The fourth century temple at Tegea, which has recently been excavated, is described as having been

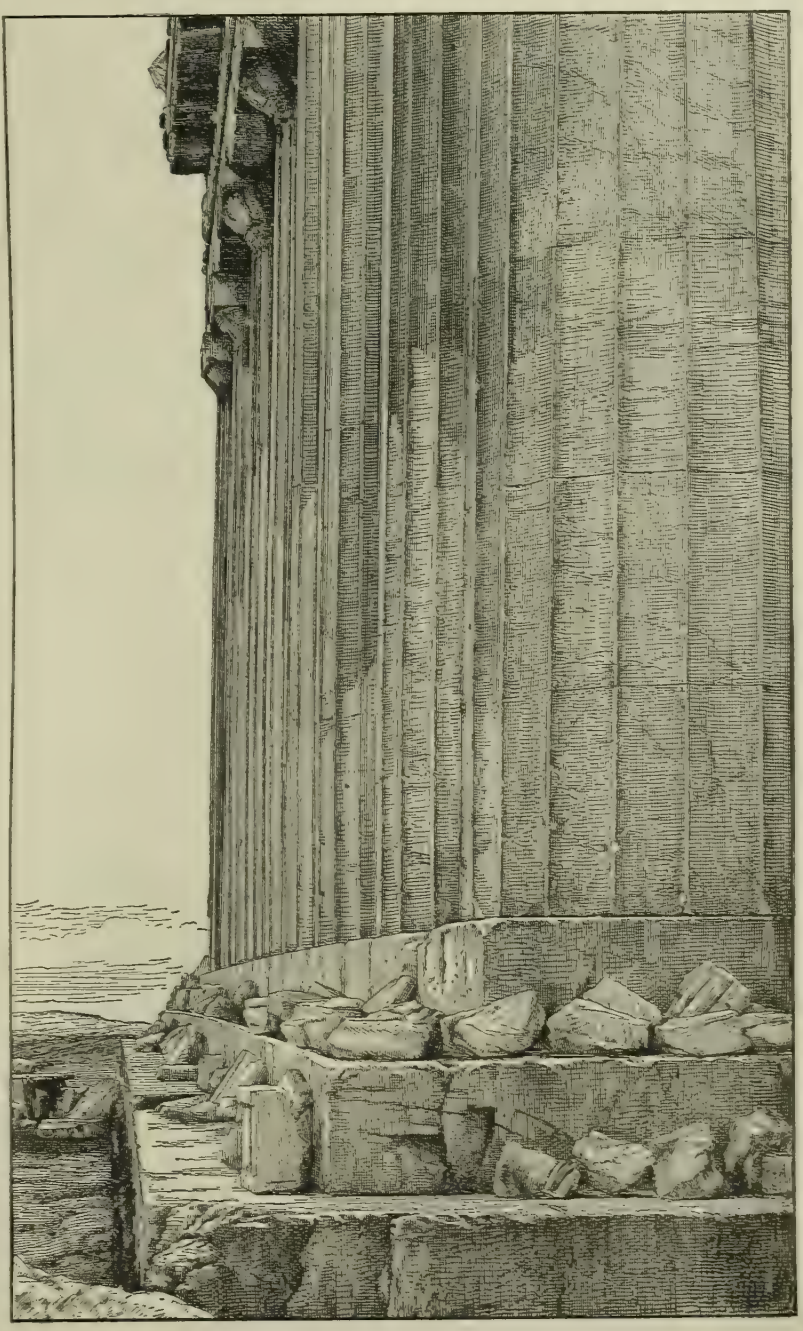

Fig. 1.—Curvature and Entasis: From J. T. Emmett's "Bane of English Architecture."

"almost unrivalled in fineness of workmanship; there were refinements in the setting of walls and columns, and the stylobate had horizontal curvature, which began in the foundations."

The curvature of the platform of the Parthenon, rising as it does from the angles in both directions, must, I suppose, be thought of as part of a convex surface on an elliptical plan. (Fig. 2.) The epistyle naturally followed the curvature of the platform. It is probable, I think, that the columns were slightly inclined inwards from practical considerations of stability, and that horizontal curvature also arose in the practical needs of building. The developed system, however, of making slight adjustments resulted in harmonising what otherwise might have been rigid and harsh.

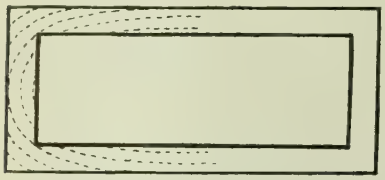

Fig. 2

Penrose observed—"Travellers who have wondered that the fronts of Greek buildings were so much less dry and hard than our imitations of them must have felt, however unconsciously, the beauty of the horizontal curvature."

Considering the problem of these curvatures twenty years ago, I pointed out that the usual view that they were intended to correct illusions of sagging in the lines was too much of a "front elevation" idea (Fig. 1). "The real reason would seem rather to have been a desire to sweeten the transitions and to create a *unity* out of the many similar parts. Also, as Penrose has seen, delicate effects of light and shade must have resulted from slight changes in the direction of the surfaces." H. Langford Warren, in his "Foundations of Classic Architecture," gives a condensed account of the variations based on Penrose, and sums up, "In the whole building there is scarcely a rigid straight line or a vertical." . . "The motives for these modifications were: preference for the beauty of curved lines rather than straight; appreciation for the vitality produced by a freehand character; and desire for the unity resulting when no part could be transposed without injury to the whole. Thus the building was endowed with the characteristics of an organism."

Polished Marble and Bronze.

As is well known, the masonry was fitted together with the finest possible joints; the beds were rubbed on a plane table. "This close fitting of the blocks was called *harmonia*. From whence, perhaps, arose the fabulous creation of the walls of Thebes by the power of music or harmony" (Wilkins). The whole of the exterior surfaces of the Parthenon were wrought, Kinnard says, "with the exquisite finish of a cameo." They were, in fact, probably finished by polishing. Polishing is frequently mentioned in the building accounts of the Erechtheum. K. O. Müller thought, from the testimony of these inscriptions, that it was the custom to polish marble walls. According to the report of the committee which inquired as to the evidence for painting in 1835 polished surfaces were actually found where they had been protected by painting.

The nude parts of the sculptures seem to have been actually polished. We have found it stated that protected parts of the metopes had a polished surface. A large part of the back of figure A in the west pediment, usually called the Ilissos, still retains a surface which in parts reflects, considerable portions of the torsoes of Hermes and Poseidon exhibit similar polish, so does the leg of Iris. In the East Gable a large patch of the underside of the leg of Dionysos is quite brightly polished. The most convincing and almost amazing evidence is to be found on the neck of Helios; this having been in the angle of the pediment was exceptionally well protected and the polishing is glitteringly bright, so that one may see the bars of the skylight reflected as in a mirror. It may not be doubted that the nude parts were polished to a reflecting, indeed a glittering, surface. No contributory evidence is required, for the polish exists still, but it may be pointed out that many other antique marble sculptures are brightly polished. The little Socrates recently added to the British Museum is polished, and so are two or three small works in the glazed cabinet; one head, "Perseus," about half-life size, glitters like glass. These, it may be said, are only little things. The superb Hermes of Praxiteles at Olympia has, I believe, the nude parts finished with a polished surface. Furtwangler says, "We can only have a faint notion of the original with all its gay colouring and metal ornaments, and the varnished [?] tone of the marble." The Aphrodite of Cnidus was of "shining Parian marble" and the Petworth copy of the head is polished. Some will say "repolished," and then we will turn to the Apollo of Cyrene, an untouched original, although rather late, which retains its polished surface. All will agree that the flesh parts of the great ivory statue in the interior of the temple were polished; the flesh surfaces of the pediment marbles were finished in the same way. As the sun struck them they flashed back light and their faces shone so that they might be barely looked upon. Thus the large amount of gilt-bronze associated with the sculptures was harmonised. Shining polish and bright colour were elements of beauty.

"Another peculiarity which is remarkable in these sculptures, as well as in the reliefs of the metopes and even those of the frieze, is this, that a great number of appendages, arms, buckles, clasps, utensils, ornaments of the head, and other similar parts were of bronze, and without doubt gilt, though the figures are of white marble. A great number of holes and grooves exhibit traces of these appendages, and even contain some remnants of them" (Visconti, 1816). Larger accessories, like the wheels of chariots in the metopes and doubtless still more important parts of the pediment sculptures, were of bronze. Then, as we have seen, there were bronze vases on the pediment. The whole work must have been conceived as composite—of marble and bronze. Such thought is likely enough, coming from the bronze sculptor Pheidas, the creator of the great composite image within the temple. Moreover, the Erechtheum, the temple which followed the Parthenon, had black marble brought into the scheme and inlays of glass beads. It, too, was a composite work.

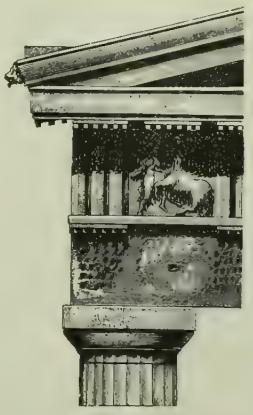

Fig. 3.

On the exquisite drawing of the east front by Pars, in the Elgin gallery, traces of circular objects, once attached to the epistyle by large bronze dowels at the centre, are shown together, with indications of what seem to have been inscriptions between. Wilkins and others thought that these objects must have been "shields of gilt metal," and Woods observed bronze stains around the circles. It is agreed that large bronze shields were fixed under the metopes. Penrose gave careful dimensions, showing their exact size and position. They were all of one diameter, and fixed by means of neatly cut holes. It seems clear from this uniformity that the shields of the east front at least were put up at one time. (Fig. 3.)

In 1894 Mr. E. Andrews, of the American School in Athens adventurously obtained paper squeezes of the rivet holes of the lines of letters between the shields, and was able to make out the fact that the whole formed one long inscription recording the erection of a statue of Nero, A.D. 61. His examination led him to the conclusion that the shields on the various fronts were put up at four different times. When were the earliest—doubtless these of the east front—attached to the epistyle? Gell long ago thought that these shields were "spoils of Persians." (Note on a drawing in the Museum.)

Leake mentions them as "the gilded shields which long after the building of the temple were placed on the architrave."

"Under each metope of the eastern front are quadrangular holes which have been filled with pieces of marble. These were cut for the fastening of shields which are marked by circles on the marble where the oxidation is less intense than on the surrounding parts. These shields formed a beautiful enrichment. Similar, though larger, excavations are on the western front, but over each column only, and smaller on the northern and southern sides. We are informed by Pausanias that the temple at Olympia was adorned with gilded shields, and that of Delphi, and that the tyrant Lachares, when he fled from Athens, carried away the golden shields of the Acropolis.* . . . Arms captured from the enemy were a common dedication. Alexander the Great sent 300 suits of Persian armour to the Temple of Minerva in Athens." (Leake 1841.)

Penrose says that the shields were put up "at some uncertain period; they are said to have been fixed by Alexander the Great—they were attached more rudely than is likely to have been the case at the time of building." In Baedeker I find it stated that the shields "are supposed to have been placed here by Alexander the Great after his victory at the Granakos in 334 B.C." This supposition seems to be wholly based on the fact that Alexander sent spoils of battle to Athens, but the shields of the Parthenon were too large and uniform to have been carried in war.

Wordsworth (1836), while supposing that the shields had been won in battle, thought that they were on the temple in the fifth century. 'We may venture to believe that these shields caught the eye of Euripides.

"And let me hang a Thracian target high
Upon the peristyle of dread Minerva's fame."

The chorus which sang these lines probably pointed to these shields from the theatre which is below the eastern front of the Parthenon.' There is ample evidence that the Greeks had a custom of affixing votive shields on their temples. In 456, before the Parthenon was begun, the Spartans dedicated a golden shield at the Temple of Olympia for their victory at Tanagra.† The Athenians dedicated shields at Delphi after the Battle of Plataea, which with others were fixed in the metopes. The Parthenon itself was a memorial of Victory, and it surely would have been most appropriate that shields should have been hung along on the epistyle from the first. Gold and bronze were so generally used throughout the temple that I am drawn to think that

*This was in 296 B.C.

†More than twenty were at a later time attached to the architrave of the temple by the Roman general, Mummius, c. 146 B.C.

the association of metal and marble was as much one of the data of the design of the building as the combination of gold and ivory was in the thought of the maker of the great image in the interior.*

Colour and Gilding.

The model of a portion of the angle of the building recently placed in the museum reproduces the colouring and gilding of the marble work, for which there is full evidence in the researches of Penrose, Paccard and others. The metope in this section of the entablature, however, is left plain, and this might create an impression that the sculpture was uncoloured, which is contrary to the fact. Dodwell has rather a full account of the painted architecture. Wilkins, after describing the painting and gilding on the Propylæum and Theseum, goes on to say: "Colouring is not confined to the mouldings, for traces are upon the sculptures. Those on the pediment of the Parthenon and on the frieze of the Theseum exhibit vestiges of this practice." Traces of gilding on the architectural details are mentioned by Cockerell and in the second edition of Stuart's Antiquities, Vol. 11. Of the sculptures Cockerell wrote: "Indications of colour on the marbles of the Parthenon are apparent in several portions, both of the sculpture and the architecture, after an exposure of more than two thousand years. . . . The weapons, the reins of the horses and other accessories were in metal, probably gilt. Nor can it be doubted that colour was introduced, the marbles of Ægina exhibit abundant proofs of the practice of painting, both on the statues and the architecture, several of the members of which were enriched with painted ornaments in gold vermilion and blue. The tympanum was painted a light blue."

At the Parthenon the backgrounds of the frieze metopes and pediments were coloured. Red has been noted on the west pediment and the metopes, while the background of the frieze was blue.

Examination of the great statues of the pediment will show that painting would have been required to bring out the difference between nude and draped parts. Some small patches of waxy matter seem still to adhere to the draperies, as, for example, that over the fragment of a right thigh of a female figure in the museum. In the report of 1836 on painting it was stated that patches from the "Fates" of ochrous tint and glossy surface contained combustible matter, perhaps wax. In the Museum Handbook of 1851 it is stated that "traces of paint may be observed on different parts of the figure" of the reclining male of the west pediment. But that nude bodies were painted is improbable. The traditional custom seems to be well represented by the coloured restorations of the Ægina pediment sculptures at Munich. Sight of these is convincing. The draperies and shields were elaborately painted, so were eyes, mouths and hair, but the flesh parts were represented by the marble surface. As Michaelis says: "The limitation of painting to certain parts of sculpture overthrows the old theory that either every part had been painted or none at all. But the close connection of the two arts recalled the words of Plato; that the sculptor supplied the drawing and form, but the complete effect of his work was only produced after the addition of painting" (*A Century of Discoveries*, 1908).

In 1912 I observed traces of the pupil of the eye of Selene's horse in the museum (The paint has protected the surface of a circle about the size of a shilling on the inner eye, and in some lights it can almost be plainly seen. It is against the upper lid, so that the eye was cast up. The horses of the pediments, with their startled eyes, gleaming teeth in red jaws and gilt harness, must have been very different from what we are accustomed to think of as classic sculpture.

The figures of Athena in both gables doubtless had much gilding on helmet and ægis.

*On the model at the British Museum shields are shown over the columns of the east front. This is a mistake: there were fourteen, one under each metope

It is probable that the hair of some of the pedimental figures was gilded. There is record that traces of gilding were found on the hair of figures on the slab in the Louvre. The great Athena of the interior had hair of gold and her figure on the west front seems from the rivet holes to have had some tresses of gilt bronze. The Hermes of Olympia has red on the hair, "supposed to have been laid on as a ground for gilding" Frazer, *Greek Sketches*, p. 295). Old descriptions of the Medici Venus mention gilt hair (Socy. Dillettanti *Specimens of Sculpture*). A fine original head at Athens has gilding on the hair (Farnell, *Greek Cults* I. p. 368). A statue of a woman or Muse at Dresden had the hair "originally heightened with golden colouring, traces of red painting as a foundation for the gilding being still visible" (Furtwängler's *Greek and Roman Sculpture*, 6. 237). An archaistic Artemis attributed to the first century B.C. at Naples, "has traces of gold colouring on her hair." All these, with the exception of the Hermes of Praxiteles, were much later than the Parthenon, but the vases show that the fashion of gilding on figures was well advanced in the middle of the fourth century (see Vase E.6 in the British Museum). It is curious but similar illumination of architecture and sculpture with gold occurred at the high moment of western mediæval architecture. The Parthenon, with its polished surfaces, bronze attachments, fair colouring and gilding, was bright and shining beyond belief.

From Tomb of Merehi, British Museum: An echo of acroterion of the Parthenon

BOOK REVIEWS

The Architect in History. By Martin S. Briggs, F.R.I.B.A. (Oxford: The Clarendon Press.) 400 pp.; 8vo. 10s. nett.

As the author says in his preface, there is no mystery about the purpose of this book; "it is an honest attempt to claim for the architect the position in history that is his due, and to expose prevailing fallacies about his work where substantial evidence or reasonable inference permits." In this very useful and readable book there is also a good deal of reasoned criticism of architecture, and amongst the 45 illustrations there are a considerable number of purely architectural items such as details and plans from the drawing-boards of architects of past times and from the drawings of architectural bookmakers. Notable amongst the latter is Jacques A. du Cerceau's delightful sixteenth-century bird's-eye perspective of the Chateau of Gaillon.

Perhaps for the first time in one handy volume we are presented with a comprehensive range of portraits of architects throughout the ages, commencing with Hadrian, emperor and reputed architect of the 2nd century, Etudes de Montreuil of the 13th century, such men as Vasari, Brunelleschi, and Bramante of the Italian Renaissance, and a long series down to the mighty men of the English Renaissance and the Victorians of Gothic-revival and neo-classical fame. The author's word-pictures of these great architects are invaluable not only from the historical point of view, but as models of good writing. He has a happy knack of seeing historical records in their proper perspective and of marshalling his ascertained facts and presenting them in comprehendable form. These pen-pictures, and more particularly those of the architects of the very earliest historical periods, are drawn with a fine sense of humour; and the fine egotisms of some of these great men afford delightful reading.

We are not in a position to say positively that not a single architect of note has been omitted from this encyclopædic commentary, but the impression left with us is that the author must have ransacked the libraries of Europe for his biographical details and appreciations, and this belief is confirmed by the very comprehensive bibliographies appended to each chapter.

The Egyptian architects were apparently never hampered by want of funds, and "hence the pyramids." The case was different with Welbey Pugin, who, as the author cites, when he was asked to design a church which was to be very large to serve a populous neighbourhood, very handsome to outrival the adjoining sanctuary of another faith, and very cheap in view of scanty funds, replied at once to the prelate who had commissioned him: "My dear Lord, say *thirty shillings* more, and have a tower and spire at once.—A. W. P."

The reader must not take such trivial sidelights as any true measure of the depth of purpose in this fine addition to architectural studies any more than he will take Pugin's flippancy as any measure of the real greatness of one of the really great Victorians.

The author's own drawings are not the least attractive items in the volume, and he gives us valuable information (compiled from contemporary records and the comparatively few extant drawn plans of the Gothic periods, of which some are parchment palimsests which have been preserved in the form of second-hand materials for illuminated MSS.) as to who were the actual architects or only the art directors in the building of our old cathedrals and abbeys. In this connection he has something to say on the vexed question of the precise standing of William of Wykeham as architect or artistic director, inclining rather in favour of "Master" William Wynford as the real architect at Winchester. This reminds us of a story, which passes current locally, concerning the legend "Hoc Fecit Wykeham" carved on the face of the Winchester Tower at Windsor Castle. William's royal master, reading this as "Wykeham made this," called in high dudgeon upon his art director for some explanation of this arrogance; whereupon the astute courtier-Bishop suggested an alternative reading: "This *made* Wykeham."

To set forth anything like an exhaustive résumé of the contents of this book is impossible in a necessarily short review, but we believe it will prove to be a companionable help to all architectural students.

On the Road. Vol. VII of the Dunlop Pictorial Road Plans. (Published by Ed. J. Burrow & Co., Ltd., Cheltenham and London.) Price 6d.

The Constable country is dealt with in prose and picture by the seventh and concluding volume of the Dunlop pictorial road plans. The motorist is conducted by "strip map" from London, not only through the land which Constable limned, but all over East Anglia, from the Fens in the north to Clacton-on-Sea in the south—to Cromer, Yarmouth, Lowestoft, Felixstowe, and Harwich. There are town plans of Cambridge, Norwich, Colchester, and Ipswich, not to mention a small scale map of London itself; and there are forty-seven of the "strip maps" which the series has made famous again, with their neat little sketches on each side of the highway, beginning with the point where John Gilpin set out upon his neck-breaking ride, and including everything of note upon the way, from ancient gallow signs to modern 'phone boxes.

THE LONDON BUILDING ACTS AND THEIR APPLICATION—XXIII.

By H. V. MILNES EMERSON, A.R.I.B.A.,

Notes to Sections 78, 79, and 80.

For definition of Public Building, see Section 5, Subsection 27.

The thickness of walls to public buildings is in the discretion of the District Surveyor, but appeal against this and other requirements can, if necessary, be made to the Tribunal of Appeal.

Section 12 of the Metropolis Management and Building Amendment Act, 1878, give the Council power to make regulations relating to public buildings:—

"The Board (now the L.C.C.) may from time to time make, alter, vary, and amend such regulations as they may think expedient with respect to the requirements for the protection from fire of houses or other places of public resort within the Metropolis to be kept open for the public performance of stage plays, and of houses, rooms, or other places of public resort within the Metropolis containing a superficial area for the accommodation of the public of not less than 500 sq. ft., to be kept open for public dancing, music, or other public entertainment of any kind, under the authority of letters patent from Her Majesty, her heirs or successors, or of licences by the Lord Chamberlain of Her Majesty's household, or by any justices of the peace or by any quarter sessions, which may be granted for the first time after the passing of this Act; and may by such regulations prescribe the requirements as to position and structure of such houses, rooms, or places of public resort which may, in the opinion of the Board, be necessary for the protection of all persons who may frequent the same against dangers from fires which may arise therein or in the neighbourhood thereof; provided that the Board may from time to time in any special case dispense with or modify such regulations, or may annex thereto conditions if they think it necessary or expedient so to do."

The remaining paragraphs of this section deal with the making of the regulations and penalties for keeping open any house or other place of public resort, without a certificate from the Board.

Section 13.—A person interested in any premises about to be constructed, or in the course of construction, which are designed to be licensed and used within the Metropolis for the public performance of stage plays, or for public dancing, music, or other public entertainment of the like kind, may apply to the licensing authority for the grant of a provisional licence in respect of such premises. The grant of such provisional licence shall, in respect of the discretion of the licensing authority and procedure, be subject to the same conditions as those applicable to the grant of a like licence which is not provisional. A provisional licence so granted shall not be of any force until it has been confirmed by the licensing authority; but the licensing authority shall confirm the same on the production of a certificate by the Board that the construction of the premises has been in accordance with the regulations and conditions made by the Board as hereinbefore provided, and on being satisfied that no objection can be made to the character of the holder of such provisional licence.

From the foregoing sections it will be seen that a provisional licence can be obtained. It is best to consult the L.C.C. in the preliminary stages when about to erect a theatre, cinema, or other public building, so that the question of exits and other important matters can be decided. If this is done, little trouble (if any) will be experienced when the plans are deposited for a certificate.

The following are briefly the latest L.C.C. regulations relating to places of public resort within the Administrative County of London, but the chief regulations are generally applied to public places throughout the country.

Before the building is commenced the drawings should be deposited and application made for a certificate for authority to open any such premises. The drawings in duplicate must show complete plans, elevations and sections to ⅛ in. scale, a block plan to 1-16 in. scale, and description of materials and mode of construction.

The site should abut upon, and have frontages upon, two or more thoroughfares. Such frontages should equal about half the length of the total boundaries, and the thoroughfares need not wholly be public, provided they are of the required width and connect to public thoroughfares, but a site upon back land only will not be approved. The following are the minimum width of thoroughfares required.

Premises accommodating 500 to 2,000 persons, one thoroughfare 40 ft. wide.

From 2,000 to 3,000 persons, one 40 ft. wide, and one 30 ft. wide (or 20 ft. wide if a footway only).

From 3,000 to 5,000, one 50 ft. wide and one 30 ft. wide.

Over 5,000 such frontages to thoroughfares as required by the Council.

Walls.—The thickness of walls for public buildings are not given in the London Building Acts, but the following are the regulations of the Council for such walls:—

"The thickness of all external, party or cross walls shall not be less than the thickness prescribed by the London Building Acts, 1894-1920 (Clause 12 of Part II of the First Schedule to the Act, 1894, excepted), for walls of like height and length in buildings of the warehouse class, or such greater thickness as shall be required by the District Surveyor or the Tribunal of Appeal, under section 78 of the London Building Act, 1894."

The floors, tiers and roof must be constructed entirely of fire-resisting materials, but in the case of cinematograph and small concert halls the roof can be constructed of steel trusses and boarding covered with slates, etc. Coke breeze concrete is not deemed to be fire-resisting, and can only be used for floors on solid ground, or on concrete or for partitions, etc., and such concrete must be kept 2 in. away from constructional steelwork.

The tiers, which can be constructed of concrete and constructional steelwork or reinforced concrete, must not have a slope greater than 35 deg., and the height from floor to ceiling in any part must not be less than 10 ft.

Two exits, 5 ft. wide, are required from each floor or tier which accommodates not more than 500 persons and an additional exit for each 250 persons above 500. Two of the exits from each floor or tier shall deliver into different thoroughfares or ways.

All lobbies, corridors or passages must, at the narrowest part when finished, be of the width of the exit to which they lead. No projection exceeding 2 in. from the walls will be allowed within 6 ft. 9 in. of the floor, excepting the handrails.

Staircases from any tier not accommodating more than 300 persons shall not be less than 4 ft. wide, above 300 persons 5 ft. wide. The steps must be solid and square, with treads not less than 11 in. and risers not more than 6 in., with a minimum of three steps and a maximum of 16 steps in each flight. Reinforced concrete steps can be of the spandril type. The handrails to be 2 ft. 9 in. above steps and landing, projecting not more than 3 in. and supported on strong brackets. The handrail on return newel walls must be in a chase so as not to project over the landing.

All doors used as exit doors to be hung in two folds and to open outwards. When used as entrance doors also, one fold to open both ways. Automatic fastenings only to be fixed to all exit doors.

Revolving doors may be used in hotels and restaurants, but these must be made to collapse automatically, and side doors opening outwards must also be provided.

Gangways to be not less than 3 ft. 6 in. wide, leading direct to the exits and intersecting rows of seating, so that no seat shall be more than 10 ft. from the gangway measured in the line of seating. If the seats are 20 in. wide, six seats comply with this condition, but in some cases the seventh seat (the edge of which is 10 ft. from the gangway) will be allowed. A greater length between the gangways will also be allowed if the width of the seats exceeds 20 in.

THE PRESERVATION OF STONEHENGE

An appeal is issued by the Stonehenge Protection Committee for a sum of £35,000 to purchase the land round the famous circle. The appeal is signed by Mr. Stanley Baldwin, the Prime Minister, Mr. J. Ramsay MacDonald, M.P., the Earl of Crawford (President of the Society of Antiquaries), Viscount Grey (Vice-President of the National Trust), and the Earl of Radnor. The signatories state:—

"It is now nine years since Sir Cecil Chubb made the nation the magnificent present of the Stonehenge circle itself; and the great stones are safely in the charge of the Commissioners of Works. The land of the Plain around them, however, is still private property. So long as it remains in private hands there is an obvious danger that the setting of Stonehenge may be ruined and the stones dwarfed by the erection of unsightly buildings on the Plain.

"We are glad to be able to state that options have just been secured for the purchase of an area of the Plain which includes the whole of what may be called the 'Stonehenge sky-line.' Should the purchases be effected the Air Force buildings will be removed, further building will be prevented, and the valuable archæological remains of the site permanently protected from the plough.

"The land purchased will be placed under the guardianship of the National Trust; and part at least of the revenues derived from rents for grazing, etc., will, it is hoped, be available for the further protection of the archæological treasures and amenities of Salisbury Plain.

"Cheques should be made out to the National Trust (Stonehenge Fund) and crossed Barclays Bank, and sent to the Secretary, 7, Buckingham Palace-gardens, S.W.1."

Mr. E. H. Harbottle.

We regret to record the death, on July 30, at his residence at Topsham, of Mr. Edward Hall Harbottle, senior partner in the firm of Messrs. E. H. Harbottle & Sons, architects, of Exeter. Mr. Harbottle was 83 years of age.

U.S. Memorial at Paignton.

On July 31 the Bishop of Exeter dedicated in the parish church of Paignton a reredos erected by the American family of Chapin to the memory of their ancestor, Samuel Chapin, who was baptised (1598) and married (1623) in the church. He sailed for America in 1638, as an inscription records. The congregation included many members of the Chapin family, who had assembled in England for the occasion, and some of whom, distant relatives, met one another at the memorial service for the first time. The reredos has been erected from the designs of Mr. W. D. Caröe, F.S.A., and incorporates some fragments of the reredos which existed in Samuel Chapin's day.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—Ed.

Patent Water Ejector.

[Reply to D, August 5.]

Sir,—There are a number of cellar-draining appliances on the market which are put in action when the flood-water lifts a ball float, which turns on the water from the supply company's main. The flood-water is drawn through the open arm of a "T"-piece, by the suction of a jet of water from the supply main. If the care necessary to ensure the continued good working of any mechanical appliance can be given, and if there is no objection to the considerable noise that usually occurs upon each discharge, this apparatus may satisfy the required purpose, provided there is no risk of the town's water being cut off when it may be needed to discharge the flood-water from the cellar.

It should also be appreciated that this apparatus must be housed in a sump formed below the level of the cellar floor, and drainage must be provided to conduct the water from the surrounding subsoil to this sump. If this is not done, the water may find it easier to percolate through the walls than to drain into the sump. The water companies insist upon the supply to such apparatus being by measurement, and one should consider whether the cost of installation and the annual charges for maintenance and water supply will not, by far, exceed the interest upon a capital sum that would be required permanently to waterproof the cellar by applying an inner lining or "tank" of waterproofed cement.

L. E. Walker.

Lime for Plastering.

[Reply to "Puzzled," July 1.]

Sir,—In reply to "Puzzled's" inquiry, "J. R. T." has the right idea, but I would express it differently. Fat limes do increase in bulk when slaked or run into putty, and this increase varies with their degree of purity. The chalk limes and some magnesium limes increase very considerably, and in varying degree it is true of practically all types of building limes, including the grey stone limes and the blue lias limes. On many occasions I have examined results in bulk, and, in addition, have experimented with small quantities, and the results show a variation, according to type, of from 30 per cent. to 100 per cent. increase. For instance, the Surrey chalk limes and some magnesium limes bulked up to 90 per cent., measured in the putty bin six weeks after the excess water had drained off, and with liberal allowance for shrinkage cracks.

It would appear, therefore, that lime putty mixed while wet with proportions of sand, will, when the remaining water content in the putty has been evaporated, resolve into something less and will account for the difference found by subsequent analysis.

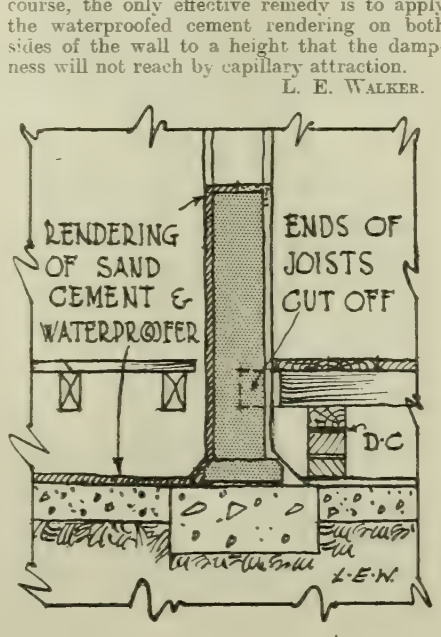
N. J. Aver.

Courses of Study in Building.

Sir,—I am anxious, in the event of my husband (a builder and contractor) ever losing his present foreman to be able to assist him in his business in case he should be unable to replace so trustworthy an assistant. Can you advise me as to what courses it would be best to study and at what particular institution? I should prefer to start with a correspondence course and finish with personal tuition. I should particularly wish to study buying material and construction. I have matriculated, so that may be of some assistance to me in getting accepted as a pupil at any of the various institutes.

Lady Reader.

Dampness in Floors.



[Reply to T. H., August 5.]

Sir,—"T. H." asks for suggestions which will enable him to overcome the smell that accompanies dampness in the floors and lower parts of the walls to his house, but it is more important to overcome the dampness which is the cause of the smell. As the dampness rises in the walls of the room to a height of about 18 in. above the floor, it is obvious that there is no horizontal damp-proof course, or, if one was originally provided, that it has perished. It also seems likely that the site concrete which should have been laid over the entire surface of the earth, under the floors, has been omitted

A layer of 4 in. of good concrete, finished with a 1 in. floating of waterproofed cement mortar should be laid over the surface of the ground under the floors, and the rendering of waterproofed cement continued up the faces of the walls to a height of at least 2 ft. above where the dampness shows. The walls should, of course, be prepared by removing the plaster, and hacking and well wetting the face of the brickwork. In the cases of the external walls, the dampness will dry outwards by evaporation, but if there are internal walls which must be rendered in this way upon both sides, the rendering should be taken up a little higher, say, 3 or 4 ft. above where the dampness at present shows, because the sealing of both surfaces may cause this dampness to rise higher by capillary attraction. I have applied this remedy in many cases, but have never known the moisture to rise above the level of the new waterproofed rendering carried to the height recommended.

When 4½-in. partition walls are required to be treated in this way, it is not a difficult matter to cut out a bend joint above the level of the dampness, half-way through the thickness of the wall. This cutting away should not be continuous along the whole length of the wall, but should be done in strips of about 3 ft., leaving 3 ft. between them. The intermediate strips are then dealt with after the portions previously cut out have been well cleaned and wetted and filled up with waterproofed cement and sand. When the whole length of the joint on one side of the wall has thus been dealt with, the remaining half of the bed joint can be cut away from the other side, and also filled up with waterproofed cement. In this way a complete horizontal damp-proof course will be inserted without any great labour or disturbance. This procedure is impracticable in the cases of walls thicker than 4½ in., and unless one is prepared for the almost prohibitive expense of inserting a new horizontal damp-proof course, the only effective remedy is to apply the waterproofed cement rendering on both sides of the wall to a height that the dampness will not reach by capillary attraction.

L. E. Walker.

Building Contract and Increased Cost of Materials.

Sir,—We have a case of a contract which we are about to settle up, for which the usual R.I.B.A. Form of Contract was employed, and which contained no clause dealing with rise and fall of prices of materials. Owing to the unprecedented state of the markets during the General Strike our bricks and lime cost us considerably more. Are we entitled to claim the extra cost of these materials, as before signing the contract such circumstances were entirely unforeseen and the like had never before been experienced. X. Y. Z.

*** Strikes and lock-outs are not valid excuses for non-performance of or delay in a contract, unless (as where the R.I.B.A. Form of Contract is used), there is an express condition in the contract to that effect. Nor, in the case of a lump-sum contract can a contractor claim remuneration for any extra outlay in plant or materials occasioned him by reason of strikes or lock-outs. In law, he is compelled to perform his contract, even if it results in a greater cost to him in consequence of strikes or lock-outs. Also, if he performance of his contract is rendered impossible, or impracticable, by unforeseen circumstances, against which he might have protected himself by additional terms and conditions in his contract, he would render himself liable for any damage caused thereby, to his employer.

In the case under consideration, the contractor is protected from any liability owing to strikes; but he is not entitled to any extra cost of materials due to the strike. His only course appears (from the particulars furnished) for him to represent his case to his employers in such a way that some equitable arrangement may be come to between them, as and by way of a concession—not as a right.—Ed.

Thatching.

[Reply to "Ignorant," July 29.]

Sir,—Good thatchers are rare to find, and I believe most of them are to be found in Norfolk and the Eastern Counties, from which they have to travel to distant jobs and lodge in the neighbourhood. According to the position of the job, it is likely to vary between six to eight pounds per square for labour and materials for good-class reed thatching. A. B.

Blisters on Wall.

Sir,—I shall be glad of advice in the following matter:—

A bathroom and adjoining W.C. walls and ceilings were well painted and enamelled pale blue (over old painted walls in good condition) three months ago. The partition wall is stoothed and plastered over laths. Three days after a heavy rainstorm, large and small blisters appeared on the W.C. side of the partition wall. When pierced, a quantity of yellow-coloured liquid ran out of these blisters, in one case almost filling an egg-cup. It was proved on investigation that rain had come in immediately over the W.C. ceiling (a slate having come off) and had found its way to the top of the partition wall. Also, the top of the ceiling in the roof was wet.

1. What made the blisters come in the painted wall?
2. Why was the liquid therein yellowy (evidence of green distemper on wall face)?
3. Why were there no blisters on the under side of ceiling?
4. Why should blisters be on w.c. side only? O. P. L.

Roof Insulation.

Sir,—Is there any up-to-date method of insulating the roof space of a house against loss or gain of heat by other method than the usual boarding and felt?

Inquirer.

THE BUILDING TRADE

BOUNDARIES, FENCES AND TREES—II.

We dealt in our last article with the simple case where there is a hedge with an artificial ditch on one side, but if there is a ditch on both sides, of course the presumption as to the ownership of the ditches cannot apply, and in the absence of other evidence the hedge will be owned by the owners of the land on either side as tenants in common (see per Lord Justice Kay in Lemmon v. Webb, 1894, 3 Ch. 1, citing an anonymous case, 2 Roll 255), but ownership can be proved by acts of ownership (Guy v. West 2 Selw. 1287) or by other evidence such as a conveyance, or even from an ancient document showing acts of ownership and produced from proper custody, as to which see Blandy-Jenkins v. Lord Dunraven (1899 2 Ch. 121).

One of the most usual pieces of evidence as regards the ownership of hedges is who has always exercised the right to top the hedge. As regards banks, it is said the property in a bank follows the ownership of the soil from which it is constructed (see Roscoe Nisi Prius Evidence), but this inference can be rebutted by affirmative evidence of ownership. A wall, in the absence of affirmative evidence, like a bank, follows the property of the soil on which it is erected, but evidence of repair would be evidence of the strongest kind of an act of ownership.

We are not dealing with party structures under the London Building Act, but in one of Mr. J. Douglas Scott's articles, recently published by us, where the author is dealing with the common law, it is stated that in the absence of other evidence the ownership of a wall can be determined by the piers or buttresses; if they are on one side only the wall belongs to the owner of the soil on which the buttresses stand, whilst in the case of a fence it will belong to the owner of the soil on which the supporting posts are erected. We are not aware of any actual legal decision to this effect, but the rule is clearly founded on commonsense, as well as law, for as these structures follow the property of the soil on which they are erected, the position of the buttresses and posts is evidence on this question.

Roads as Boundaries.

Where a road forms the boundary between two properties, there is a presumption that each owner owns the soil of the road *usque ad medium filum*, but this presumption can be rebutted. Thus, in Mappin Bros. v. Liberty and Co. (1903, 1 Ch. 118), Mr. Justice Joyce put the matter thus: "I suppose there is a presumption where persons own land by the side of a street that in the absence of evidence and knowledge of what the real facts are they must be taken to own the soil of the street *usque ad medium filum*, but of course that presumption is displaced, or rather, cannot be held to apply, where we have evidence and know all the facts as to the acquisition of the land," and he referred to Plumstead Board of Works v. British Land Company (1874, L.R. 10 Q.B. 16), where it was laid down that it is enough to rebut the presumption when there is anything to show the intention of the parties not to convey any part of the road. In Mappin's case the Court stated that the presumption was founded on a supposition that the proprietor of the adjoining land at some former period gave up to the public for passage all the land between his enclosure and the middle of the road (Doe v. Pearsey, 7 B. and C. 304).

Further on in the judgment in Mappin's case, this passage occurs: "As has been mentioned in argument, doubts have been expressed by various judges as to whether the presumption ever applies to houses (*sic*) in a town and as to whether it applies to a building estate. See per Lord Justice Cotton in Leigh v. Jack (1879 5 Ex. D. 264)." In this latter case, Lord Justice Cotton expressed the opinion that it was very questionable whether the presumption could ever extend to cases where land is sold in plots for building purposes even when the roads had actually been laid out, whilst as to the other point as to towns, we shall refer to the cases below. In Mappin's case the claim was to the soil of Regent Street *ad medium filum* under a lease entered into before the street was laid out. The Court held that from the Act under which the land was acquired and the lease had been granted it was to be inferred that there was no intention to pass the moiety of the street even if the Commissions had power at all to do so under the Act.

As to the point as to the application of the presumption to streets in towns the law seems a little uncertain. In Beckett v. Corporation of Leeds (1870 7 Ch. D. 421), it was questioned by the Court of Appeal whether the presumption had any application to a street in a town, but in Re Whites Charities (1898 1 Ch. 659), a judge of a court of first instance held that the presumption applied as much to streets in towns as to country highways. This decision was questioned again by a Judge of co-ordinate jurisdiction in London North Western Railway Co. v. Westminster Corporation (1902, 1 Ch. 269), a case which was carried to the House of Lords, where the decision was affirmed but this particular point did not arise. All that can be said is that, as in the Leeds case, in towns there is more likelihood of evidence being forthcoming to rebut the presumption.

As regards roads generally, the effect of the cases seems explained by a case Pryor *v.* Petre (1894, Ch. 11), where the Court of Appeal considered how the presumption as regards a road could be rebutted. In that case it was laid down that the law as to the presumption was correctly expressed in Berridge *v.* Ward (10 C.B.N.S. 400), "Where a piece of land which adjoins a highway is conveyed by general words the presumption of law is that the soil of the highway *usque ad medium filum*, passes by the conveyance even though reference is made to a plan annexed, the measurement and colouring of which would exclude it." Starting from that premise the Court had to consider the circumstances which would rebut it. The land in question abutted upon a lane which, although a highway, was very little used, and had not been metalled. The conveyance was of a farm and certain woods and the land was described with great minuteness by acreage and reference to the numbers in the ordnance map, and neither description would include any portion of the lane. The court pointed out that this in itself would not suffice to rebut the presumption, but it was held to be rebutted on the two grounds that on the ordnance map one of the woods conveyed bore a different number to the lane, and secondly there was a recital in the conveyance that before the deed was executed the timber should be valued, and this valuation had been made, but none of the trees in the lane, some 30 or 40 in number, had been included.

Subject to what we have said as to roads on building estates, the same presumption in the absence of evidence as to ownership applies to private roads (Holmes *v.* Bellingham (7 C.B.N.S. 329), but the fact that one of the owners of land abutting on a private way can only reach a portion of his property over that private way is not evidence rebutting the presumption, as the right may be an easement (Smith *v.* Howden (14 C.B.N.S. 398).

Rivers as Boundaries.

The same principles apply in the case of rivers. See Micklethwaite *v.* Newlay Bridge Company (33 Ch. D. 133), where the law was laid down as follows, by Lord Justice Cotton: "The rule of construction is now well settled, that where there is a conveyance of land even though it is described by reference to a plan and by quantity, if it is said to be bounded at one side either by a river or a public thoroughfare, then on the true construction of the instrument half the bed of the river or half of the road passes unless there is enough in the circumstances or enough in the expression of the instrument to show that it is not the intention of the parties." This statement must, however, be limited to non-tidal rivers. See below, Mellor *v.* Walmisley.

An example of how the presumption in the case of a river can be rebutted is furnished by the case Duke of Devonshire *v.* Pattinson (20 Q.B.D. 263). There the owners of a manor had in 1767 and 1846 conveyed to purchasers pieces of riparian land fronting a river, the bed of which formed parcel of the manor, and the grantees claimed the bed *usque ad medium filum*. It was, however, proved that before the granting of the earliest conveyance a fishery in the river fronting the lands in question had for a long time back been let from time to time to tenants of the lord of the manor as a separate tenement distinct from the riparian closes, and that at the time of the conveyance the fishery was so let under lease to tenants. Moreover, until the acts complained of in this action the grantees had never claimed or exercised the right of fishing over the bed of the river by virtue of any right in the soil or otherwise, whereas the owners of the manor and their tenants had always fished without interruption. In the circumstances the presumption was held to be rebutted. We are perhaps getting to swim in deeper water than we intended in these articles, and we need not follow this matter further, and we will return to dry land on the seashore in our next article in which we shall show that the rule of construction laid down above in connection with roads and non-tidal rivers, that where they are definitely defined as the boundary a difference in the measurements given or on the plan attached can be ignored, has no application to non-tidal rivers or the seashore.

The Sea-Shore.

It would be impossible here to discuss the law as to tidal rivers and the sea shore in any detail. As regards the fore-shore *prima facie*, the ownership is vested in the Crown (see Attorney General *v.* Emerson, 1891, A.C. 649), but this presumption can be rebutted by evidence of title. In that case the law was stated by the House of Lords thus: "It is beyond dispute that the Crown is *prima facie* entitled to every part of the shore between high and low water mark, and that a subject can only establish a title to any part of that fore-shore by proving an express grant thereof from the Crown, or by giving evidence from which such a grant, though not produced, will be presumed." In that case, proof of the ownership of a several fishery over part of the fore-shore was held to rebut the presumption.

In Lord Fitzharding *v.* Purcell (1908, 2 Ch. 139), documentary evidence commencing with a charter of Henry II. was held also to rebut the presumption. In Mellor *v.* Walmisley (1905, 2 Ch. 164), a piece of land had been conveyed to the plaintiffs, the property being described as "on the sea shore," the west boundary being the seashore, the land being defined by measurements, and a plan attached. The measurements and plan showed a narrow strip of land some 10 feet in width, intervening

etween the property thus indicated and a avy line on the plan marked "seashore." here had been an accretion of land since ne date of the conveyance, and the efendants who derived title from the same rantor as did the plaintiffs, had erected osts and rails outside the narrow strip of and, thus excluding the plaintiffs from ccess to the shore. The plaintiffs claimed his land as their property, with free access o the sea from their premises. The princial point in the action was whether the arrow strip belonged to the plaintiffs under he conveyance, as it was not questioned hat the accretion of soil would belong to he person who owned the strip of land.

The Court of Appeal held that the word seashore" must be taken to mean the fore-shore" in its legal sense, *i.e.*, the and between medium, high and low water narks, and that on this point entries made by a deceased surveyor in his field book n the course of a survey in which he was rofessionally engaged could be accepted as vidence. This evidence placed the line of rdinary high water at the outer edge of he narrow strip of land, but although the neasurements excluded this narrow strip he majority of the Court of Appeal held hat as the conveyance stated that the roperty was situated on the seashore and hat the western boundary was the seashore, he predecessor in title of the defendants vas estopped from saying that the whole of he land intervening between the western boundary as described by the dimensions and plan was anything else than seashore. The Court below had held that the description referring to the seashore was in the conveyance, was adequate by itself, and the dimensions could be excluded; but Lord Justice Vaughan Williams pointed out that the ordinary rule that when in a conveyance there are words of description giving a sufficiently certain definition of what is conveyed inaccuracy of dimensions or of plans as delineated will not affect what is sufficiently defined had no application here, as in this case the dimensions were part and parcel of the description itself, and the words were not an inaccurate statement of that which had already been certainly defined; but the majority of the Court held that although the strip of land was not conveyed to the plaintiffs for the defendants predecessor in title having stated in the conveyance that the land conveyed was on the seashore and bounded on the west by the seashore, the defendants were estopped from saying that the land intervening was anything else than seashore. Lord Justice Romer, however, considered that the strip of land actually passed by the conveyance.

The following observations in this case by Lord Justice Stirling are useful as explaining the principles we have been considering: "If the boundary had been a road or an inland river, this strip of land, if vested in the plaintiff's predecessor in title, would *prima facie* have passed by the conveyance, notwithstanding that the measurements of the plots would exclude it (Beckett *v.* Leeds Corporation *ubi sup*, and Micklethwaite *v.* Newlay Bridge Company *ubi sup*), but there is no case which decides that that rule applies to conveyances of land bounded by a tidal river or by the seashore, indeed. Attorney General of the Straits Settlement *v.* Wemyss (13 App. Cas. 192) seems to point the other way."

Sea-front Development, Worthing.

Important proposals for the improvement of Worthing front are foreshadowed in town-planning schemes which the Corporation have provisionally approved. It is proposed to extend the parade past Splash Point to link up with the New Parade, and beyond to the main Brighton road. No figures are given for the cost of the improvement, but the plans provisionally passed prescribe the building line in the new road which will have to be laid out.

DISTRICT SURVEYORS IN LONDON

Since we gave the last list of District Surveyors in London (see *The Builder* Map of London, January 14, 1927) several changes have taken place, and we now give a new list of addresses, which has been supplied to us by the District Surveyors' Association, the telephone numbers being given in parentheses:

Battersea.—Mr. Horace Cubitt, 233, Lavender Hill, S.W.11. (Battersea 4218.)

Bermondsey.—Mr. A. C. Meston, Bank Chambers, Tower Bridge, S.E.1. (Hop 0558.)

Bethnal Green.—Mr. F. E. Mennie, 311, Cambridge-road, E.2. (Avenue 3187.)

Camberwell.—Mr. A. P. Stokes, 173, Herne Hill, S.E.24. (Brixton 3445.)

Chelsea.—Mr. T. S. Hosking, 4, Sydney-street, S.W.3. (Kensington 2115.)

City of London (East and West).—Mr. John Todd, 7, Camomile-street, E.C.3. (Avenue 8711.)

Clapham.—Mr. W. Grellier, 188a, High-street, S.W.4. (Holborn 5523.)

Deptford.—Mr. A. E. Mayhew, 329, New Cross-road, S.E.14. (New Cross 0890.)

Finsbury.—Mr. John Dovaston, 379, St. John-street, E.C.1. (Clerkenwell 9232.)

Fulham.—Mr. W. H. Rogers, Broadway House, The Broadway, S.W.6. (Western 2390.)

Greenwich.—Mr. A. A. Fillary, Borough Hall, Royal Hill, S.E.10. (Greenwich 0155.)

Hackney East.—Mr. H. R. Chanter, Westminster Bank Chambers, 20, Amhurst-road, E.8. (Clissold 7302.)

Hackney West.—Mr. W. G. Whincop, Westminster Bank Chambers, 20, Amhurst-road, E.8. (Clissold 7685.)

Hammersmith.—Mr. A. L. Woodward, 13, Queen-street, W.6. (Riverside 1922.)

Hampstead.—Mr. J. E. Mundell, 305, Finchley-road, N.W.3. (Hampstead 8794.)

Holborn.—Mr. W. G. Perkins, 11, Gray's Inn-square, W.C.1.

Islington.—Mr. E. W. Lees, 407, Holloway-road, N.7. (North 1561.)

Kensington North.—Mr. G. Tolley (Interim), 96, Westbourne-grove, W.2. (Park 2799.)

Kensington South.—Mr. H. A. Legge, 113, Earl's Court-road, S.W.5. (Western 4739.)

Lambeth North.—Mr. P. J. Black, 69, Kennington Oval, S.E.11. (Reliance 2185.)

Lambeth South.—Mr. F. P. Watson, 365, Norwood-road, S.E.27. (Streatham 6370.)

Lewisham East.—Mr. E. A. Young, 155, Rushey-green, S.E.6. (Lee Green 1507.)

Lewisham West.—Mr. A. H. Verstage, 1, Waldram-road, Forest Hill, S.E.23. (Sydenham 1938.)

Paddington.—Mr. G. Tolley, 96, Westbourne-grove, W.2. (Park 2799.)

Poplar.—Mr. C Kennard, 135, Bow-road, E.3. (East 5051.)

St. Marylebone East.—Mr. B. Greig, 1, Newman-street, W.1. (Museum 0681.)

St. Marylebone West.—Mr. H. T. Bromley, 117, Crawford-street, W.1. (Ambassadors 9777.)

St. Pancras North.—Mr. H. E. Watkinson, 272, Kentish Town-road, N.W.5. (Hampstead 1626.)

St. Pancras South.—Mr. H. H. Young, 14, Percy-street, W.1. (Museum 1867.)

Shoreditch.—Mr. C. C. Knowles, 124, Shoreditch High-street, E.1. (Central 1455.)

Southwark.—Mr. R. H. J. Mayhew, 14-16, New Kent-road, S.E.1. (Rodney 3393.)

Stepney East.—Mr. H. N. Kerr, 1, West Arbour-street, Commercial-road, E.1. (East 1109.)

Stepney West.—Mr. F. W. C. Barker, 130, Whitechapel High-street, E.1. (Avenue 7480.)

Stoke Newington.—Mr. W. G. Whincop (Interim), 171, Church-street, N.16.

Wandsworth East.—Mr. A. G Morrice, 1, Drewstead-road, S.W.16. (Streatham 1186.)

Wandsworth West.—Mr. P. Ion Elton, 35, High-street, S.W.18. (Battersea 4537.)

Westminster East.—Mr. O. C. Hills, 60, Haymarket, S.W.1. (Gerrard 4553.)

Westminster West.—Mr. C. W. Surrey, 9, Woodstock-street, W.1. (Grosvenor 3088.)

Westminster South.—Mr. L. A. D. Shiner, 34, Buckingham Palace-road, S.W.1. (Victoria 5386.)

Woolwich North.—Mr. T. P. Tinslay, 21, William-street, S.E.18. (Woolwich 1364.)

Woolwich South.—Mr. E. A. Young (Interim), 21, William-street, S.E.18. (Woolwich 1364.)

BUILDERS' BENEVOLENT INSTITUTION

The 80th Annual General Meeting of this Institution was held on July 26, at 34, Russell-square, W.C.1, when the chair was occupied by the President, Mr. F. M. May, F.I.O.B. The Annual Report and the audited account of income and expenditure for the year ended July 7, 1927, were received and adopted. The Committee of Management, in submitting the Annual Report, recorded their sincere gratitude to Mr. F. M. May for the great service he had rendered to the Institution as its President during the past year. The generous response to his appeal had enabled the Committee again to grant gifts to the Pensioners at Christmas and Midsummer of £5 each. The Pensioners had all expressed their thanks in terms which showed how much these gifts were needed and how greatly they were appreciated. The grateful thanks of the Committee were also accorded to the subscribers and donors, by whose generous support the Committee had been able to assist every eligible candidate during the past year, and sincerely trusted they might be permitted to continue to do so. No application was considered until it had been personally investigated and reported upon by a Member of the Committee. The Committee deeply regretted to record the loss the Institution had sustained by the death of the late Mr. A. Ritchie, who was a Member of the Committee for the past 30 years. The Committee were pleased to report that Mr. Frank J. Walton (Messrs. Ford & Walton, Ltd.) had kindly consented to act as President for the year 1927-28, and they appealed to all friends of the Institution to support him at the Annual Dinner in November next.

Mr. Frank J. Walton, F.I.O.B. (Messrs. Ford & Walton, Ltd.), was elected President for the ensuing year. Mr. A. B. H. Colls, F.I.O.B. (Messrs. Trollope & Colls, Ltd.), was re-elected Hon. Treasurer.

The following Members of the Committee of Management, who retired by rota, were re-elected:—

Mr. G. J. Aldous, M.C., A.I.O.B. (Messrs. F. & H. F. Higgs, Ltd.).

Mr. G. R. Holland, F.I.O.B. (Messrs. Holland & Hannen and Cubitts, Ltd.).

Mr. H. T. Holloway, F.I.O.B. (Messrs. Holloway Bros. (London), Ltd.).

Sir Walter Lawrence, J.P., F.I.O.B. (Messrs. Walter Lawrence & Son, Ltd.).

Sir J. W. Lorden, F.I.O.B. (Messrs. W. H. Lorden & Sons, Ltd.).

Mr. F. A. Minter (Messrs. F. G. Minter, Ltd.).

Mr. G. Perry Nash, F.I.O.B. (Messrs. Hall, Beddall & Co., Ltd..).

Mr. J. C Nicholson (Messrs. Jenson & Nicholson, Ltd.).

Sir Frederick G. Rice, F.I.O.B. (Messrs. Rice & Son).

The following were elected Members of the Committee:—

Mr. M. W. Godson, A.I.O.B. (Messrs. G. Godson & Sons, Ltd.).

Mr. B. P. Greenwood (Messrs. Holliday & Greenwood, Ltd.).

Mr. Stanley G. Nash, A.I.O.B. (Messrs. Hall, Beddall & Co., Ltd.).

Major Leslie Shingleton (Messrs. Leslie & Co.).

Mr. H. S Ward, F.C.A. (Messrs. R. J. Ward & Co.) and Mr. Ben Carter (Messrs. Stephens & Carter, Ltd.) were elected Hon. Auditors.

NEW BUILDINGS IN LONDON

Merton.—Sub-Station.—The Clerk of the Merton and Morden U.D.C. is to make application to the Ministry of Health for permission to sell a site in Green-lane to the Wimbledon Corporation, on which the latter propose to erect an. electricity sub-station.

Mount Pleasant.—Post Office Buildings.—Provision for the commencement of the new building scheme at Mount Pleasant has been made in the 1927 estimates; and the demolition of the old buildings is to be undertaken as soon as possible after Christmas. His Majesty's Office of Works have charge of the scheme.

Carshalton.—Housing Scheme.—The Unit Constructions Co., Ltd., of Cloak-lane, E.C.4, are the contractors for the Urban District Council's housing scheme of 140 houses. The architect is Mr. Hugh Macintosh, 1, Imperial Buildings, East Croydon.

Croydon.—Cinema.—A new super-cinema—to the designs of Mr. Robert Cromie, F.R.I.B.A., 73, Edgware-road, W. 2—is to be erected at Croydon for Mr. I. Davis, of Pavilions, Ltd., Oxford-street, W.1. No contract has yet been let.

Ealing.—Housing Scheme. — At a recent meeting of the Ealing Town Council, the Borough Surveyor, Major Leslie Roseveare, was instructed to arrange the lay-out of the Framfield housing estate in accordance with plans submitted, to provide for equal numbers of parlour and non-parlour houses and equal numbers of two-bedroom and three-bedroom flats.

Great Marlborough-street.—Office Block.—Mr. Gordon Jeeves, of Hanover-square, has planned an elevation for the new display rooms and offices of the National Radiator Co., Ltd. The site selected for the new building is at the corner of Gt. Marlborough-street and Argyll-street, and provides for a seven-story building in granite. The cost of the work will be in the region of £75,000, and the contractors, Messrs. Perry & Co. (Bow), 56, Victoria-street, Westminster, are commencing work immediately.

Lewisham.—Cinema.—Messrs. Granger & Leathart, of 7, John-street, Adelphi, have prepared plans for a new super-cinema for Councillor Hallinan, to be built on a site between Lewisham and Catford. No contract has yet been let.

Muswell Hill.—Church Hall.—Plans have been prepared and tenders are now being invited by Mr. F. Stanley Griffith, F.S.I., 17, Bedford-row, W.C.1, for a church hall at Tetherdown, N.10, for the Trustees of the Muswell Hill Congregational Church.

Pall Mall.—Club Reconstruction.—Alterations are to be carried out to the Athenæum Club in Pall Mall, which will involve the construction of thirteen members' bedrooms, and considerable alterations to the ground floor and basement. Sir Reginald Blomfield, R.A., is in charge of the external alterations, but the supervision of the interior reconstruction is in the hands of Messrs. Collcutt & Hamp, of 126, Wigmore-street, W.1.

Sutton.—Secondary School.—Plans have been passed by the Urban District Council for a new secondary school for boys, in Manor-lane, for the Surrey Education Committee. The architects are Messrs. Jarvis & Richards, of 60, Tufton-street, S.W.1, and the building contract has been let to Grace & Marsh, of Tamworth-road, Croydon.

Upminster.—Telephone Exchange.—The Commission for His Majesty's Office of Works propose to erect a new telephone exchange at Upminster. Tenders are now being invited.

Victoria.—Cinema Reconstruction.—Plans for the reconstruction and enlargement of the Biograph Theatre, 47-48, Wilton-road, Victoria, have been prepared by Mr. George Coles, F.R.I.B.A., 40, Craven-street, W.C. 2. The proprietor is Mr. Pearl, and the building contract has been let to Messrs. S. E. Little, 569a, High-road, Tottenham.

Walthamstow. — Housing Scheme. — Walthamstow Council are asking the Ministry of Health for sanction to borrow £25,994 for the erection of 48 additional houses at Higham Hill, remaining out of the original scheme for 198 houses. Plans have been prepared by Mr. G. W. Holmes, A.M.I.C.E., the Council's Surveyor.

Wimbledon.—Cinema.—Mr. Robert Cromie, F.R.I.B.A., 73, Edgware-road, Marble Arch, London, W.2, is the architect for the modernisation of the Elite Picture Theatre, Wimbledon. The work will include increasing the capacity of the balcony, remodelling the entrance hall, staircases, tea lounges and operating enclosure, and redecoration and re-equipment. The proprietor of the theatre is Mr. E. Carreras. No contracts have yet been let for the works.

Ilford.—Swimming Baths.—The Borough Engineer, Mr. H. Shaw, M.B.E., M.Inst.C.E., has prepared plans for the erection of two swimming baths, ten slipper baths, and eight vapour baths, which the Council recommend be proceeded with. The estimated cost is £57,000.

Fulham.—Cinema.—Plans are going forward for the new "Piazza" Cinema to be erected in Fulham, to the plans of Mr. Clough Williams-Ellis, of 22B, Ebury-street, S.W.1. The cinema is arranged on the "fan" lay-out system and is planned to seat about 2,000 persons.

King-street Hammersmith. — Cinema. — Messrs. Granger and Leathart, of 7, John-street, Adelphi, W.C.1, are the architects for a scheme which will involve the reconstruction of the Blue Halls, Hammersmith. One of these halls is to be demolished, and the whole built into one large theatre to seat about 3,000 persons. The promoter of this scheme is Mr. A. E. Abrahams, of 25, Shaftesbury-avenue, W.1. No contract has yet been let.

Incorporated Church Building Society.

At the meeting of the Incorporated Church Building Society, held at 7, Queen Anne's-gate, Westminster, on Thursday, July 21, the Hon. Sir E. P. Thesiger, K.C.B., in the chair, grants were made towards building new churches at:—Diana Powis, £75; Fairbourne, S. Cynon, £175; Rhosddu, S. Margaret, £150; Thornton Heath, S. Jude, £150; Treboeth, St. Alban, £200.

Towards enlarging or repairing the churches at:—Beaumaris, S. Mary, £75; Brockley, S. Saviour, £60; Bromley-by-Bow, S. Andrew, £30; Hayscastle, S. Mary, £20; Hinton Blewett, S. Margaret, £50; Hornsey, S. Peter, £25; Llangammarch Wells, S. Cadmarch, £30; Portsea, All Saints, £30; Shepherd's Bush, S. Thomas, £50; Upchurch, S. Mary, £50; Wesham, Christ Church, £100.

Grants were also made from the Mission Buildings Fund as follows:—Indian Queens, S. Francis, £75; Plumstead, S. James, £40.

The following grants were also paid for works completed at:—Beedon, S. Nicholas, £15; Bishopston, S. Teilo, £100; Blackpool, S. Stephen, £400; Corby, S. John the Evangelist, £50; Foleshill, S. Lawrence, £75; Grimoldby, S. Edith, £25; Hadleigh, S. Mary, £50; Haggerston, S. Paul, £50; Hanney, West, S. James, £40; Hapton, S. Margaret, £150; Haslingden Grane, S. Stephen, 250; Leyton, S. Paul, £150; Limehouse, S. John, £25; Stubbins, S. Philip, £150.

In addition to the above, £1,118 was paid from Trust Funds towards repair to 28 other churches. With this meeting the Society has granted over £5,000 during the current year. Funds are now urgently needed to continue and extend its work.

British Institute of Industrial Art.

An exhibition showing "Modern Developments in Studio and Trade Pottery" will be held in part of the North Court of the Victoria and Albert Museum from September 29 to October 29. Admission will be free.

WORKMEN'S COMPENSATION: PARTIAL DEPENDENCY

The House of Lords has given an important decision on what constitutes partial dependency under the new provision inserted in the Act of 1923 which is now Section 4, sub-section (2) of the Consolidating Act of 1925. The sub-section is as follows: "A person shall not be deemed to be a partial dependant of another person unless he was dependent partially on contributions from that other person for the provision of the ordinary necessaries of life suitable for persons in his class and position."

The case in question is Welsh Navigation Steam Coal Company, Ltd., *v.* Evans and Another (*The Times*, July 15; *Weekly Notes*, July 28), and the facts were these. The deceased man was a coal-miner, 22 years of age, whose average weekly earnings were £1 13s. 1d. He lived with his father and mother and a brother, and the father's earnings were £4 4s. 9d., and those of the brother £3 17s. 9d., and the father had savings of £500. The deceased had been in the habit of handing all his wages to his mother, who paid for his keep and allowed him 5s. a week as pocket-money. The County Court Judge had held that no dependency was proved. The following passage from the Judge's opinion was quoted in the House of Lords: "In this case the note of the evidence is very meagre because it was impossible to get definite answers from the deceased's father and mother. The conclusion I came to was that the parents, who were very thrifty people, had always saved money, that they saved all the money obtained from each son except what was necessary to keep the son in food, clothes, and pocket-money, and under the circumstances the parents could not be said to be in any way dependent upon the contributions of the deceased son for the provision of the ordinary necessaries of life suitable for persons in their class and position." The Court of Appeal reversed this decision, referring in particular to two cases, Peart *v.* Bolkow Vaughan & Co. (1925, 1 K.B. 399), and Kennedy *v.* Horden Collieries (1925, 2 K.B. 438), which will be found noted in our seventh article on Workmen's Compensation in February 19, 1926.

From the brief report at present available it appears that the House of Lords indicated in the judgment of Lord Dunedin (the only judgment contained in the reports) that those decisions were approved, though certain dicta were questioned, and when the case is fully reported we shall discuss in our Legal Section those cases as explained in the present decision, but at present we can only give the decision in this case. The House of Lords reversed the decision of the Court of Appeal and restored that of the County Court Judge.

Lord Dunedin is reported as saying that the actual expenditure was a *prima facie* guide, and no meticulous distinction was to be drawn between an absolute necessary and an article of comfort or luxury; but the "ordinary necessaries of life" was a well-understood expression, indicating food, clothing, and shelter, and the necessary concomitants thereto; but to extend it to saving, or what was the same thing, insurance, was to do violence to the expression. The evidence showed that this family had enough for the necessaries of life without any contribution from the deceased, and thus there was no partial dependency.

It is, however, important to note one further observation in the judgment. Counsel had suggested that if judgment was given for the appellants, the employers, that would mean that wherever there was a capital sum invested which represented savings, then so long as that capital sum remained unexhausted there could be no contribution. Lord Dunedin characterised this as not a common sense suggestion, and pointed out that what had to be regarded was the family income and income did not represent the touching of capital.

(For rates of wages in the Building Trade in Scotland see page 262.)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

Following is a list of abbreviations:—Borough Surveyor, B.S.; Borough Engineer, B.E.; District Surveyor, D.S.; Clerk, C.: Town Clerk, T.C.; County Engineer, C.E.; County Surveyor, C.S.; County Architect, C.A.; Surveyor, S.; Engineer, E.; Borough Architect, B.A.; Architect, A.

ESTIMATING ON RIGHT LINES

Everyone whose business it is to quote for building work should master the principles upon which estimating is based. These principles are clearly explained and illustrated in

'HOW TO ESTIMATE'

by J. T. REA,

a unique and invaluable work which is not excelled in thoroughness or in scope by any similar book known.

Fourth edition (now ready). 540 pages. Price 15s. net (by post 15s. 9d.). Containing thousands of prices and hundreds of examples of analysis, showing how a builder can make up rates for himself. In view of the difficulty of fixing standard prices under present conditions, the author has included an important series of Adaptation Tables and Percentages (corrected to February, 1927), *which show how rates may be adjusted to meet variations at any time.*

Before purchasing any other book on this vitally important subject, you are invited to inspect this—the standard work which is in use by over 30,000 builders.

A Copy will be sent by return, and your Remittance refunded if the Book does : : not satisfy your requirements : :

EXETER TOWN-PLANNING SCHEME.

"With a view to preserving the existing character and protecting the existing features of the locality on account of its special architectural, historic and artistic interest," Exeter City Council has made application to the Ministry of Health for authority to prepare a town-planning scheme. The area proposed to be dealt with embraces 117 acres, representing, roughly, the old portions of the city. The inquiry into the application was conducted at Exeter on Friday, July 22, by Mr. Benson Greenhall, and Colonel S. Stallard, the Divisional Officer of the Ministry of Transport, was among those present.

The Town Clerk, Mr. H. Lloyd Parry, in presenting the case for the Council, said no objections or criticisms had been offered to the proposals with the exception of a communication from the Southern Railway Company. The Council's recommendation was unanimous. The present application was merely for authority from the Ministry to prepare a scheme, and, if that were granted, the details would be submitted later. There was no area in the country which required to have its existing character preserved and its existing features protected more than this central portion of Exeter. The High-street was famous for its beauty and its architectural, historic and artistic interest. There were a number of buildings of the Tudor period in the main streets, while some of the churches abutting on the main streets were several centuries older than the Tudor. There were within the area the Cathedral Close, surrounded by its mediæval buildings, the Guildhall, the beautiful Tucker's Hall, Bampfylde House, one of the most delightful specimens of Jacobean architecture in the country; the Chevalier House, an old Tudor building; and the old Castle, with its beautiful grounds. On the eastern side of the area there was Southernhay, one of the most beautiful features of the city, with its long line of stately Georgian buildings, which were reproduced also in Dix Field, Bampfylde-crescent and Bedford-circus. The area of the scheme also included the main approaches to the centre of the city, Sidwell-street, High-street and Fore-street, and the more modern Queen-street, which had buildings which presented some beautiful façades. Then, again, there were the very quaint old houses in Exe Island. The Council and the citizens generally had been apprehensive for some time lest some owner of premises in the main streets or streets adjoining should demolish his building and erect some structure that would entirely destroy the beauty of the surroundings. It was with the object of avoiding this that the City Council was desirous of securing powers which a town-planning scheme such as this would give—powers to give it some control over the elevation and height of new buildings that were erected, and some protection against the erection of factories or other industrial buildings that would be out of character with the surroundings. With regard to the Southern Railway Company's objection, that was based on the grounds that the Company's property was acquired under statutory powers for the purpose of its undertaking, and the Company further stated that it proposed to develop, in connection with the latest suggestions, the alteration and rebuilding of Queen-street Station, the plans for the construction of which were already well in hand.

The City Council was delighted to hear that the Company were preparing such plans, but he suggested that this was not the stage at which to exclude the property of the railway company. The proper occasion to consider and to settle that objection would be when the Council had prepared its preliminary scheme. He had no fear whatever that they would come into conflict with the railway company; indeed, he had every confidence that the plans which the latter were preparing would be such as the City Council would be able to approve.

PROPOSED NEW BUILDINGS & OTHER WORKS*

IN these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owners taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations: T.C. for Town Council; U.D.C. for Urban District Council; R.D.C. for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; B.C. for Borough Council; P.C for Parish Council; M.H. for Ministry of Health; M.T. for Ministry of Transport; C.B. for County-Borough; B.E. for Board of Education; M.A.B. for Metropolitan Asylums Board; and M.W.B. for Metropolitan Water Board.

FOLLOWING is a list of abbreviations:—Borough Surveyor, B.S.; Borough Engineer, B.E.; District Surveyor, D.S.; Clerk, C.; Town Clerk, T.C.; County Engineer, C.E.; County Surveyor, C.S.; County Architect, C.A.; Surveyor, S.; Engineer, E.; Borough Architect, B.A.; Architect, A.

BASFORD.—Approval has been given by Notts. C.C. to recommendation that as existing secondary school site at Basford was insufficient for two schools and playing fields, a site of 6* acres between St. Albans-rd. and Brooklyn-rd. offered for sale by the Duke of Newcastle at £2,770 be purchased.—Notice received from E.C. of intention to provide new school accommodation for about 1,000 children of the parish of Colwick and Carlton.

BECKENHAM.—The U.D.C. reported the passing of the following plans: 2 houses in South Eden Park, 2 houses in Beckenham-pl. Park, 6 houses in Kelsey-way, a house in Hayes-way, 2 houses in Birkbeck-rd., 2 houses in Overbury-av., 2 houses in Southend-rd., a house in Westmoreland-rd.

BEXHILL.—The following were among the plans passed by the Council: shop premises, Holliers-hill, submitted by G. H. Gray, on behalf of Mr. Hoare; detached house, Cooden-dr., by Stevens & Sons, for Mrs. J. M. Reynolds; pair of semi-detached houses, Haddocks-hill, by J. E. Maynard, for S. Carey; detached house, Cooden-dr., by J. E. Maynard, for J. M. Mallett; detached house, Cooden-dr., by J. E. Maynard, for S. A. Springbett.

BOSTON.—The R.D.C. has decided that the premises in the Market-pl., formerly belonging to Messrs. J. H. Small & Son, drapers, and recently acquired by Alderman Charles Day, be taken over for use as their Council Chamber and office.

CHERTSEY.—At the meeting of the U.D.C. the Housing Committee recommended that 50 houses be erected on the site adjoining Courland, Addlestone.

CHICHESTER.—The City Magistrates have approved the plans for extensive alterations to the Exchange Theatre.

COLCHESTER.—Sanction to loan for £1,286 for erection of public sanitary conveniences at the parking place at St. John's-st. has been received from the Ministry of Health. Ministerial approval has also been received by the Housing Committee to the proposal to proceed with the erection of 70 houses on the Ipswich-rd. site, and sanction given to the loan of £29,750 in respect of buildings, and £2,900 in respect of roads, sewers and lighting.

COVENTRY.—It is understood that reconstruction of the Opera house, Coventry, will shortly be carried out.

DARLINGTON.—Plans approved by the T.C. were:—J. E. Chilton, two houses, Salters-av.; bungalow, two houses, Geneva-rd. East, Coniscliffe-rd.; H. 9. Richardson, two bungalows, North-rd., two houses, North-rd.

DARLINGTON.—It was reported at the Council meeting that it had been decided to accept, subject to the sanction of the Ministry, the offer of £112 10s. per acre for 41.25 acres of land for a factory at Cockerton (instead of for 56.670 acres originally agreed to be acquired).

DEWSBURY.—The following plans were approved: Fearon & Co., alterations to premises, Huddersfield-rd.; the trustees of the Thornhill Wesleyan Methodist Church, primary school, Chapel-lane; A. C. Smith, dwelling-house, Bywell-rd.; the London & North-Eastern Railway Co., G.N. section, petrol storage, plant, Railway-st.; C. Howgate, dwelling-house, Claremont-rd.; Parker & Hazzlewood, shop premises, Queensway; the Dewsbury & West Riding Permanent Building Society, new premises, Church-st.; J. Crossley, jun., 8 dwelling-houses, Bywell-rd.; J. Crossley, jun., two dwelling-houses, Commonside, Crankenedge; Brook Bros., 4 lock-up garages off Slaithwaite-rd., A. Lister, motor garage, 794, Huddersfield-rd., Ravensthorpe; L. Firth, petrol storage plant and pump Hartley-st.—The committee inspected various proposed sites for the erection of further houses. It was resolved that, subject to the requisite approval being obtained from the Ministry of Health, the site at Laithe Croft, Earlsheaton, be approved as building sites for the erection of 150 houses, and that the town clerk be instructed to take all steps necessary to obtain the requisite approvals.

EASTBOURNE.—The T.C. has decided to invite fresh tenders for the 40 houses to be erected on the Hutment site, Mr. Absalom having withdrawn his tender.

ETON.—The R.D.C. has approved plans for the following buildings:

Stoke Poges: house in Slough-rd. for Dr. F. Brickwell, and 7 houses for E. H. Stiles.

Burnham: 2 houses in Dorney-rd., for Chennells Bros.; house for F. E. Cullimore; house in Cippenham Green-la. for H. S. Wood; 21 houses in Royston-way, for G. C. Smith; and 6 at Huntercombe for Chennells Bros.

Iver: house in Thorney-la. for W. J. Irvine, 6 houses in New-rd. for L. and F. Chadwell, and house in Thorney-rd. for P. A. Howe.

Farnham Royal: 12 houses in New-rd. for Chennells Bros.; and 100 houses on Farnburn Garden City Estate, for Otways.

Boveney: house for G. E. Mumford.

Langley: 4 houses in Slough-rd. for Mansell and Stevens.

FARNHAM RURAL.—Plans were approved by the Farnham Rural District Council as follows:—Additions to Amesbury School, Hazel-grove, Shottermill, Lt.-Col. C. L. Macdonald; house, Rowledge, Mrs. A. Pennington; house, Ash Hill-rd., Ash, Mrs. C. F. Hawkins.

FELTHAM.—A Salvation Army hall is to be built at Feltham, Middlesex.

FULBOURN.—The Isle of Ely C.C. has, with reference to the proposed extension of the Mental hospital, agreed to the erection of the three pairs of houses, and also concurred in the provision of laundry machinery (£1,275), and engineering plant for heating and electric light (£24,000).

GUILDFORD.—The R.D.C. have agreed to consider a loan for the purchase of building sites at Albury and Merrow, and recommend that application be made to the Ministry of Health for sanction to borrow £800.

GUILDFORD.—The T.C. has accepted a motion that steps be taken to prepare a scheme for the provision of an Assize Court in Stoke Park, and to present a report as to the cost, and the contribution the county would be prepared to make.

HALIFAX.—No opposition was offered at a Ministry of Health inquiry at Halifax into the Corporation's application for powers to borrow £950 for conversion of the large swimming bath at Woodside Baths into a hall for four months during the winter.

HENDON.—Council are asking sanction for a loan of £64,629 for an isolation hospital.—U.D.C. propose to erect 320 houses at Clitterhouse-la., Cricklewood.

KIDDERMINSTER.—Plans were submitted to the R.D.C. as follows: House in Whitehall-rd. for A. C. Stone; house in same road for F. Fehrenbach.

KNARESBOROUGH—The Knaresborough and District Conservative Association has unanimously decided to purchase Byrnand House, in York-pl., together with the house adjoining, for the sum of £1,600. The work of reconstruction as association premises is to be put in hand forthwith.

LANCASTER.—Plans for the new silk yarn factory for Messrs. J. Nelson & Sons, Valley Mills, Nelson, to be erected just beyond the Lancaster borough boundary by the Lunesdale Rural District Council have been approved.

LEEDS.—Sanction has been received from the Minister of Health to the borrowing of the following sums:—£27,580 for road works and £6,245 for sewers in connection with the widening of Scott Hall-rd. Application is to be made to the Minister of Health for sanction to the borrowing of the following sums: £3,523 for the widening of a portion of York-rd. between Seacroft Hospital entrance and Foundry-lane: £9,000 in connection with the acquisition of land off Stanningley-rd., Bramley, for housing purposes.

LEWES.—East Sussex C.C. proposes to purchase land at the rear of Castlegate House, and within the precincts of the famous Lewes Castle, for the erection thereon of a building to provide additional office accommodation, and to connect this building with the County Hall.

LINDSEY.—The following expenditure was authorised by the County Council: Road widening at Torksey, £1,250; road improvement at Gowts Bridge, Ingoldmells, £2,000; road improvement at Wragholme, £2,500; purchase of elementary school site at Cleethorpes, £2,020; erection of new school, Cemetery-rd., Scunthorpe, £18,850, in lieu of £15,500 previously authorised; and erection of isolation hospital at Brumby, £24,150, in lieu of £23,000 approved by the Council on October 29 last.

LONDON (CLAPHAM).—L.C.C. are to erect a secondary school at Clapham Common at £24,000.

LONDON (ISLINGTON).—B.C. received formal sanction of L.C.C. to brorowing of £32,500 in respect of paving works in Camden-rd., Isledon-rd., and Tollington-rd.

LONDON.—Christ Church Vicarage, Kew-rd., is to be practically rebuilt next month at a cost of £1,500.

LOUGHTON.—At the U.D.C. meeting it was reported that the Ministry had sanctioned the loan of £700 for the purchase of land in Englands-lane for a housing site, and that the clerk had applied to the Midland Bank for the loan.

LURGAN.—Plans for the erection of 11 new houses under the Housing Acts were submitted and approved of. Mr. W. R. Rutherford, town surveyor, remarked that he understood the Irish Land Trust were proceeding with plans for erecting 12 ex-Service men's houses on the Waringstown-rd., under the Sailors' and Soldiers' Housing Scheme.

NEWHAVEN.—It was decided by the U.D.C. to make application to the Ministry of Health to the granting of the subsidy in respect of a further 30 houses, to be commenced by private enterprise before March 31 next. The following plans were approved: for a pair of bungalows at Second-av., submitted by Mr. O. J. Hockley; and for a new entrance to the Crown Inn, submitted by the Rock Brewery, Ltd.

PLYMOUTH.—The R.D.C. have resolved that application be made to the Minister of Health for sanction to borrow the sum of £6,000, for the provision of a small-pox hospital at Sparkwell, Devon.

PLYMOUTH.—The C.B. has resolved that the Borough Surveyor prepare and submit detailed plans for the extension of the offices at the rear of the Guildhall for the accommodation of the Borough Treasurer's Department, in accordance with scheme approved by the Council.

PLYMOUTH.—The C.B. has resolved that a site at the Laira Recreation ground be appropriated for the Electricity and Street lighting Undertaking for the purpose of the erection of a transformer station.

PLYMOUTH.—Application is to be made to the Minister of Health for sanction to borrow £3,500 for the extension of the culvert at Pennycomequick from the North-rd. Section to Ford Park-rd.

PLYMOUTH.—Sanction of the Electricity Commissioners has been received to the borrowing of the sum of £20,918, for the purpose of the St. Budeaux and Swilly supplies.

RAVENSTHORPE.—The Board of Education has approved the plans for the erection of a new Council School at Ravensthorpe, and sanctioned an expenditure not to exceed £27,235. The plans provide accommodation for 300 senior and 300 junior scholars.

RAWDON.—£3,000 alterations are to be put in hand on the Temperance hall, to convert it to an up-to-date theatre. Joe Hodgson's Agency, Bradford.

RETFORD.—The Town Council has agreed to the recommendations of the Electricity Committee that application should be made to the Electricity Commissioners for sanction to obtain loans amounting to £18,000 for further development of the Corporation's electricity undertaking.

ROTHWELL.—The Building Committee of the U.D.C. approved the following plans: H. Wood, house, Melbourne-yd., Rothwell; A. & H. Austwick, 2 semi-detached houses, Leadwell-la., Robin Hood: estate plan for development of field belonging to Mrs. Elliott, Greenla., Lofthouse.

RUISLIP.—Main road from Greenford to Ealing is to be widened to 60 feet.

SCARBOROUGH.—Ministry of Health has approved the borrowing by the Council of the sums of £4,821 and £311 in respect of the road drainage and lay-out works, shelters and wire fencing in connection with the new North Cliff 18 holes golf course. The plans of the new Club House at £7,500 have also been approved. The Borough Engineer has been instructed to obtain tenders, the work to be commenced as soon as possible.

SEFTON.—The following buildings plans were submitted to the R.D.C. and approved:—Amended plans of the rebuilding of the Sefton Arms, Carr-lane, West Derby Rural; alterations and additions of lavatories to Royal Standard Hotel, West Derby Rural; three pairs semi-detached houses to be built on land belonging to the British Enka Artificial Silk Factory, Aintree, for the use of their staff; and shop to be built on the Preston Main road, opposite the Racecourse, Aintree.

SHEFFIELD.—The Yellow Lion Hotel, Haymarket, Sheffield, which stands in one of the most prominent shopping centres of the city, will probably shortly be converted into shop and business premises.

SHEFFIELD.—The growth of Ecclesall district has made it necessary for the Post Office to build a new sorting office to serve that area. Office is to be on Ecclesall-rd., near Greystones Picture Palcea.

SKEGBY.—It was decided at a recent R.D.C. meeting to apply for sanction to erect 30 additional houses at Skegby.

SOUTH SHIELDS.—Regarding the erection of a new fire-station and policemen's houses, the amended estimate of the architects (Messrs. T. A. Page & Son) is £19,200 for the complete scheme, and £12,200 for a curtailed one.

SOYLAND.—The U.D.C. has decided to build a further batch of subsidy houses at a cost of £575 each.

SOWERBY.—Plans submitted by W. & R. K. Lee Ltd., for extensions to their offices were approved by the U.D.C.

STORRINGTON.—The Post Office District Surveyor at Portsmouth advertises for premises for reconstruction into a telephone exchange, and for a site on which to build a new exchange.

SUTTON.—Plans were passed by U.D.C. for 14 houses in Ridge-rd., for H. C. Edgar; 2 houses in Grennell-rd., for W. Hawker; the new secondary school for boys in Manor-la., for the Surrey Education Committee; 8 shops and maisonetes and 12 garages at 284-298, High-st., for Arthur C. Geen; five shops, Nos. 149-157, High-st., for L. G. Hartley; a house in the Downsway for R. S. Deacon; 4 houses in Grennell-rd., for A. H. Lovatt; a mission hall at the corner of Vernon and St. Barnabas'-rds., for H. M. Messenger; a house at 21, The Downsway, for A. H. Room; and 46 houses in Hillview-rd.

TORQUAY.—The Corporation are to provide a sun lounge at a cost of £3,000. They have also asked a committee to consider sites suitable for a proposed municipal aerodrome.

TORQUAY.—The Town Council has given instructions to its Entertainment Committee to prepare a scheme for the erection of a covered building on the sea front which can be used for band concerts in inclement weather during the summer and a rendezvous during the winter season.

WALLASEY.—The £5,670 bequeathed to the Wallasey Central Hospital by the late Mr. Fletcher Rogers is to be devoted to the building fund of the new nurses' home.

WALLSEND.—A recommendation of the Sanitary Committee to build 12 two-roomed houses in flats in Tyne View-terr. was approved.

WARRINGTON.—The C.B. has resolved that application be made to the Ministry of Health for their sanction to the borrowing of the sum of £3,513 14s. 11d. for the setting back of the cemetery wall and re-erecting same in concrete and iron railings; also that new railings be erected from the entrance to Victoria Park to Black Bear Bridge at an estimated cost of £900, and that application be made to the Minister of Health for sanction to the borrowing of the necessary money.

WATERFORD.—The Ministry of Industry and Commerce, Dublin, has written to Waterford Harbour Board giving permission for the board to invite tenders for the construction of a new wharf and other improvements, towards which the Ministry would sanction a guarantee for a loan of about £50,000.

WHITBY.—An important portion of the late Sir George Elliot's West Cliff Estate has been acquired by the U.D.C. The principal portion of the ground is to be developed for purposes of recreation, and other portions will be sold for building sites.

NEW BUILDINGS IN SCOTLAND

Glasgow.—New College.—The Governors of the West of Scotland Agricultural College have decided to acquire a site at Pollok, Glasgow, for a new college, dairy school, etc., from Sir John Stirling Maxwell, at a price of £25,000. The whole cost of the scheme will amount to about £150,000.

Edinburgh.—Building Work.—The Housing Committee of the City Council propose to erect 388 houses on their Prestonfield Housing area. A tender of £111,754 2s. 10d. from Messrs John Hardie & Son has been accepted. A £134,642 contract for houses at Stenhouse Mills area has been shared by Messrs. G. & R. Cousin, 24, Hill-street, and W. Arnot, McLeod & Co., 3, Clifton-terrace. Messrs. Hardie have also secured a £6,344 contract for houses at the Featherstall (Corstorphine) area.

Edinburgh.—Power Station.—The Electricity Committee of the City Council are to erect a new power station at Westbank, Portobello. A £33,867 contract for the mason work of superstructure has been let to John Angus & Sons, while the steelwork—to cost £18,580—is being done by Redpath, Brown & Co.

Alloway Kirk.

At a recent meeting of Ayr Parish Council, intimation was made from H.M. Office of Works that the Ancient Monuments Board of Scotland had decided to schedule Alloway Kirk as a monument the preservation of which is of national importance. Alloway Kirk is the ruined church within the kirkyard at Alloway which will be for ever associated with Burn's poem, "Tam o'Shanter."

A Super Cinema : Manchester.

Plans are well advanced for a new super cinema and café rendezvous at Pendleton, Manchester. The new cinema will be built at the junction of the new Langworthy-road and Eccles Old-road, Pendleton, and the balcony will seat 800 people. The plans have been prepared by Mr. John Knight, of Manchester.

TRADE NEWS

Reconstruction of Piccadilly.

We understand that the concrete foundations of the Piccadilly roadway, which is now being reconstructed, are to be reinforced with B.R.C. Fabric, made by the British Reinforced Concrete Engineering Company, Ltd., Stafford.

Insulating Lumber Conference.

We are informed by Messrs. the Merchant Trading Co., Ltd., of 34, Bishopsgate, E.C.2, that they propose holding a conference of "Celotex" distributors of Great Britain and Ireland, with a view to sounding a new note in trade co-operation and the introduction of a closer relationship in the development in the market of this product. The Conference will be held on November 17 and 18 next, and the company—who will advise specifically at a later date of arrangements—hope that every distributor of their products will attend. A copy of the preliminary announcement, which includes a chart of distributers throughout the U.K., will be sent upon application.

Gas Fire Suites.

Manufacturers have for several years set out to design fireplaces suitable, by their price and size, for use in housing schemes, and notable examples are those two gas-fire suites recently introduced by the Nautilus Fire Co., of 60, Oxford-street, London. These two suites are known as the "F. H." and the "R. H."—designations which distinguish a *flat* hearth and a *raised* hearth, the only difference between the two. Each consists of a high-grade gas fire, with a surround of *English* tiles in any colour, a slabbed or loose hearth, and a mantelpiece of whitewood. The gas fire is of a modern and highly efficient pattern; it burns silently, and is of simple design. The economical burner is of the Radiation patent type. The "F.H." and the "R.H." suites are especially suitable for use with Nautilus Economy Gas Flues. These consist of a series of cast-concrete blocks built into the thickness of the wall, and providing a flue area of 12 in. by 2 in. There is no projecting chimney-breast in the room and no large brick chimney-stack on the roof, and the savings in building costs are, we understand, very considerable.

Ransome Concrete Mixers.

Messrs. Ransomes & Rapier, Ltd., Ipswich, who have been the sole manufacturers of the Ransome concrete mixers since 1907, have recently acquired the selling rights, patents, and goodwill of the Ransome Machinery Co. (1920), Ltd., and will accordingly market the mixers themselves in future.

New Escalator at Waterloo.

A new comb-type escalator was put into service at Waterloo recently. This stairway is one of three which will connect the Hampstead and Bakerloo Tubes with the main-line station. Work on the remaining two escalators is being hurried forward, and it is hoped to have them all in service by October. The four lifts will remain in service. The new escalator—an upward one—adjoins the lifts, and passengers will thus have a choice of either means of transport to the main-line platforms. A new system of concealed lighting has been introduced in the new escalator tunnel. The lamps are supported on pedestal holders fixed in the handrail balustrade and throw their light on to the roof. The escalator is the 76th to be installed on the Underground system.

Port of London Improvement Scheme.

The Port of London Authority, at their recent meeting, placed with Sir Robert McAlpine and Sons the contract for the second portion of the scheme for the improvement of West India and Millwall Docks. The order is for £700,000, and will give employment to 1,000 men. The work consists of the construction of a new entrance lock to the South West India Dock, 590 feet long by 80 feet wide. Messrs. Armstrong, Whitworth and Co. have received the order for three pairs of steel dock gates complete with hydraulic operating machinery for the new 110 ft. entrance at Tilbury. These gates, which are the second largest in Great Britain, will be constructed at the Armstrong Naval Yard.

BUILDING TRADE WAGES IN SCOTLAND.*

The following are the present rates of wages in the building trade in the principal towns of Scotland. Every endeavour is made to ensure accuracy, but we cannot be responsible for errors that may occur :—
